Random Killer:

Spree Killers Mark Safarik, Katherine Ramsland, 2019-10-18 Spree Killers Practical Classifications for Law Enforcement and Criminology is the only exhaustive up to date analytical book on spree killers standing apart from those dedicated to mass murderers and serial killers Multicides have traditionally been categorized as double triple mass serial and spree while mass and serial have been further divided into subcategories Spree killing which involves the killing of at least three persons at two or more locations due to a precipitating incident that fuels the urge to kill remains a poorly defined concept In the United States the Federal Bureau of Investigation FBI eliminated this term from its multicide nomenclature in 2005 but the authors examination of 359 cases involving 419 spree killers from 43 countries shows that not only is there enough diversity among spree killers to form classifications similar to those devised for mass and serial but also that subtypes offer distinct utility for identification tracking and warning potential targets Spree Killers outline the designation of spree killer specifically and thoroughly In addition to looking at existing literature specific cases and the behavioral patterns it offers a fully worked up profile for the typology The behaviors and motives for spree killers align in six categories which are detailed in full The book provides unique insight for police forensic and investigative personnel into what to look for to respond to and in some cases identify and stopping certain types of spree killings

Wilson,2015-05-19 Extraordinary accounts of forensic crime detection from poisoners in ancient Rome to modern day serial killers by the bestselling author of *The Outsider* In 44 BC a Roman doctor named Antistius performed the first autopsy recorded in history on the corpse of murder victim Julius Caesar However not until the nineteenth century did the systematic application of scientific knowledge to crime detection seriously begin so that the tiniest scrap of evidence might yield astonishing results like the single horsehair that betrayed the murderer in New York s 1936 puzzling and sensational Nancy Titterton case Many such dramatic tales appear in this updated edition of the most gripping catalog of crimes by acclaimed criminologist Colin Wilson The book follows the progress of forensic science from the first cases of suspected arsenic poisoning right up to investigations using an impressive armory of high tech methods ballistic analysis blood typing voice printing textile analysis psychological profiling and genetic fingerprinting Colin Wilson has made himself the Philosopher King of forensic speculation the Diderot of the path labs The Times Literary Supplement Will enthrall connoisseurs of violent crime The Glasgow Herald *The Psycho Records* Laurence A.
