Vego, 2009 Smallholder farmers and pastoralists fulfil an invaluable yet undervalued role in conserving biodiversity They act as guardians of locally adapted livestock breeds that can make use of even marginal environments under tough climatic conditions and therefore are a crucial resource for food security But in addition by sustaining animals on natural vegetation and as part of local ecosystems these communities also make a significant contribution to the conservation of wild biodiversity and of cultural landscapes This publication provides a glimpse into the often intricate knowledge systems that pastoralists and smallholder farmers have developed for the management of their breeds in specific production systems and it also describes the multitude of threats and challenges these often marginalized communities have to cope with *Doctrine for Logistic Support of Joint Operations* United States. Manufacturing and Sustainable Logistics Wilhelm Dangelmaier, Alexander Blecken, Robin Delius, Stefan Klöpfer, 2010-04-12

Intimes of declining economic growth companies have to control their costs more than ever to save resources needed in the future. Regardless of the economic size of the company the processes of production and logistics play a decisive role in stabilizing procedures and avoiding waste. Both are important cost drivers in manufacturing companies and therefore they offer large potential savings. Pervasive networking in the last years has contributed to a hitherto unknown transparency of global markets. This harmonization opened up new possibilities of entering foreign markets for procurement and sales to the companies. The emerging global procurement strategy was understood as a chance to rethink the relocation of existing production facilities to profit from existing differences in price and performance as a resource saving factor. Many companies tended towards a reduction of their vertical integration by outsourcing sections of their value chain. These contracted services of production result in higher transport volumes, increased complexity of supply processes and new requirements on logistic networks. This trend of outsourcing has not stopped but is slowing down noticeably. Additionally there is an increasing proportion of companies restoring business units that were outsourced before. Reasons for turning back decisions are often to be found in missed goals. It is not unusual that important cost factors were disregarded in the original basis of decision making. In the meantime many companies have realized that it is easier to achieve stability of processes and therewith a control of costs by increasing their own contribution to production. Especially in times of under utilized capacities like in the current crisis insourcing can be a strategic option.

Operational Logistics, War and Operations Other Than War: What Applies?, 1995

This study assesses the role of operational logistics in a war environment and in an operations other than war (OOTW) environment by way of conducting a historical analysis of Desert Storm and humanitarian assistance operations in Somalia. A framework of campaign design elements is used to examine how operational logistics was integrated into each operation and to what degree the design elements influenced the logistic support in the particular environment. Three conclusions stem from the research. One: the warfighting concept of operational logistics is transferrable when supporting certain operations other than war missions. The operational logistics functions apply regardless of the environment in which it is executed. Therefore from a functional approach this study supports the idea that the operational level of war is applicable to the OOTW environment. The second conclusion is the construct of applying campaign design elements as criteria for measuring the integration and application of operational logistics was tested and found to be useful. It appears this use of criteria elements can serve as a template for operational logistics efforts both in war and peace provided the functional aspect of the design element vice the doctrinal pure definition be considered when applying it to the different environments. The final implication of this study is it reaffirms that as one progresses up the levels of war the distinction

between strategy and logistics erodes **Systemic Approaches to Strategic Management: Examples from the Automotive Industry** Dima, Ioan Constantin, 2014-09-30 The application of systems theory to today's businesses is a direct result of the enhancements that stem from globalization. In order to remain competitive in the new global environment, companies must alter their managerial methods and strategies. *Systemic Approaches to Strategic Management: Examples from the Automotive Industry* addresses the issues that industrial companies face in the current era of globalization and how the application of systems theory has affected their performance. Highlighting issues such as theoretical approaches of systems theory, production strategies, and organizational structure, this book is a pivotal reference source for practitioners, students, engineers, technicians, business managers, and economists interested in systems theory application in the management of industrial companies.

Operational Logistics: The Need for a Joint Logistics Command, Who is Best for the Job, 2002 As America ventures into the 21st century, the military faces increased responsibilities all over the globe. Military missions cross the entire spectrum of crisis intervention from humanitarian assistance to peace operations to high intensity conflict. This increased responsibility has been coupled with an extensive decrease in force structure. A Collection of Technical Papers, 1986 *Operational Logistics/Role for the Future*, 1994 The Army is preparing to publish a first ever doctrine manual on operational logistics. The draft version of this manual does not provide a template for conducting operational logistics in the future. Instead, it is a culmination of past experience. This analysis examines the question of what role operational logistics will play in the future. To accomplish this, operational logistics is defined within the scope of military operations and developed into a conceptual framework for planning and application. The historical and present application of operational logistics is analyzed by use of 19th and 20th century military operations with the focus on major land campaigns. Using this analysis, three future revolutionary changes impacting operational logistics are identified. These changes involve restructuring from service-oriented to joint logistics forces, balancing the equation of effectiveness and efficiency as the result of microchip technology and driving technology to find a solution for revolutionizing theater ground transportation. Objective-focused theater logistics doctrinal concepts oriented toward 21st century *Operational Naval Logistics* Henry Effingham Eccles, 1950
