Development Factory Gary P. Pisano,1997 When the pharmaceuticals giant Merck reports promising results for a potential blockbuster drug the story makes the evening news Now at a time when new product development has become critical to success in so many industries The Development Factory proves that process innovation not just product innovation can be the key to competitive edge In this multiyear study of pharmaceutical and biotechnology firms Gary Pisano explores the dynamics of superior product and process development in a highly competitive industry that lives and dies by its R D and depends heavily on rapid time to market His work reveals that behind the success of many new product introductions lies the development of novel process technologies that provide lower costs higher quality and increased flexibility Pisano challenges the widely held product process life cycle view of competition which suggests that industries tend to emphasize either product innovation or process innovation He also questions the notion that there is a conflict between pursuit of product innovation and pursuit of lower costs arguing that product development and process development capabilities are complementary Extending the lessons to a wide variety of manufacturing industries The Development Factory will guide companies toward unlocking the potential of process development and understanding the patterns of organizational behavior and managerial actions that help create and implement new capabilities over time

Management under Uncertainty Jaime Gil-Aluja,2013-12-01 A mere few years ago it would have seemed odd to propose a Handbook on the treatment of management problems within a sphere of uncertainty Even today on the threshold of the third millennium this statement may provoke a certain wariness In fact to resort to exact or random data that is probable date is quite normal and convenient as we then know where we are going best where we are proposing to go if all occurs as it is conceived and hoped for To treat uncertain information to accept a new principle and from there determined criteria without being sure of oneself and confiding only in the will to better understand objects and phenomena constitutes and compromise with a new form of understanding the behaviour of current beings that goes even further than simple rationality Economic Science and particularly the use of its elements of configuration in the world of management has imbued several generations with an analytical spirit that has given rise to the elaboration of theories widely accepted by the international scientific community In this work we are proposing something a little more modest to use in the best possible way data and information that are available for drawing up and applying techniques and instruments that are useful for current reality within the world of businesses and institutions in an attempt to mislead ourselves as little as possible **New**
