*Laser Theory* Hermann Haken, 2012-12-06 This book written by one of the pioneers of laser theory is now considered a classic by many laser physicists Originally published in the prestigious Encyclopedia of Physics series it is now being republished in paperback to make it available not only to professors and scientists but also to students It presents a thorough treatment of the theory of laser resonators the quantum theory of coherence and the quantization of electromagnetic fields

Especial emphasis is placed on the quantum mechanical treatment of laser light by means of quantum mechanical Langevin equations the density matrix equation and the Fokker Planck equation The semiclassical approach and the rate equation approach are also presented The principles underlying these approaches are used to derive the relevant equations from which in turn the various properties of laser light are derived Preface The concept of the laser came into existence more than a decade ago when SCHAWLOW and TOWNES showed that the maser principle could be extended to the optical region Since then this field has developed at an incredible pace which hardly anybody could have foreseen The laser turned out to be a meeting place for such different disciplines as optics e g spectroscopy optical pumping radio engineering solid state physics gas discharge physics and many other fields The underlying structure of the laser theory is rather simple

**Light and Matter Ic / Licht und Materie Ic** Hermann Haken, 2013-06-29 The concept of the laser came into existence more than a decade ago when SCHAWLOW and TOWNES showed that the maser principle could be extended to the optical region Since then this field has developed at an incredible pace which hardly anybody could have foreseen The laser turned out to be a meeting place for such different disciplines as optics e g spectroscopy optical pumping radio engineering solid state physics gas discharge physics and many other fields The underlying structure of the laser theory is rather simple The main questions are what are the light intensities a what are the frequencies b what fluctuations occur c or in other words what are the coherence properties Roughly speaking these questions are treated by means of the rate equations a the semiclassical equations b and the fully quantum mechanical equations c respectively The corresponding chapters are written in such a way that they can be read independently from each other For more details about how to proceed the reader is advised to consult Chap I 4
