Operations Research: Process and Strategy David S. Stoller, 1964 A brief history of operations research and a discussion of the nature of operations research problems Preface

Operations Research and Artificial Intelligence: The Integration of Problem-Solving Strategies Donald E. Brown, Chelsea C. White III, 2012-12-06 The purpose of this book is to introduce and explain research at the boundary between two fields that view problem solving from different perspectives Researchers in operations research and artificial intelligence have traditionally remained separate in their activities Recently there has been an explosion of work at the border of the two fields as members of both communities seek to leverage their activities and resolve problems that remain intractable to pure operations research or artificial intelligence techniques This book presents representative results from this current flurry of activity and provides insights into promising directions for continued exploration This book should be of special interest to researchers in artificial intelligence and operations research because it exposes a number of applications and techniques which have benefited from the integration of problem solving strategies Even researchers working on different applications or with different techniques can benefit from the descriptions contained here because they provide insight into effective methods for combining approaches from the two fields Additionally researchers in both communities will find a wealth of pointers to challenging new problems and potential opportunities that exist at the interface between operations research and artificial intelligence In addition to the obvious interest the book should have for members of the operations research and artificial intelligence communities the papers here are also relevant to members of other research communities and development activities that can benefit from improvements to fundamental problem solving approaches

Applied Statistics Lothar Sachs, 2012-12-06 This outline of statistics as an aid in decision making will introduce a reader with limited mathematical background to the most important modern statistical methods This is a revised and enlarged version with major extensions and additions of my *Angewandte Statistik* 5th ed which has proved useful for research workers and for consulting statisticians Applied statistics is at the same time a collection of applicable statistical methods and the application of these methods to measured and or counted observations Abstract mathematical concepts and derivations are avoided Special emphasis is placed on the basic principles of statistical formulation and on the explanation of the conditions under which a certain formula or a certain test is valid Preference is given to consideration of the analysis of small sized samples and of distribution free methods As a text and reference this book is written for non mathematicians in particular for technicians engineers executives students physicians as well as researchers in other disciplines It gives any mathematician interested in the practical uses of statistics a general account of the subject Practical application is the main theme thus an essential part of the book consists in the 440 fully worked out numerical examples some of which are very simple the 57 exercises with solutions a number of different computational aids and an extensive bibliography and a very detailed index In particular a collection of 232 mathematical and mathematical

Strategic Supply Chain Management in Process Industries Reinhard Hübner, 2007-06-13 More and more often practitioners in process industry have to adapt their global production networks to changes in the competitive environment A majority of the supply network design models proposed by academia does not sufficiently capture the economic and technical questions that have to be resolved This work seeks to provide the necessary operations research decision support tools It builds on the example of specialty chemicals industry which faces a strong increase of competitive pressure and historically grown production networks that typically lack a coherent design strategy Decision makers have to define a global production network re design strategy Therefore the book proposes a planning process split into the two phases global production network optimization and individual site selection To support the former a comprehensive Mixed Integer Linear Programming model is proposed while an approach based on the Analytic Hierarchy Process is suggested for the latter Findings from a case study demonstrate the applicability of OR methods to real world production networks

Operations Research and Decision Aid Methodologies in Traffic and Transportation Management Martine Labbe, Gilbert Laporte, Katalin Tanczos, Philippe Toint, 2013-06-29 Every one relies on some kind of transportation system nearly every day Go ing to work shopping dropping children at school and many other cultural or social activities imply leaving home and using some form of transportation which we expect to be efficient and reliable Of course efficiency and reliability do not occur by chance but require careful and often relatively complex planning by transportation system managers both in the public and private sectors It has long been recognized that mathematics and more specifically operations research is an important tool of this planning process However the range of skills required to cover both fields even partially is very large and the opportunities to gather people with this very diverse expertise are too few The organization of the NATO Advanced Studies Institute on Operations Research and Decision Aid Methodologies in Traffic and Transportation Management in March 1997 in Balatonf red Hungary was therefore more than welcome and the group of people that gathered for a very studious two weeks on the shores of the beautiful lake Balaton did really enjoy the truly multidisciplinary and high scientific level of the meeting The purpose of the present volume is to report in a chronological order the various questions that were considered by the lecturers and the students at the institute After a general introduction to the topic the first week focused on issues related to traffic modeling mostly in an urban context
