## Introduction

It is important to note that Jo Boaler is a writer and educator who has received many prizes and awards. At the same time, the woman leads a movement that aims to change the way teachers and students think about mathematics and perceive it. Thus, during her speech at TEDx, she talked about the experiment she conducted at Stanford. Moreover, the speaker immediately announced that her students cried in order to interest people to listen and capture their attention. Hence, the experiment was performed with students who spent a lot of time studying algebra and really tried to improve their knowledge. However, the innovation was that Jo Boaler did not use standard tests to check their knowledge, but showed them a virtual picture with squares and assigned tasks.

## Discussion

Interestingly, the students' opinions were different, they believed that the squares grow horizontally, vertically, or proportionally. However, the speaker notes that two people in the group cried because they realized that the simple principle that explains the algebraic progression. Moreover, the tears were caused by the fact that these people spent many hours studying higher mathematics using standard methods, but most of them could not explain the arrangement of squares in the picture.

Then, the woman began to share her experience of studying at school, where children constantly learn new symbols and formulas, which makes them tired and afraid. Therefore, most of the students do not have enough knowledge of mathematics, because they consider this subject extremely difficult and boring. Instead, as a solution to this problem, Jo Boaler proposes to apply knowledge about the brain to make it easier to learn mathematics. Therefore, the speaker demonstrates a picture of the human brain and shows that two of the five brain pathways are visual. Thus, she showed that the brain can more easily perceive information that is difficult for it, which is

Biographical Dictionary of Modern American Educators Shirley Ohles, Frederik Ohles, John Ramsay, 1997-10-28 Widely praised Greenwood's Biographical Dictionary of American Educators Greenwood 1978 quickly became a standard reference work for students and scholars of American education. This new volume includes biographical sketches of more than 400 notable researchers, leaders, reformers, critics, and practitioners from all major fields of education and extends the coverage of its predecessor to the mid 20th century. Its topical range encompasses such diverse areas as psychology, music, health, measurement and evaluation, science, special education, history, and administration. It treats education at all levels including early childhood, elementary and secondary, higher and adult. Most of the educators profiled were active in the 20th century but several dozen have been included from the 19th century. A special effort has been made to include women and educators of color whose contributions have often been overlooked in the past. Each biographical sketch includes information on family background, a description of the educator's accomplishments, and a digest of the person's education and career, professional and civic service, major publications, and principal honors. Each profile ends with a list of references, and the volume closes with appendices listing birth places, states of major service, fields of work, a chronological listing of educators, and a list of important dates in American education. A comprehensive index concludes the volume. Educators are included from all fifty states and were selected from numerous suggested candidates for inclusion. Most of the educators profiled were active in the 20th century but several dozen have been included from the 19th century. A special effort has been made to include women and educators of color whose contributions have often been overlooked in the past.

Dictionary of Modern American Philosophers John R. Shook, 2005-01-01 The Dictionary of Modern American Philosophers includes both academic and non-academic philosophers and a large number of female and minority thinkers whose work has been neglected. It includes those intellectuals involved in the development of psychology, pedagogy, sociology, anthropology, education, theology, political science, and several other fields before these disciplines came to be considered distinct from philosophy in the late nineteenth century. Each entry contains a short biography of the writer, an exposition and analysis of his or her doctrines and ideas, a bibliography of writings, and suggestions for further reading. While all the major post-Civil War philosophers are present, the most valuable feature of this dictionary is its coverage of a huge range of less well-known writers, including hundreds of presently obscure thinkers. In many cases, the Dictionary of Modern American Philosophers offers the first scholarly treatment of the life and work of certain writers. This book will be an indispensable reference work for scholars working on almost any aspect of modern American thought.

Mathematical Work in Educational Context Alain Kuzniak, Elizabeth Montoya-Delgadillo, Philippe R. Richard, 2022-03-31 This book is a friendly and complete introduction to one of the most comprehensive contemporary theories of mathematics teaching and learning By focusing on mathematical work performed by students and teachers during mathematics session the theory of Mathematical Workings Spaces MWS has opened up new perspectives and avenues on mathematics education and mathematical thinking In particular it enables the identification of students knowledge production processes and helps teachers to shape them The first part of the book explores the heart of the theory and aims to further describe and understand epistemological and cognitive aspects of mathematical work The second part develops the different MWS dedicated to observing how this work depends on the expectations of educational systems how it is formed and taught and how individuals appropriate it In the last part some applications and perspectives are discussed regarding topics of major importance today in mathematics education which relate to technological and digital tools teacher training and modeling

activities In line with the spirit of the theory the book was written to reflect the conceptual unity at the heart of the theory of MWS and at the same time to show the freedom and diversity of approaches given space therein Written for researchers and professionals in mathematics education it offers plenty of concrete examples from different educational systems around the world to illustrate the theoretical concepts and show the applicability of the theory to practice and research

Rediscovering the Spirit of Education After Scientific Management Jim Neyland, 2010-01-01 Education is being eroded Otherwise put education is more and more being brought under the yoke of a mode of thought that reduces it to something mechanical narrowly characterized by codes predefined outcomes protocols and rules The cause it is argued is the growing dominance of a new fashion in education called scientific management Scientific management has become the new and unquestionable orthodoxy in education As a consequence it has become increasingly difficult to imagine let alone articulate an alternative This book explores the origins and fundamental assumptions of scientific management and suggests how the spirit of education might be rediscovered by turning instead to a more ethical socially interpersonal and full bodied orientation The approach taken avoids the difficulties usually associated with such ethically oriented treatments of education by drawing on recent findings in neurophysiology psychology primate and language studies The book is a Reader and is designed to both supplement and invigorate undergraduate and postgraduate courses in education and to appeal to general readers who have an interest in education **The Publishers Weekly**, 1881 **Improving Education** Joanna Swann, John Pratt, 1999-10-01 Stimulated by late 1990s debate in the UK on quality effectiveness and usefulness of educational research reports by OFSTED DFEE and NFER this book shows how to improve research combining principles and practice and offers case studies from primary secondary tertiary and adult sectors **Doing the Scholarship of Teaching and Learning in Mathematics** Jacqueline M. Dewar, Curtis D. Bennett, 2014-11-03 The Scholarship of Teaching and Learning SoTL movement encourages faculty to view teaching problems as invitations to conduct scholarly investigations In this growing field of inquiry faculty bring their disciplinary knowledge and teaching experience to bear on questions of teaching and learning They systematically gather evidence to develop and support their conclusions The results are to be peer reviewed and made public for others to build on This Notes volume is written expressly for collegiate mathematics faculty who want to know more about conducting scholarly investigations into their teaching and their students learning Envisioned and edited by two mathematics faculty the volume serves as a how to guide for doing SoTL in mathematics
