Politics Of Genetic Resource Contro:

The Politics of Genetic Resource Control A. Stenson,T. Gray,1999-06-23 The question of how genetic resources ought to be owned and controlled has become a controversial international political issue The authors examine this issue from a normative perspective discussing the four principles that govern the debate over genetic resource control These four principles are proprietary intellectual property rights the dominant principle reflecting Western influences communitarian intellectual property rights a principle bound up with the rights of indigenous peoples national sovereignty the principle at the heart of international law and common heritage of mankind the most recent principle reflecting Third World demands

A Normative Analysis of the Politics of Genetic Resource Control Anthony Stenson,University of Newcastle upon Tyne. Department of Politics,1998 Accessing and Sharing the Benefits of the Genomics Revolution Peter W.B.

Phillips,Chika B. Onwuekwe,2007-05-09 There is a veritable gold rush mentality in the life science world as scientists entrepreneurs and multinationals are staking claims to the code of life embodied in the world s current stock of plants animals microbes and human populations This edited volume explores the legal economic and political context for the debate about intellectual property rights for traditional knowledge and genetic resources and critically analyses the theory and practice of access and benefits sharing efforts around the world The book also investigates the current flashpoints the David and Goliath battle between Monsanto and Percy Schmeiser over farmers rights the dispute over coexistence of GM and organic production and the ownership and control of human genetic materials stored in human gene banks around the world

The Oxford Handbook of Comparative Environmental Law Emma Lees,Jorge E. Viñuales,2019-05-06 This Handbook is the first comprehensive account of comparative environmental law It examines in detail the methodological foundations of the discipline as well as the substance of environmental law across countries from four vantage points country studies from all continents responses to common problems including air pollution water management nature conservation genetically modified organisms climate change and energy chemicals waste foundational components of environmental law systems including principles property rights administrative and judicial organisation command and control regulation market mechanisms informational techniques and liability mechanisms and common interactions of environmental protection with the broader public private and criminal law contexts The volume brings together the foremost authorities in this field from around the world to provide a concise self contained and technically rigorous account of environmental law as a single overall system *Philosophy and Biodiversity* Markku Oksanen,Juhani Pietarinen,2004-09-06 This important collection

focuses on the nature and importance of biodiversity The concept is clarified and its intrinsic and instrumental value are discussed Even though the term biodiversity was invented in the 1980s to promote the cause of species conservation discussions on biological diversity go back to Plato There are many controversies surrounding biodiversity and a few of them are examined here What is worthy of protection or restoration and what is the acceptable level of costs Is it permissible to

kill sentient animals to promote native populations Can species be reintroduced if they have disappeared a long time ago How should the responsibilities for biodiversity be shared This book will be of interest to philosophers of science and biologists but also to anyone interested in conservation and the environment *Intellectual Property Rights and Food Security* Michael Blakeney, 2009-01-01 Intellectual Property Rights IPRs play an important role in the struggle for food security and encouraging agricultural research and development This book examines these roles as well as the international relationship between IPRs agricultural biotechnology access to biological resources food security and globalisation paying particular attention to proposals for the protection of Farmers Rights traditional knowledge GM crops and the impact of competition laws It proposes a number of recommendations for action in deploying IPRs in order to reach greater food security globally **Global Biopiracy** Ikechi Mgbeoji, 2011-11-01 Legal control and ownership of plants and traditional knowledge of the uses of plants TKUP is a vexing issue The phenomenon of appropriation of plants and TKUP otherwise known as biopiracy thrives in a cultural milieu where non Western forms of knowledge are systemically marginalized and devalued as folk knowledge or characterized as inferior Global Biopiracy rethinks the role of international law and legal concepts the Western based Eurocentric patent systems of the world and international agricultural research institutions as they affect legal ownership and control of plants and TKUP The analysis is cast in various contexts and examined at multiple levels The first deals with the Eurocentric character of the patent system international law and institutions The second involves the cultural and economic dichotomy between the industrialized Western world and the westernizing developing world The third level of analysis considers the phenomenal loss of human cultures and plant diversity Exhaustively researched and eloquently argued Global Biopiracy sheds new light on a contentious topic The impact of intellectual property law on indigenous peoples and informal or traditional innovations is a field of study that currently includes only a handful of scholars Biopiracy will be an invaluable resource for students teachers and legal practitioners Global Justice and the Politics of Information Sky Croeser, 2014-09-19 The global social justice movement attempts to build a more equitable democratic and environmentally sustainable world However this book argues that actors involved need to recognise knowledge including scientific and technological systems to a greater extent than they presently do The rise of the Occupy movement the Arab Spring and the Wikileaks controversy has demonstrated that the internet can play an important role in helping people to organise against unjust systems While governments may be able to control individual activists they can no longer control the flow of information However the existence of new information and communications technologies does not in itself guarantee that peoples movements will win out against authoritarian governments or the power of economic elites Drawing on extensive interviews and fieldwork this book illustrates the importance of contributions from local movements around the world to the struggle for global justice Including detailed case studies on opposition to genetically modified crops in the south of India and the digital liberties movement this book is vital reading for anyone trying to understand the

changing relationship between science technology and progressive movements around the world This book will be of interest to students and scholars of International Politics Social movements Global Justice and Internet politics Narratives of Hunger in International Law Anne Saab,2019-04-04 This book explores the role that the language of international law plays in constructing understandings or narratives of hunger in the context of climate change The story is told through a specific case study of genetically engineered seeds purportedly made to be climate ready Two narratives of hunger run through the storyline the prevailing neoliberal narrative that focuses on increasing food production and relying on technological innovations and private sector engagement and the oppositional and aspirational food sovereignty narrative that focuses on improving access to and distribution of food and rejects technological innovations and private sector engagement as the best solutions This book argues that the way in which voices in the neoliberal narrative use international law reinforces fundamental assumptions about hunger and climate change and the way in which voices in the food sovereignty narrative use international law fails to question and challenge these assumptions The President and American Capitalism since 1945 Mark H. Rose,Roger Biles,2017-11-14 The book examines the development of the U S presidency since 1945 and describes the many ways some of which are unknown or greatly underappreciated in which the president s actions affect the daily lives of the American people
