Policy Studies: Review Annual Bruce B. Zellner, 2019-01-22 Every editor of the Policy Studies Review Annual brings a unique perspective to bear in selecting articles to be included This perspective reflects varying methodological and disciplinary judgments varying judgments on what the field of policy studies or policy analysis is and where it should be going and varying judgments regarding the quality of articles which are or claim to be in the field Because it is the objective to assemble a set of essays which are both interesting and topical there will be varying perspectives on these matters as well The volume clearly reflects the editors perspectives They are explicit about these judgments and perspectives and then let the content of the volume speak for itself First we are both economists As a result the general topics selected and the articles chosen under each topic tend to emphasize economics more than the other disciplines involved in the field of policy studies sociology psychology political science law and so on This emphasis is clearly seen by comparing the contents of volume I edited by Stuart Nagel a

political scientist and volume II edited by Howard Freeman a sociologist with that of this volume Second the editors have a particular view of what policy studies or policy analysis is That view has several aspects In the first place they feel that the field of policy studies or policy analysis must define itself and this definition will develop as researchers do just what the title of the field says study or analyze policies A corollary of this view is that we place a low weight on papers which discuss the policy process or reforms in policy making relative to papers which analyze a policy a policy proposal or a problem which leads to calls for policy action

The Scientific Life Steven Shapin, 2009-08-01 Who are scientists What kind of people are they What capacities and virtues are thought to stand behind their considerable authority They are experts indeed

highly respected experts authorized to describe and interpret the natural world and widely trusted to help transform knowledge into power and profit But are they morally different from other people The Scientific Life is historian Steven Shapin s story about who scientists are who we think they are and why our sensibilities about such things matter Conventional wisdom has long held that scientists are neither better nor worse than anyone else that personal virtue does not necessarily accompany technical expertise and that scientific practice is profoundly impersonal Shapin however here shows how the uncertainties attending scientific research make the virtues of individual researchers intrinsic to scientific work From the early twentieth century origins of corporate research laboratories to the high flying scientific entrepreneurship of the present Shapin argues that the radical uncertainties of much contemporary science have made personal virtues more central to its practice than ever before and he also reveals how radically novel aspects of late modern science have unexpectedly deep historical roots His elegantly conceived history of the scientific career and character ultimately encourages us to reconsider the very nature of the technical and moral worlds in which we now live Building on the insights of Shapin s last three influential books featuring an utterly fascinating cast of characters and brimming with bold and original claims The Scientific Life is essential reading for anyone wanting to reflect on late modern American culture and how it has been shaped
