Flügel,2012-12-06      Carbonate Facies in Geologic History J.L. Wilson,2012-12-06 Since 1950 geologists have learned more about the origin and lithification of carbonate sediments than in all the previous years of the history of science This is true in all the diverse fields of carbonate geology the study of Recent environments marine zoology and botany organic geochemistry trace element and isotope geochemistry mineralogy microfacies of depositional environments and trace fossil and sedimentary structure investigation A synthesis of this new knowledge is just beginning to be formulated The purpose of this volume is to introduce the advanced student and petroleum explorationist principally to one important aspect of this study to some of the principles of carbonate geology which may serve to interpret the depositional environments of ancient strata and to better define their sequences and patterns Chapter I is a brief review of principles of carbonate sedimentation For a full discussion of the mineralogy geochemistry and diagenesis of carbonates along with a review of Holocene sediments one may refer to Bathurst s 1971 and Milliman s 1974 texts Chapter II reviews stratigraphic and paleotectonic concepts and discusses a general model for carbonate deposition Chapter III offers an outline of carbonate petrography concentrating on lithologic description for the purposes of environmental interpretation For a further review of this subject and excellent photomicrographs Horowitz and Potter 1971 and Majewske 1969 may be used

## **Encyclopedia of Modern Coral Reefs**

David Hopley,2010-11-26 Coral reefs are the largest landforms built by plants and animals Their study therefore incorporates a wide range of disciplines This encyclopedia approaches coral reefs from an earth science perspective concentrating especially on modern reefs Currently coral reefs are under high stress most prominently from climate change with changes to water temperature sea level and ocean acidification particularly damaging Modern reefs have evolved through the massive environmental changes of the Quaternary with long periods of exposure during glacially lowered sea level periods and short periods of interglacial growth The entries in this encyclopedia condense the large amount of work carried out since Charles Darwin first attempted to understand reef evolution Leading authorities from many countries have contributed to the entries covering areas of geology geography and ecology providing comprehensive access to the most up to date research on the structure form and processes operating on Quaternary coral reefs

Quaternary Coral Reef Systems Lucien F. Montaggioni,Colin J.R. Braithwaite,2009-08-13 This book presents both state of the art knowledge from Recent coral reefs 1 8 million to a few centuries old gained since the eighties and introduces geologists oceanographers and environmentalists to sedimentological and paleoecological studies of an ecosystem encompassing some of the world s richest biodiversity Scleractinian reefs first appeared about 300 million years ago Today coral reef systems provide some of the most sensitive

gauges of environmental change expressing the complex interplay of chemical physical geological and biological factors The topics covered will include the evolutionary history of reef systems and some of the main reef builders since the Cenozoic the effects of biological and environmental forces on the zonation of reef systems and the distribution of reef organisms and on reef community dynamics through time changes in the geometry anatomy and stratigraphy of reef bodies and systems in relation to changes in sea level and tectonics the distribution patterns of sedimentary framework or detrital facies in relation to those of biological communities the modes and rates of reef accretion progradation aggradational versus backstepping coral growth versus reef growth the hydrodynamic forces controlling water circulation through reef structures and their relationship to early diagenetic processes the major diagenetic processes affecting reef bodies through time replacement and dissolution dolomitization phosphatogenesis and the record of climate change by both individual coral colonies and reef systems over the Quaternary state of the art knowledge from Recent corals reefs introduction to sedimentological and paleoecological studies of an ecosystems encompassing some of the world's richest biodiversity authors are internationally regarded authorities on the subject trustworthy information

### **Calcareous Algae and Stromatolites** Robert

Riding, 2012-12-06 This volume provides a comprehensive overview of calcareous algae and stromatolites It contains reviews by leading specialists of major groups together with accounts of floras through time It deals with marine and non marine benthic and planktic and modern as well as ancient examples As the first multi authored review of the field ever published in English it is an essential reference text for this complex field It is designed for both postgraduate researchers and professional scientists who require up to date and authoritative information on these long ranging organisms and fabrics which are of wide evolutionary environmental and sedimentary significance

### Triassic-Jurassic Rifting W.

Manspeizer, 2015-08-26 Extensive field studies on the African and North American plates during this past decade have yielded a wealth of new data and ideas about rift basins and the origin of passive margins New surface and subsurface basins have been identified fossils abound in strata that only recently were considered barren oil exploration is being actively pursued in continental strata of the Richmond Taylorsville Sanford and Newark basins Late Triassic marine strata have been identified in Georges Bank off the coast of Massachusetts and the roles of wrench tectonics successor basins and listric normal faults have challenged the classical view that these are simple extensional basins This two part work brings together representative examples of these studies It is not intended as an exhaustive synthesis of the subject but rather a vehicle to present new data new ideas and alternative views Some of the papers present regional summaries others attempt to relate local features to regional questions while others describe modern rift basins as possible analogs of early Mesozoic basins Geologic data from the Atlantic passive margins record that continental rifting of central Pangaea occurred during the latest Triassic earliest Jurassic Liassic and that sea floor spreading probably began no later than the Middle Jurassic The primary subject of this book focuses on the Triassic Jurassic rifting events that led to the breakup of Pangaea and the opening of the

central Atlantic Ocean Whereas other treatises have focused on the origin of the passive margins inferred primarily from geophysical data of the offshore basins this volume primarily and uniquely focuses on land based field studies of the onshore synrift basins Offshore studies of synrift basins are also included and add substantially to our understanding of the breakup However the onshore data base while complementary is different thus providing researchers with a different insight to the questions at hand The book is organized into four sections Section I Pangaea in Time and Space first locates Pangaea in space and then places the Triassic basins within an historical context on the Alleghanian Variscan Orogen Section 2 the offshore and onshore basins of the North American and African Plates comprises about 70% of all papers in this book and includes papers on structural geology petrology paleontology sedimentation organic geochemistry vulcanism and mineral resources Section 3 Related Mesozoic Atlantic Rift Basins includes papers on Iberia Western Europe the Benue Trough and Brazil The final section of the book Analogs includes the rift basins of East Africa the Red Sea the Gulf of Elat Aqaba the Dead Sea and the Rio Grande The book is richly illustrated throughout with figures photographs tables and fold out maps including nine in full colour

**Artificial Reef Evaluation** William Seaman,2000-03-23 Beneath the coastal waters of the world lie thousands of artificial reefs Some are old and retired freighters and ships that once plied the oceans of the world but now serve as habitats for marine life Others are newer reefs that have been designed and built for specific applications With the field of aquatic habitat technology continually growi

Proceedings ,1977 **Analogue and Numerical Modelling of Sedimentary Systems** Poppe de Boer,George Postma,Kees van der Zwan,Peter Burgess,Peter Kukla,2009-01-26 Understanding basin fill evolution and the origin of stratal architectures has traditionally been based on studies of outcrops well and seismic data studies of and inferences on qualitative geological processes and to a lesser extent based on quantitative observations of modern and ancient sedimentary environments Insight gained on the basis of these studies can increasingly be tested and extended through the application of numerical and analogue forward models Present day stratigraphic forward modelling follows two principle lines 1 the deterministic process based approach ideally with resolution of the fundamental equations of fluid and sediment motion at all scales and 2 the stochastic approach The process based approach leads to improved understanding of the dynamics physics

of the system increasing our predictive power of how systems evolve under various forcing conditions unless the system is highly non linear and hence difficult or perhaps even impossible to predict The stochastic approach is more direct relatively simple and useful for study of more complicated or less well understood systems Process based models more than stochastic ones are directly limited by the diversity of temporal and spatial scales and the very incomplete knowledge of how processes operate and interact on the various scales The papers included in this book demonstrate how cross fertilization between traditional field studies and analogue and numerical forward modelling expands our understanding of Earth surface systems
