multivariate analysis and machine learning algorithms that are rarely used in the social sciences when dealing with HD yet have sound mathematical and statistical bases These techniques can be successfully used for predictive analysis in the earth natural sciences decision sciences and management disciplines and are equally effective in terms of capturing predicting and projecting the composite HD landscape This book will especially benefit two groups of readers firstly HD practitioners who want to find out why some areas are doing better than others by exploring the complex interactions of spatially linked variables with different HD parameters And secondly practitioners in other branches of the social sciences who are not concerned with HD but are looking for hands on training with techniques they can apply in their respective field of spatial investigations
