Thomas, 2006-09-07 A typical optical system is composed of three basic components a source a detector and a medium in which the optical energy propagates Many textbooks cover sources and detectors but very few cover propagation in a comprehensive way incorporating the latest progress in theory and experiment concerning the propagating medium This book fulfills that need It is the first comprehensive and self contained book on this topic It is useful reference book for researchers and a textbook for courses like Laser Light Propagation Solid State Optics and Optical Propagation in the Atmosphere

Development of High-temperature Strain Gages J. W. Pitts, Dwight Garrison Moore, 1961 A summary is presented of a research program aimed at the improvement of high temperature strain gages of the electrical resistance type Potential ceramic and metal components were evaluated and a gage was devised that was based on these evaluations This gage NBS 5B was flexible and easy to install however it lacked resistance stability at higher temperatures In an attempt to minimize this deficiency ceramic cements were developed that showed greater electrical resistivity than had been previously observed in the range 800 to 1800 degrees Fahrenheit also a technique was devised for increasing the resistance to ground by applying a fired on ceramic coating to the grid of a specifically developed unbacked gage A study was made of the cause of the erratic response of cemented gages that had not been preheated prior to use There were strong indications that the erratic response was caused mostly by the rapid decrease in resistance that accompanied structural changes in the cement
