Building Sustainable Information Systems Henry Linger,Julie Fisher,Andrew Barnden,Chris Barry,Michael Lang,Christoph Schneider,2013-11-08 Information Systems IS as a discipline draws on diverse areas including technology organisational theory management and social science The field is recognized as very broad and encompassing many themes and areas However the development of artefacts or information systems development ISD in the broadest sense

is a central concern of the discipline. Significantly, ISD impacts on the organisational and societal contexts through the use of the artefacts constructed by the development. Today, that impact also needs to be evaluated in terms of its effects on the environment. Sustainable or green IT is a catch-all term used to describe the development, manufacture, management, use, and disposal of ICT in a way that minimizes damage to the environment. As a result, the term has many different meanings depending on the role assumed in the life span of the ICT artefact. The theme of the proposed work is to critically examine the whole range of issues around ISD from the perspective of sustainability. Sustainable IT is an emerging theme in academic research and industry practice in response to an individual concern for the environment and the embryonic regulatory environments being enacted globally to address the environmental impact of ICT. In this work, we intend to bring together in one volume the diverse research around the development of sustainable IS.
