Optical Processes In Microcavities:

Optical Processes in Microcavities Richard Kounai Chang, Anthony J. Campillo, 1996 The dielectric microstructures act as ultrahigh Q factors optical cavities which modify the spontaneous emission rates and alter the spatial distributions of the input and output radiation The editors have selected leading scientists who have made seminal contributions in different aspects of optical processes in microcavities Every attempt has been made to unify the underlying physics pertaining to microcavities of various shapes This book begins with a chapter on the role of microcavity modes with additional chapters on how these microcavity modes affect the spontaneous and stimulated emission rates enhance nonlinear optical processes used in cavity QED and chemical physics experiments aid in single molecule detection influence the design of microdisk semiconductor lasers and how deformed cavities can be treated with classical chaos theory *Progress in Optics* Emil Wolf, 2000-12-13 Progress in Optics Volume 41 Optical Processes in Semiconductor Microcavities, 2000 The final technical report for grant F49620 96 10310 summarizes research performed on optical processes in semiconductor microcavities This research program has led to new understanding on nonlinear optical processes in the nonperturbative regime in semiconductor microcavities and to the development of a novel microcavity that can combine extreme photonic confinement in fused silica microspheres with electronic confinement in semiconductor nanostructures **Optical Processes in High-Q Semiconductor Microcavities**, 2004 This final progress report summarizes research efforts in two areas cavity QED of quantum dots and electromagnetically induced transparency EIT in GaAs quantum wells Cavity QED studies are based on the development of a composite nanocrystal microsphere system in which CdSe ZnS core shell nanocrystals couple to whispering gallery modes WGMs in a fused silica microsphere The composite microcavity system can feature a Q factor as high as 108 and a nanocrystal decoherence rate as small as 3 microneV 0 75 GHz indicating that the composite system can in principle reach the strong coupling regime of cavity QED EIT studies have exploited the use of Coulomb interactions between excitons to induce and manipulate exciton spin coherence and biexciton coherence These studies have led to the first experimental demonstration of EIT in inter band optical transitions in semiconductors in A type cascaded and V type three level systems **Frontiers In Electronics: From Materials To Systems, 1999 Workshop On Frontiers In Electronics** Serge Luryi, Yoon Soo Park, Michael S Shur, Jimmy Xu, Alexander Zaslavsky, 2000-08-07 The rapid pace of the electronic technology evolution compels a merger of technical areas such as low power digital electronics microwave power circuits optoelectronics etc which collectively have become the foundation of today's electronic technology The 1999 Workshop on Frontiers in Electronics gathered experts from academia industry and government agencies to review the recent exciting breakthroughs and their underlying physical mechanisms The proceedings addresses controversial issues provocative views and visionary outlooks Also included are discussions on the future trends the directions of electronics technology and the market pulls as well as the necessary policy and infrastructure changes **Confined Electrons and**

Photons Elias Burstein, Claude Weisbuch, 2012-12-06 The optical properties of semiconductors have played an important role since the identification of semiconductors as small bandgap materials in the thirties due both to their fundamental interest as a class of solids having specific optical properties and to their many important applications On the former aspect we can cite the fundamental edge absorption and its assignment to direct or indirect transitions many body effects as revealed by exciton formation and photoconductivity On the latter aspect large scale applications such as LEDs and lasers photovoltaic converters photodetectors electro optics and non linear optic devices come to mind The eighties saw a revitalization of the whole field due to the advent of heterostructures of lower dimensionality mainly two dimensional quantum wells which through their enhanced photon matter interaction yielded new devices with unsurpassed performance Although many of the basic phenomena were evidenced through the seventies it was this impact on applications which in turn led to such a massive investment in fabrication tools thanks to which many new structures and materials were studied yielding further advances in fundamental physics
