Operational Semantics For Timed Systems:

   Operational Semantics for Timed Systems Heinrich Rust,2005-03-31 This monograph is dedicated to a novel approach for uniform modelling of timed and hybrid systems Heinrich Rust presents a time model which allows for both the description of discrete time steps and continuous processes with a dense real number time model The proposed time model is well suited to express synchronicity of events in a real number time model as well as strict causality by using uniform discrete time steps Thus it integrates and reconciles two views of time that are commonly used separately in di erent application domains In many discrete systems time is modelled by discrete steps of uniform length in continuous systems time is seen as a dense ow Themainideatointegratethesedi erentviewsisadiscretizationofthedense real number time structure by using constant in nitesimal time steps within each real number point in time The underlying mathematical structure of this time model is based on concepts of Non standard Analysis as proposed by Abraham Robinson in the 1950s The discrete modelling i e the descr tion of sequential discrete algorithms at di erent abstraction levels is done with Abstract State Machines along the formalisms developed by Yuri Gu vich and temporal logic These ingredients produce a rich formal basis for describing a large variety of systems with quantitative linear time prop ties by seamless integration re nement and embedding of continuous and discrete models into one uniform semantic framework called Non standard Timed Abstract State Machines NTASM   **A Non-standard Approach to Operational Semantics for Timed Systems** ,2004   **Formal Modeling and Analysis of Timed Systems** Martin Fränzle,Nicolas Markey,2016-08-16 This book constitutes the refereed proceedings of the 14th International Conference on Formal Modeling and Analysis of Timed Systems FORMATS 2016 held in Quebec QC Canada in August 2016 The 14 papers presented in this volume were carefully reviewed and selected from 32 initial submissions They are organized in topical sections entitled modeling timed phenomena stochasticity and hybrid control real time verification and synthesis workload analysis   **Formal Modeling and Analysis of Timed Systems** Nathalie Bertrand,Nils Jansen,2020-08-25 This book constitutes the refereed proceedings of the 18th International Conference on Formal Modeling and Analysis of Timed Systems FORMATS 2020 held in Vienna Austria in September 2020 The 16 full papers and 2 short papers presented in this volume were carefully reviewed and selected from 42 submissions The papers focus on topics such as foundations and semantics methods and tools techniques algorithms data structures and software tools for analyzing timed systems and resolving temporal constraints Due to the Corona pandemic this conference was held as a virtual event   *Formal Modeling and Analysis of Timed Systems* Krishnendu Chatterjee,Thomas A. Henzinger,2010-09-07 This volume contains the papers that were presented at the 8th International Conference on Formal Modeling and Analysis of Timed Systems FORMATS 2010 held September 8 10 2010 at IST Institute of Science and Technology Austria in Klosterneuburg Austria The modeling andanalysis oftiming aspects of systems is a keyproblem that has been treated independently in several di erent communities in computer science and related areas Researchers interested in

Lee,Bernhard Rumpe,Bernhard Schätz,2010-10-06 Thetopicof Model BasedEngineeringofReal TimeEmbeddedSystems brings together a challenging problem domain real time embedded systems and a lution domain model based engineering It is also at the forefrontof integrated software and systems engineering as software in this problem domain is an essential tool for system implementation and integration Today real time bedded software plays a crucial role in most advanced technical systems such as airplanes mobile phones and cars and has become the main driver and cilitator for innovation Development evolution veri cation con guration and maintenance of embedded and distributed software nowadays are often serious challenges as drastic increases in complexity can be observed in practice Model based engineering in general and model based software development in particular advocates the notion of using models throughout the development and life cycle of an engineered system Model based software engineering re forces this notion by promoting models not only as the tool of abstraction but also as the tool for veri cation implementation testing and maintenance The application of such model based engineering techniques to embedded real time systems appears to be a good candidate to tackle some of the problems arising in the problem domain **Formal Modeling and Analysis of Timed Systems** Kim G.
