Photophysical and Photochemical Tools in Polymer Science Mitchell A. Winnik, 2012-12-06 In 1980 the New York Academy of Sciences sponsored a three day conference on luminescence in biological and synthetic macromolecules After that meeting Professor Frans DeSchryver and I began to discuss the possibility of organizing a different kind of meeting with time for both informal and in depth discussions to examine certain aspects of the application of fluorescence and phosphorescence spectroscopy to polymers Our ideas developed through discussions with many others particularly Professor Lucien Monnerie By 1983 when we submitted our proposal to NATO for an Advanced Study Institute the area had grown enormously It is interesting in retrospect to look back on the points which emerged from these discussions as the basis around which the scientific program would be organized and the speakers chosen We decided early on to focus on applications of these methods to provide information about polymer molecules and polymer systems The topics would all relate to the conformation and dynamics of macromolecules or to the morphology of polymer containing systems Another important decision was to expand the scope of the ASI to include certain photochemical techniques particularly laser flash photolysis These applications were at the time quite new but full of promise as important sources of information about polymers
