Control of Spatially Structured Random Processes and Random Fields with Applications Ruslan K. Chornei,Hans Daduna,Pavel S. Knopov,2006-09-03 This book is devoted to the study and optimization of spatiotemporal stochastic processes These are processes that simultaneously develop in space and time under random influences Such processes occur almost everywhere when the global behavior of complex systems is studied e.g. in physical and technical systems population

dynamics neural networks computer and telecommunication networks complex production networks and flexible manufacturing systems logistic networks and transportation systems environmental engineering climate modeling and prediction earth surface models and so on In the study of spatiotemporal stochastic processes the classical concepts of random fields which are models for spatially distributed random phenomena and of stochastic processes which are usually thought to describe the evolution over time of systems under random influences converge Over the last twenty years many research monographs were written with emphasis on this unifying point of view as were a huge number of articles and papers on this subject

Statistics for Spatio-Temporal Data Noel Cressie, Christopher K. Wikle, 2015-11-02 Winner of the 2013 DeGroot Prize. A state of the art presentation of spatio temporal processes bridging classic ideas with modern hierarchical statistical modeling concepts and the latest computational methods. Noel Cressie and Christopher K Wikle are also winners of the 2011 PROSE Award in the Mathematics category for the book *Statistics for Spatio Temporal Data* 2011 published by John Wiley and Sons. The PROSE awards for Professional and Scholarly Excellence are given by the Association of American Publishers, the national trade association of the US book publishing industry. *Statistics for Spatio Temporal Data* has now been reprinted with small corrections to the text and the bibliography. The overall content and pagination of the new printing remains the same; the difference comes in the form of corrections to typographical errors, editing of incomplete and missing references and some updated spatio temporal interpretations. From understanding environmental processes and climate trends to developing new technologies for mapping public health data and the spread of invasive species, there is a high demand for statistical analyses of data that take spatial temporal and spatio temporal information into account. *Statistics for Spatio Temporal Data* presents a systematic approach to key quantitative techniques that incorporate the latest advances in statistical computing as well as hierarchical, particularly Bayesian statistical modeling with an emphasis on dynamical spatio temporal models. Cressie and Wikle supply a unique presentation that incorporates ideas from the areas of time series and spatial statistics as well as stochastic processes. Beginning with separate treatments of temporal data and spatial data, the book combines these concepts to discuss spatio temporal statistical methods for understanding complex processes. Topics of coverage include: Exploratory methods for spatio temporal data including visualization, spectral analysis, empirical orthogonal function analysis and LISAs; Spatio temporal covariance functions; spatio temporal kriging and time series of spatial processes; Development of hierarchical dynamical spatio temporal models (DSTMs) with discussion of linear and nonlinear DSTMs and computational algorithms for their implementation; Quantifying and exploring spatio temporal variability in scientific applications including case studies based on real world environmental data. Throughout the book, interesting applications demonstrate the relevance of the presented concepts. Vivid full color graphics emphasize the visual nature of the topic and a related FTP site contains supplementary material. *Statistics for Spatio Temporal Data* is an excellent book for a graduate level course on spatio temporal statistics. It is also a valuable reference for researchers and practitioners in the fields of applied mathematics, engineering and the environmental and health sciences.

If you want to achieve something if you want to write a book paint a picture be sure the center of your existence is somewhere else and that it s solidly grounded only then will you be able to keep your cool and laugh at the attacks that are bound to come P Feyerabend This is a book about interdisciplinary public health reasoning and epidemic modelling in general and the study of the infamous 14 century AD Black Death disaster in particular We focus on the intellectual context in which epidemic modelling takes place in a way that accounts for the present day interdisciplinary and multicultural trends in scientific inquiry Like most scientific fields public health research defines itself based on knowledge which raises serious epistemic and cognitive issues Therefore we maintain that for public health modellers to function in an often complex environment they should be aware of the divergent conceptions of knowledge and the technological changes that these imply the multiple sources of information commonly available and their reliability the different styles of thinking adopted by the disciplines involved and the importance of developing sound interdisciplinary knowledge integration skills

Free Boundary Problems Pierluigi Colli,Claudio Verdi,Augusto Visintin,2012-12-06 Many phenomena of interest for applications are represented by differential equations which are defined in a domain whose boundary is a priori unknown and is accordingly named a free boundary A further quantitative condition is then provided in order to exclude indeterminacy
