Reducing the Odds National Research Council, Board on Children, Youth, and Families, Institute of Medicine, Committee on Perinatal Transmission of HIV, 1999-02-13 Thousands of HIV positive women give birth every year Further because many pregnant women are not tested for HIV and therefore do not receive treatment the number of children born with HIV is still unacceptably high What can we do to eliminate this tragic and costly inheritance In response to a congressional request this book evaluates the extent to which state efforts have been effective in reducing the perinatal transmission of HIV The committee recommends that testing HIV be a routine part of prenatal care and that health care providers notify women that HIV testing is part of the usual array of prenatal tests and that they have an opportunity to refuse the HIV test This approach could help both reduce the number of pediatric AIDS cases and improve treatment for mothers with AIDS Reducing the Odds will be of special interest to federal state and local health policymakers prenatal care providers maternal and child health specialists public health practitioners and advocates for HIV AIDS patients January

Lethal Decisions Arthur J. Ammann, 2021-04-30 This first person account by one of the pioneers of HIV AIDS research chronicles the interaction among the pediatric HIV AIDS community regulatory bodies governments and activists over more than three decades After the discovery of AIDS in a handful of infants in 1981 the next fifteen years showed remarkable scientific progress in prevention and treatment although blood banks drug companies and bureaucrats were often slow to act 1996 was a watershed year when scientific and clinical HIV experts called for treating all HIV infected individuals with potent triple combinations of antiretroviral drugs that had been proven effective Aggressive implementation of prevention and treatment in the United States led to marked declines in the number of HIV related deaths fewer new infections and hospital visits and fewer than one hundred infants born infected each year Inexplicably the World Health Organization recommended withholding treatment for the majority of HIV infected individuals in poor countries and clinical researchers embarked on studies to evaluate inferior treatment approaches even while the pandemic continued to claim the lives of millions of women and children Why did it take an additional twenty years for international health organizations to recommend the treatment and prevention measures that had had such a profound impact on the pandemic in wealthy countries The surprising answers are likely to be debated by medical historians and ethicists At last in 2015 came a universal call for treating all HIV infected individuals with triple combination antiretroviral drugs But this can only be accomplished if the mistakes of the past are rectified The book ends with recommendations on how the pediatric HIV AIDS epidemic can finally be brought to an end

Blaming Mothers Linda C. Fentiman, 2017-03-14 Presentation de l'auteur In the past several decades medicine the media and popular culture have focused on mothers as the primary source of health risk for their children even though American children are healthier than ever The American legal system both reflects and reinforces this conception of risk This book explores how this occurs by looking at unconscious psychological processes including the ways in which we perceive risk which shape the actions of key legal decisionmakers including prosecutors judges and jurors These psychological processes inevitably distort the way that ostensibly neutral legal principles are applied in ways that are biased against mothers The book shows how assertions that mothers and mothers to be have risked their children's health play out in practice Pregnant women women who do or do not breastfeed and mothers whose children are injured or killed by the mother's abusive male partner end up facing civil lawsuits and criminal prosecution The book also illustrates how America's resistance to the precautionary principle has led to an epidemic of children poisoned by lead Vaccination is the only area in which parents are permitted to opt out of medically recommended health care for their children The book explores the role of choice in children's health and how it is applied unevenly to mothers and others including manufacturers of toxic products The book ends with recommendations for real improvement in children's health
