Photonic Neural Networks with Spatiotemporal Dynamics Hideyuki Suzuki, Jun Tanida, Masanori Hashimoto, 2023-10-16

This open access book presents an overview of recent advances in photonic neural networks with spatiotemporal dynamics. The computing and implementation paradigms presented in this book are outcomes of interdisciplinary studies by collaborative researchers from the three fields of nonlinear mathematical science, information photonics and integrated systems engineering. This book offers novel multidisciplinary viewpoints on photonic neural networks illustrating recent advances in three types of computing methodologies: fluorescence energy transfer computing, spatial photonic spin system and photonic reservoir computing. The book consists of four parts. Part I introduces the backgrounds of optical computing and neural network dynamics. Part II presents fluorescence energy transfer computing, a novel computing technology based on nanoscale networks of fluorescent particles. Parts III and IV review the models and implementation of spatial photonic spin systems and photonic reservoir computing respectively. These contents are beneficial to researchers in a broad range of fields including information science, mathematical science, applied physics and engineering to better understand the novel computing concepts of photonic neural networks with spatiotemporal dynamics.

Applications of Lasers and Holography Winston Kock, 2013-06-29 This book is intended for upperclass college students as an introduction to the growing field of coherent optics and to the increasing number of its applications and also for those versed in other fields who wish to gain perspective and insight without detailed calculations. It is an outgrowth of the author's Science Study Series book *Lasers and Holography*. Besides being an updated and expanded version of that book, it includes discussions of numerous recent applications. It differs in its slightly higher analytical level and in the inclusion of large numbers of references which enable the reader to obtain further information on subjects of interest to him. The level was selected to match the capabilities of students in their middle college years so as to permit them to make an early assessment of possible career interests in any of the many interdisciplinary fields now embracing the technologies of modern optics. It is hoped that the book can be used as has occurred rather extensively with another of the author's Science Study Series books *Sound Waves and Light Waves* as an auxiliary reading assignment for students in various disciplines. The author strongly believes that the promise of continued growth in this field as evidenced by the extensive participation in technology developments by industry both within the U S and abroad identifies the subject as Doubleday 1969 hard cover and paperback.
