Visual Perception Vicki Bruce, Mark A. Georgeson, Patrick R. Green, 2014-08-27 This comprehensively updated and expanded revision of the successful second edition continues to provide detailed coverage of the ever growing range of research topics in vision In Part I the treatment of visual physiology has been extensively revised with an updated account of retinal processing a new section explaining the principles of spatial and temporal filtering which underlie discussions in later chapters and an up to date account of the primate visual pathway Part II contains four largely new chapters which cover recent psychophysical evidence and computational model of early vision edge detection perceptual grouping depth perception and motion perception The models discussed are extensively integrated with physiological evidence All other chapters in Parts II III and IV have also been thoroughly updated

An Introduction to 3D Computer Vision Techniques and Algorithms Boguslaw Cyganek, J. Paul Siebert, 2011-08-10 Computer vision encompasses the construction of integrated vision systems and the application of vision to problems of real world importance The process of creating 3D models is still rather difficult requiring mechanical measurement of the camera positions or manual alignment of partial 3D views of a scene However using algorithms it is possible to take a collection of stereo pair images of a scene and then automatically produce a photo realistic geometrically accurate digital 3D model This book provides a comprehensive introduction to the methods theories and algorithms of 3D computer vision Almost every theoretical issue is underpinned with practical implementation or a working algorithm using pseudo code and complete code written in C and MatLab There is the additional clarification of an accompanying website with downloadable software case studies and exercises Organised in three parts Cyganek and Siebert give a brief history of vision research and subsequently present basic low level image processing operations for image matching including a separate chapter on image matching algorithms explain scale space vision as well as space reconstruction and multiview integration demonstrate a variety of practical applications for 3D surface imaging and analysis provide concise appendices on topics such as the basics of projective geometry and tensor calculus for image processing distortion and noise in images plus image warping procedures An Introduction to 3D Computer Vision Algorithms and Techniques is a valuable reference for practitioners and programmers working in 3D computer vision image processing and analysis as well as computer visualisation It would also be of interest to advanced students and researchers in the fields of engineering computer science clinical photography robotics graphics and mathematics

Seeing, second edition John P. Frisby, James V. Stone, 2010-04-02 An accessible yet rigorous and generously illustrated exploration of the computational approach to the study of biological vision Seeing has puzzled scientists and philosophers for centuries and it continues to do so This new edition of a classic text offers an accessible but rigorous introduction to the computational approach to understanding biological visual systems The authors of Seeing taking as their premise David Marr

s statement that to understand vision by studying only neurons is like trying to understand bird flight by studying only feathers make use of Marr's three different levels of analysis in the study of vision: the computational level, the algorithmic level, and the hardware implementation level. Each chapter applies this approach to a different topic in vision by examining the problems the visual system encounters in interpreting retinal images and the constraints available to solve these problems, the algorithms that can realize the solution, and the implementation of these algorithms in neurons. Seeing has been thoroughly updated for this edition and expanded to more than three times its original length. It is designed to lead the reader through the problems of vision from the common but mistaken idea that seeing consists just of making pictures in the brain to the minutiae of how neurons collectively encode the visual features that underpin seeing. Although it assumes no prior knowledge of the field, some chapters present advanced material. This makes it the only textbook suitable for both undergraduate and graduate students that takes a consistently computational perspective, offering a firm conceptual basis for tackling the vast literature on vision. It covers a wide range of topics, including aftereffects, the retina, receptive fields, object recognition, brain maps, Bayesian perception, motion, color, and stereopsis. MATLAB code is available on the book's website, which includes a simple demonstration of image convolution.

Perceptual Organization Michael Kubovy, James R. Pomerantz, 2017-03-31 Originally published in 1981, perceptual organization had been synonymous with Gestalt psychology, and Gestalt psychology had fallen into disrepute. In the heyday of Behaviorism, the few cognitive psychologists of the time pursued Gestalt phenomena. But in 1981, Cognitive Psychology was married to Information Processing. Some would say that it was a marriage of convenience. After the wedding, Cognitive Psychology had come to look like a theoretically wrinkled Behaviorism. Very few of the mainstream topics of Cognitive Psychology made explicit contact with Gestalt phenomena. In the background, Cognition's first love, Gestalt, was pining to regain favor. The cognitive psychologists' desire for a phenomenological and intellectual interaction with Gestalt psychology did not manifest itself in their publications, but it did surface often enough at the Psychonomic Society meeting in 1976 for them to remark upon it in one of their conversations. This book then is the product of the editors' curiosity about the status of ideas at the time first proposed by Gestalt psychologists. For two days in November 1977, they held an exhilarating symposium that was attended by some 20 people, not all of whom are represented in this volume. At the end of our symposium, it was agreed that they would try in contributions to this volume to convey the speculative and metatheoretical ground of their research in addition to the solid data and carefully wrought theories that are the figure of their research.

Limits in Perception A.J. van Doorn, W.A. van de Grind, J.J. Koenderink, 2020-01-29 This book presents an analysis of limits in perception from the vantage point of the physicist, the engineer, the psychophysicist, the psychologist, and the theorist. Limits in perception find their causal explanation at many logically and/or physically different levels. Some of the most fundamental bottlenecks are due to the quantum mechanical and atomistic structure of the microworld. Other simple constraints are due to the material constitution of sensory organs. For

instance the fact that the eye is predominantly composed of water limits both the optical quality and the available spectral window The engineer uses knowledge on such limits to design equipment that optimizes human performance in daily life Examples include room acoustics and visual displays Psychophysicists and psychologists deal with limits on a quite different logical level These limits constrain much of our perceptually guided behaviour The book includes chapters on such topics as movement perception binocular vision illusory phenomena language and perception the perception of time A few concluding chapters on fundamental limits imposed by information theoretical constraints on the coding and representation of sensed structure are included Limits in Perception will be important reading material for scientists and or engineers in the following fields perception experimental psychology sensory biology physics neuroscience human engineering artificial intelligence robotics ophthalmology audiology psychonomics and ergonomics remote sensing

Sensation and Perception Bennett L. Schwartz, John H. Krantz, 2023-09-09 Rich in examples and applications to everyday life Sensation and Perception Third Edition is a cutting edge and highly readable account of modern sensation and perception from both a cognitive and neurocognitive perspective

Conscious Mind, Resonant Brain Stephen Grossberg, 2021-05-28 How does your mind work How does your brain give rise to your mind These are questions that all of us have wondered about at some point in our lives This book explores the exciting answers to these questions that modern theories of mind and brain have proposed from one of the most influential scientists of the past 50 years

Artificial Neural Networks for Computer Vision Yi-Tong Zhou, Rama Chellappa, 2012-12-06 This monograph is an outgrowth of the authors recent research on the development of algorithms for several low level vision problems using artificial neural networks Specific problems considered are static and motion stereo computation of optical flow and deblurring an image From a mathematical point of view these inverse problems are ill posed according to Hadamard Researchers in computer vision have taken the regularization approach to these problems where one comes up with an appropriate energy or cost function and finds a minimum Additional constraints such as smoothness integrability of surfaces and preservation of discontinuities are added to the cost function explicitly or implicitly Depending on the nature of the inversion to be performed and the constraints the cost function could exhibit several minima Optimization of such nonconvex functions can be quite involved Although progress has been made in making techniques such as simulated annealing computationally more reasonable it is our view that one can often find satisfactory solutions using deterministic optimization algorithms

Plasticity in Sensory Systems Jennifer K. E. Steeves, Laurence R. Harris, 2013 Plasticity is a fundamental property of neural development and learning in living organisms It also contributes to problems associated with aging and degenerative processes Understanding neural plasticity has huge implications for those seeking to recover from brain injury or sensory deprivation and regular folk vying to improve their skills and ability Centered on three themes this book explores the latest research in plasticity in sensory systems with a focus primarily on visual and auditory systems It covers a breadth of recent scientific study within the field including research on healthy systems and diseased

models of sensory processing Topics include visual and visuomotor learning models of how the brain codes visual information sensory adaptations in vision and hearing as a result of partial or complete visual loss in childhood plasticity in the adult visual system and plasticity across the senses as well as new techniques in vision recovery rehabilitation and sensory substitution of other senses when one sense is lost This unique edited volume the fruit of an International Conference on Plastic Vision held at York University Toronto will provide students and scientists with an overview of the ongoing research related to sensory plasticity and perspectives on the direction of future work in the field *Factors which Affect Perception of Depth in Single Image Random Dot Stereograms* Erven L.
