Coloma, William E. Duellman, 2025-04-07 This book is the second of four volumes which are comprehensive well illustrated and authoritative works invaluable to biologists conservationists and others It explores in comprehensive detail the rich amphibian diversity of Ecuador providing a thorough review of biogeography amphibian declines and conservation This volume covers Pipidae Telmatobiidae Microhylidae Dendrobatidae Ranidae Bufonidae and Hylidae Characteristics of each species are listed defined and compared to similar other species Reproductive behavior where known is described as are data on vocalizations larvae and ontogenetic changes Amphibian distributions are illustrated with physiographic maps with dots Each volume addresses the declines extinctions and conservation status of each species and provides notations of their occurrence in reserves KEY FEATURES Provides detailed and authoritative accounts for each species in seven families Pipidae Telmatobiidae Microhylidae Dendrobatidae Ranidae Bufonidae and Hylidae New data are incorporated for many species Describes with full color maps the distribution of all known taxa Includes information on the ecology reproduction and behavior of all taxa *Fortschritte der Chemie organischer Naturstoffe / Progress in the Chemistry of Organic Natural Products*, 2012-12-06 The chemistry of condensed tannins has hitherto represented a relatively unattractive and therefore neglected area of study one in which the weight of research effort involved is invariably disproportionate to the results achieved in which the participating schools generally confine their approach to specific molecular species and in which as yet no consensus has been reached regarding likely precursors The problems which beset those engaged in this field represent a combined function of the abnormal complexity of the gradational range of oligomers of increasing mass and affinity for substrates which typify most extracts rich in tannins and the consequent problem of their isolation and purification the high chirality of tannin oligomers the need to contend with the phenomenon of dynamic rotational isomerism about interflavanoid bonds in the ¹H NMR spectral interpretation of their derivatives the lack of precise knowledge regarding the points of bonding at nucleophilic centres and the obvious limitations of a hitherto predominantly analytical approach The last of these reflects the need for a general method of synthesis which permits unambiguous proof of both structure and absolute configuration also at higher oligomeric levels With these objectives in mind we initiated a purely synthetic approach based on the premise that flavan 3,4 diols as source of electrophilic flavanyl 4 carbocations and flavan 3,0-ols as nucleophiles of 1,2 represent the prime initiators of a process of repetitive condensation in which the immediate products also represent the sequent nucleophilic substrates **Guía de las ranas flecha.
