Schur Functions, Operator Colligations, and Reproducing Kernel Pontryagin Spaces Daniel Alpay, Aad Dijksma, James Rovnyak, Hendrik de Snoo, 2012-12-06 Generalized Schur functions are scalar or operator valued holomorphic functions such that certain associated kernels have a finite number of negative squares This book develops the realization theory of such functions as characteristic functions of coisometric isometric and unitary colligations whose state spaces are reproducing kernel Pontryagin spaces This provides a modern system theory setting for the relationship between invariant subspaces and factorization operator models Krein Langer factorizations and other topics The book is intended for students and researchers in mathematics and engineering An introductory chapter supplies background material including reproducing kernel Pontryagin spaces complementary spaces in the sense of de Branges and a key result on defining operators as closures of linear relations The presentation is self contained and streamlined so that the indefinite case is handled completely parallel to the definite case Lectures on Gaussian Integral Operators and Classical Groups Yu. A. Neretin, 2011 This book is an elementary self contained introduction to some constructions of representation theory and related topics of differential geometry and analysis Topics covered include the theory of various Fourier like integral operators such as Segal Bargmann transforms Gaussian integral operators in L^2 and in the Fock space integral operators with theta kernels the geometry of real and p -adic classical groups and symmetric spaces The heart of the book is the Weil representation of the symplectic group real and complex realizations relations with theta functions and modular forms p -adic and adelic constructions and representations in Hilbert spaces of holomorphic functions of several complex variables This book is addressed to graduate students and researchers in representation theory differential geometry and operator theory Prerequisites are standard university courses in linear algebra functional analysis and complex analysis **Special Classes of Linear Operators and Other Topics** G. Arsene, Helson, 2012-12-06 The Operator Theory conferences organized by the Department of Mathematics of INCREST and the University of Timi oara are conceived as a means to promote cooperation and exchange of information between specialists in all areas of operator theory This volume consists of a careful selection of papers contributed by the participants of the 1986 Conference They reflect most of the topics dealt with by the modern operator theory including recent advances in dual operator algebras and the invariant subspace problem operators in indefinite metric spaces hyponormal quasi triangular and decomposable operators various problems in C and W algebras and so on The research contracts of the Department of Mathematics of INCREST with the National Council for Science and Technology of Romania provided the means for developing the research activity in mathematics they represent the generous framework of these meetings too It is our pleasure to acknowledge the financial support of UNESCO which also contributed

to the success of this meeting We are indebted to Professor Israel Gohberg for including these Proceedings in the OT Series and for valuable advice in the editing process Birkhäuser Verlag was very cooperative in publishing this volume Camelia Minculescu Iren Nemethi and Rodica Stoenescu dealt with the difficult task of typing the whole manuscript using a Rank Xerox 860 word processor we thank them for the excellent job they did

Kaashoek, Alfonso Montes Rodríguez, Sergei Treil, 2013-11-04 This book contains a collection of research articles and surveys on recent developments on operator theory as well as its applications covered in the IWOTA 2011 conference held at Sevilla University in the summer of 2011 The topics include spectral theory differential operators integral operators composition operators Toeplitz operators and more The book also presents a large number of techniques in operator theory Operator Theory and Complex Analysis J. K. Aggarwal, 1993-01-22 This volume presents a set of papers based on the proceedings of the NATO Advanced Research Workshop on Multisensor Fusion for Computer Vision held in Grenoble France in June 1989 The workshop focused on the fusion or integration of sensor information to achieve the optimum interpretation of a scene The papers cover a broad range of topics including principles and issues in multisensor fusion information fusion for navigation multisensor fusion for object recognition network approaches to multisensor fusion computer architectures for multisensor fusion and applications of multisensor fusion The authors have documented their own research and in so doing have

presented the state of the art in the field Each author is a recognized leader in his or her area in the academic governmental or industrial research community Several contributors present novel points of view on the integration of information The book gives a representative picture of current progress in multisensor fusion for computer vision among the leading research groups in Europe and North America *Operator Methods for Boundary Value Problems* Seppo Hassi,Hendrik S. V. de Snoo,Franciszek Hugon Szafraniec,2012-10-11 Presented in this volume are a number of new results concerning the extension theory and spectral theory of unbounded operators using the recent notions of boundary triplets and boundary relations This approach relies on linear single valued and multi valued maps isometric in a Krein space sense and offers a basic framework for recent developments in system theory Central to the theory are analytic tools such as Weyl functions including Titchmarsh Weyl m functions and Dirichlet to Neumann maps A wide range of topics is considered in this context from the abstract to the applied including boundary value problems for ordinary and partial differential equations infinite dimensional perturbations local point interactions boundary and passive control state signal systems extension theory of accretive sectorial and symmetric operators and Calkin s abstract boundary conditions This accessible treatment of recent developments written by leading researchers will appeal to a broad range of researchers students and professionals

Characteristic Functions, Scattering Functions and Transfer Functions Daniel Alpay,Victor Vinnikov,2010-01-12 Transfer functions and characteristic functions proved to be key in operator theory and system theory Moshe Livic played a major role in developing these functions and this book of papers dedicated to his memory covers a wide variety of topics in the field *Operator Theory and Complex Analysis* T. Ando,I. Gohberg,2012-12-06 *Analytic Methods of Spectral Representations of Non-Selfadjoint (Non-Unitary) Operators* Vladimir A. Zolotarev,2025-05-03 This book is concerned with the theory of model representations of linear non selfadjoint and non unitary operators This booming area of functional analysis owes its origins to the fundamental works of M S Livic on the theory of characteristic functions the deep studies of B S Nagy and C Foias on dilation theory and also to the Lax Phillips scattering theory Here a uniform conceptual approach is developed which organically unites all these theories New analytic methods are introduced which make it possible to solve some important problems from the theory of spectral representations Aimed at specialists in functional analysis the book will also be accessible to senior mathematics students *Operator Theory, Analysis and Mathematical Physics* Jan Janas,Pavel Kurasov,A. Laptev,Sergei Naboko,Günter Stolz,2007-04-29 This volume contains lectures delivered at the International Conference Operator Theory and its Applications in Mathematical Physics OTAMP 2004 held at the Mathematical Research and Conference Center in Bedlewo near Poznan Poland The idea behind these lectures was to present interesting ramifications of operator methods in current research of mathematical physics **Current Trends in Operator Theory and its Applications** Joseph A. Ball,J. William Helton,Martin Klaus,Leiba Rodman,2012-12-06 Many developments on the cutting edge of research in operator theory and its applications are reflected in this collection of original and review articles

Particular emphasis lies on highlighting the interplay between operator theory and applications from other areas such as multi dimensional systems and function theory of several complex variables distributed parameter systems and control theory mathematical physics wavelets and numerical analysis

Conservative Realizations of Herglotz-Nevanlinna Functions Yuri Arlinskii, Sergey Belyi, Eduard Tsekanovskii, 2011-06-21 This book is devoted to conservative realizations of various classes of Stieltjes inverse Stieltjes and general Herglotz Nevanlinna functions as impedance functions of linear systems The main feature of the monograph is a new approach to the realization theory profoundly involving developed extension theory in triplets of rigged Hilbert spaces and unbounded operators as state space operators of linear systems The connections of the realization theory to systems with accretive sectorial and contractive state space operators as well as to the Phillips Kato sectorial extension problem the Krein von Neumann and Friedrichs extremal extensions are provided Among other results the book contains applications to the inverse problems for linear systems with non self adjoint Schrödinger operators Jacobi matrices and to the Nevanlinna Pick system interpolation

Extensions of Positive Definite Functions Palle Jorgensen, Steen Pedersen, Feng Tian, 2016-07-08 This monograph deals with the mathematics of extending given partial data sets obtained from experiments Experimentalists frequently gather spectral data when the observed data is limited e g by the precision of instruments or by other limiting external factors Here the limited information is a restriction and the extensions take the form of full positive definite function on some prescribed group It is therefore both an art and a science to produce solid conclusions from restricted or limited data While the theory of is important in many areas of pure and applied mathematics it is difficult for students and for the novice to the field to find accessible presentations which cover all relevant points of view as well as stressing common ideas and interconnections We have aimed at filling this gap and we have stressed hands on examples

Contributions to Operator Theory in Spaces with an Indefinite Metric Aad Dijksma, Israel Gohberg, Marinus A. Kaashoek, Reinhard Mennicken, 2012-12-06 This volume is dedicated to Heinz Langer a leading expert in spectral analysis and its applications in particular to operators in spaces with an indefinite metric on the occasion of his 60th birthday The book begins with his biography and list of publications It contains a selection of research papers most of which are devoted to spectral analysis of operators or operator pencils with applications to ordinary and partial differential equations Other papers deal with time varying systems interpolation and factorization problems and topics from mathematical physics About half of the papers contain further developments in the theory of operators in spaces with an indefinite metric and treat new applications The book is of interest to a wide audience of pure and applied mathematicians
