Path Routing in Mesh Optical Networks Eric Bouillet, Georgios Ellinas, Jean-Francois Labourdette, Ramu Ramamurthy, 2007-10-24 Transport networks evolved from DCS Digital Cross connect Systems based mesh architectures to SONET SDH Synchronous Optical Networking Synchronous Digital Hierarchy ring architectures in the 1990 s In the past few years technological advancements in optical transport switches have allowed service providers to support the same fast recovery in mesh networks previously available in ring networks while achieving better capacity efficiency and resulting in lower capital cost Optical transport networks today not only provide trunking capacity to higher layer networks such as inter router connectivity in an IP centric infrastructure but also support efficient routing and fast failure recovery of high bandwidth services This is possible due to the emergence of optical network elements that have the intelligence required to efficiently control the network Optical mesh networks will enable a variety of dynamic services such as bandwidth on demand Just In Time bandwidth bandwidth scheduling bandwidth brokering and optical virtual private networks that open up new opportunities for service providers and their customers alike Path Routing in Mesh Optical Networks combines both theoretical as well as practical aspects of routing and dimensioning for mesh optical networks All authors have worked as technical leaders for the equipment vendor Tellium who implemented such capabilities in its product and whose product was deployed in service provider networks Path Routing in Mesh Optical Networks Presents an in depth treatment of a specific class of optical networks i e path oriented mesh optical networks Focuses on routing and recovery dimensioning performance analysis and availability in mesh optical networks Explains and analyses routing specifically associated with Dedicated Backup Path Protection DBPP and Shared Backup Path Protection SBPP recovery architectures As most of the core backbone networks evolve to mesh topologies utilizing intelligent network elements for provisioning and recovery of services Path Routing in Mesh Optical Networks will be an invaluable tool for both researchers and engineers in the industry who are responsible for designing developing deploying and maintaining mesh optical networks It will also be a useful reference book for graduate students and university professors who are interested in optical networks or telecommunications networking With a foreword by Professor Wayne D Grover author of the book Mesh Based Survivable Networks

Volume 37: Passive Optical Networks, *Next Generation Intelligent Optical Networks* Stamatios Kartalopoulos, 2007-11-24 Optical networks have been in commercial deployment since the early 1980s as a result of advances in optical photonic and material

technologies Although the initial deployment was based on silica ber with a single wavelength modulated at low data rates it was quickly demonstrated that ber can deliver much more bandwidth than any other transmission medium twisted pair wire coaxial cable or wireless Since then the optical network evolved to include more exciting technologies gratings optical lters optical multiplexers and optical ampli ers so that today a single ber can transport an unprecedented aggregate data rate that exceeds Tbps and this is not the upper limit yet Thus the ber optic network has been the network of choice and it is expected to remain so for many generationsto come for both synchronousand asynchronouspayloads voice data video interactive video games music text and more In the last few years we have also witnessed an increase in network attacks as a result of store andforwardcomputer basednodes These attackshave manymaliciousobjectives harvestsomeone else s data impersonate another user cause denial of service destroy les and more As a result a new eld in communicationis becomingimportant communicationnetworksand informationse rity In fact the network architect and system designer is currently challenged to include enhanced features such as intruder detection service restoration and countermeasures intruder avoidance and so on In all the next generation optical network is intelligent and able to detect and outsmart malicious intruders

Optical Networks and Technologies Ken-ichi Kitayama,Francesco Masetti-Placci,Giancarlo Prati,2006-03-12 There has continuously been a massive growth of Internet traffic for these years despite the bubble burst in year 2000 As the telecom market is gradually picking up it would be a consensus in telecom and data com industries that the CAPEX Capital Expenditures to rebuild the network infrastructure to cope with this traffic growth would be imminent while the OPEX Operational Expenditures has to be within a tight constraint Therefore the newly built 2r century network has to fully evolve from voice oriented legacy networks not only by increasing the transmission capacity of WDM links but also by introducing switching technologies in optical domain to provide full connectivity to support a wide variety of services This book stems

from the technical contributions presented at the Optical Networks and Technology Conference OpNeTec inaugurated this year 2004 in Pisa Italy and collects innovations of optical network technologies toward the 21st century network High quality recent research results on optical networks and related technologies are presented including IP over WDM integration burst and packet switchings control and managements operation metro and access networks and components and devices in the perspective of network application An effort has been made throughout the conference hopefully reflected at least partially in this book to bring together researchers scientists and engineers working both academia and industries to discuss the relative impact of networks on technologies and vice versa with a vision of the future
