Rather than suggesting the expensive solution of building new bricks and mortar clinics and hospitals and increasing the number of doctors and nurses in these deprived areas the authors propose a complete change of mindset. They outline a number of ideas for improving healthcare including rapid diagnostic testing for infectious and non infectious diseases at a point of care facility together with low cost portable imaging devices. In addition the authors recommend a change in the way in which health care is delivered. This approach requires task shifting within the healthcare provision system so that nurses laboratory technicians pharmacists and others are trained in the newly available technologies thus enabling faster and more appropriate triage for people requiring medical treatment. This text Describes the current burden of communicable and non communicable diseases in low to middle income countries throughout the world. Describes the major advances in healthcare outcomes in low to middle income countries derived from implementation of the United Nations World Health Organisation's 2000 Millennium Development Goals. Provides a review of inexpensive rapid diagnostic point of care tests for infectious diseases in low resource countries particularly for people living in remote rural areas. Provides a review of other rapid point of care services for assessing hematological function biochemical function renal function hepatic function and status including hepatitis acid base balance sickle cell disease severe acute malnutrition and spirometry. Explores the use of low cost portable imaging devices for use in remote rural areas including a novel method of examining the optic fundus using a smartphone and the extensive value of portable ultrasound scanning when x ray facilities are not available. Describes the use of telemedicine in the clinical management of both children and adults in remote rural settings. Looks to the future of clinical management in remote impoverished rural settings using nucleic acid identification of

pathogens the use of nanoparticles for water purification the use of drones the use of pulse oximetry and the use of near infrared spectroscopy Finally it assesses the potential for future healthcare improvement in impoverished areas and how the United Nations World Health Organization 2015 Sustainable Development Goals are approaching this Written for physicians infectious disease specialists pathologists radiologists nurses pharmacists and other health care workers as well as government healthcare managers Revolutionizing Tropical Medicine is a new up to date essential and realistic guide to treating and diagnosing patients in low resource tropical countries based on new technologies Manson's Tropical Diseases E-Book Jeremy Farrar, Peter J. Medical care is the most critical issue of our time and will be so for the foreseeable future. In this regard, the pace and sophistication of advances in medicine in the past two decades have been truly breathtaking. This has necessitated a growing need for comprehensive reference resources that highlight current issues in specific sectors of medicine. Keeping this in mind, each volume in the Current Issues in Medicine series is a stand-alone text that provides a broad survey of various important topics in a focused area of medicine, all accomplished in a user-friendly yet interconnected format. This volume addresses advances in medical imaging, detection, and diagnostic technologies. Technological innovations in these sectors of medicine continue to provide for safer, more accurate, and faster diagnosis for patients. This translates into superior prognosis and better patient compliance while reducing morbidity and mortality. Hence, it is imperative that practitioners stay current with these latest advances to provide the best care for nursing and clinical practices. While recognizing how expansive and multifaceted these areas of medicine are, *Advances in Medical Imaging, Detection, and Diagnosis* addresses crucial recent progress, integrating the knowledge and experience of experts from academia and the clinic. The multidisciplinary approach reflected makes this volume a valuable reference resource for medical practitioners, medical students, nurses, fellows, residents, undergraduate and graduate students, educators, venture capitalists, policymakers, and biomedical researchers. A wide audience will benefit from having this volume on their bookshelf: health care systems, the pharmaceutical industry, academia, and government.

**Expedition and Wilderness Medicine** Gregory H. Bledsoe, Michael J. Manyak, David A. Townes, 2008-11-03. With an increase in visits to remote and dangerous locations around the world, the number of serious and fatal injuries and illnesses associated with these expeditions has markedly increased. Medical personnel working in or near such locations are not always explicitly trained in the management of unique environmental injuries such as high altitude sickness, the bends, lightning strikes, frostbite, acute dehydration, venomous stings and bites, and tropical diseases. Many health care professionals seek training in the specialty of wilderness medicine to cope with the health risks faced when far removed from professional care resources, and the American College of Emergency Medicine has recently mandated that a minimum level of proficiency needs to be exhibited by all ER physicians in this discipline. This book covers everything a prospective field physician or medical consultant needs to prepare for when beginning an expedition and explains how to treat a variety of conditions in a concise, clinically oriented format.
