The German Continental Deep Drilling Program (KTB) Rolf Emmermann, Jürgen Wohlenberg, 2013-04-17 In October 1986 the German Minister for Research and Technology Bundesminister für Forschung und Technologie Dr H Riesenhuber officially announced that the super deep borehole of the Continental Deep Drilling Program of the Federal Republic of Germany KTB would be drilled in the Oberpfalz area of Northern Bavaria The site selection was based on a recommendation from the Deutsche Forschungsgemeinschaft DFG made after an evaluation by the Project Management of the technical and financial risks involved This decision was preceded by a conference held from September 19 to 21 1986 in Seeheim Odenwald at which the results of the site studies in the Oberpfalz and the Schwarzwald were presented and thoroughly debated The models and scientific targets resulting from these investigations formed the basis for a vote by the DFG Senate Commission for Geoscientific Interdisciplinary Research which was taken immediately after the conference After evaluation of all scientific and technical aspects the members of the commission voted almost unanimously for the Oberpfalz site It was however strongly emphasized that both locations had a wealth of attractive research objectives and that despite clear cut differences in some major aspects scientifically the two could be regarded as more or less equivalent Both locations would be excellent sites for research drilling and would certainly contribute to the advancement of geoscience

The History of Geophysics in Southern Africa Johan H de Beer, 2016-01-25 Geophysics is a comparatively young science which only evolved as a distinct discipline during the 19th century However its phenomena like earthquakes tsunamis volcanic eruptions and lightning had been objects of fear curiosity and speculation since ancient times In this book Johan de Beer and his research team reveal that geophysical activity in South Africa can be traced back to as early as 1488 This is a truly astonishing revelation which deserves to be firmly entrenched as part of the country's proud history The book also discusses the history and formation of South African geophysical institutions that made a huge and seldom acknowledged contribution to the technological development of southern Africa

Encyclopedia of Solid Earth Geophysics Harsh Gupta, 2011-06-29 The past few decades have witnessed the growth of the Earth Sciences in the pursuit of knowledge and understanding of the planet that we live on This development addresses the challenging endeavor to enrich human lives with the bounties of Nature as well as to preserve the planet for the generations to come Solid Earth Geophysics aspires to define and quantify the internal structure and processes of the Earth in terms of the principles of physics and forms the intrinsic framework which other allied disciplines utilize for more specific investigations The first edition of the Encyclopedia of Solid Earth Geophysics was published in 1989 by Van Nostrand Reinhold publishing company More than two decades later this new volume edited by Prof Harsh K Gupta represents a thoroughly revised and expanded reference work It brings together more than 200 articles covering established and new concepts of Geophysics across the various sub disciplines such as Gravity Geodesy Geomagnetism Seismology Seismics Deep Earth Processes Plate Tectonics Thermal Domains Computational Methods etc in a systematic and consistent

format and standard It is an authoritative and current reference source with extraordinary width of scope It draws its unique strength from the expert contributions of editors and authors across the globe It is designed to serve as a valuable and cherished source of information for current and future generations of professionals

Seismic Exploration of the Deep Continental Crust Dirk Gajewski, Wolfgang Rabbel, 2012-12-06 DEKORP the German continental reflection seismic program was the major focus of deep seismic research in Germany in the 1980s and 1990s The seismic sections provided fundamental new insight into deep geological structure of the European continent and the dynamics of continental formation They formed the basis for worldwide comparative studies of orogenic structure The complicated signature of the reflections from the deep crust indicated that new processing and interpretation techniques must be considered to better image the crystalline crust Results of these efforts including pre stack migration 3 D imaging shear waves and seismic anisotropy are presented in this special volume In part the articles open the perspective to new and future research In part they document research activity triggered by technical and interpretational questions raised by DEKORP field work and profiling results Many of the presented methods can find immediate application in industrial seismic prospecting

Observation of the Continental Crust through Drilling II Hans-Jürgen Behr, Francis G. Stehli, Helmut Vidal, 2012-12-06 The purpose of this book is to inform geoscientists about the progress made in scientific continental deep drilling as a new method for studying the continental crust The Seeheim symposium was the second meeting organized for experts of the various national programs to present and discuss the results and progress made in their respective programs since the first symposium in Tarrytown in 1984 Various contributors dealt with the present state of and experience in deep drilling techniques as well as with the development of logging tools for drilling at high temperatures Special emphasis was laid on the Continental Deep Drilling Program of the Federal Republic of Germany and its scientific aims

Super-Deep Continental Drilling and Deep Geophysical Sounding Karl Fuchs, Yevgeny A. Kozlovsky, Anatoly I. Krivtsov, Mark D. Zoback, 2012-12-06 The articles in this volume were selected from a series of reports delivered in the Soviet Union at Yaroslavl during the International Seminar Super deep drilling and deep geophysical research which was organized and held in August 1988 by the Ministry of Geology of the USSR jointly with the Inter Union Commission on the Lithosphere One of the most important problems of modern geology is the state and prospects of further development of deep continental structure investigations was discussed at the seminar with the participation of 245 scientists and specialists from 19 countries At the plenary and sectional meetings of the seminar 83 reports were delivered discussions on the most interesting problems were organized the exchange of ideas between the leading scientists a round table took place in discussion The distinctive feature of the present collection of articles is the wide scope of the investigation of the Earth's crust The reports elucidate such subjects of world importance as 1 achievements in implementation of major scientific programs investigating deep Earth structure and plans for their further materialization 2 theoretical problems of carrying out geological geophysical explorations and drilling operations and 3 new approaches to the

study of the Earth's interior. The results of deep investigations of individual countries and organizations are considered and concrete technical elaboration methods of work execution etc are discussed.

Geodynamic Evolution of the Indian Shield: Geophysical Aspects Om Prakash Pandey, 2020-04-28 This book addresses time bound geotectonic evolution of the various geological terrains of the Indian continent on the basis of integrated geophysical studies like seismic, seismological, gravity, magnetic, magnetotelluric and heat flow carried out over the past five decades. Further it discusses elastic and petrophysical properties of the Earth's crust relevant to geological investigations. The book also shares latest findings on the geodynamic development of the Indian shield and nearby continental margins including Arabian Sea.

The Solid Earth C. M. R. Fowler, 1990-06-29 A general introduction to the study of modern physics of the solid Earth including how the Earth's surface operates and the workings of the Earth's deep interior. The emphasis throughout the discussion is on basic physical principles rather than instrument.

Rivers of India Shyam Kanhaiya, Saurabh Singh, Arohi Dixit, Atul Kumar Singh, 2024-03-01 This volume presents geological, geographical, environmental and agriculture related studies on rivers focusing on basins of the three geomorphic divisions of India i.e. peninsular India, Indo Gangetic plain and extra peninsular India. The book compiles data on both the small and large river systems of India. The large rivers include Jhelum, Ghaghara, Narmada, Son, Krishna and Godavari and the small scale rain fed and groundwater fed rivers such as Gomti have been studied. The chapters comprehensively provide assessments of geomorphological aspects, river sediment supply, clean water availability for human population, ground water recharge, flood management and irrigation. The information presented in this book will appeal to students, teachers, researchers and planners engaged in river development, management and conservation.

Treatise on Geophysics, 2015-04-17 Treatise on Geophysics Second Edition is a comprehensive and in depth study of the physics of the Earth beyond what any geophysics text has provided previously. Thoroughly revised and updated it provides fundamental and state of the art discussion of all aspects of geophysics. A highlight of the second edition is a new volume on Near Surface Geophysics that discusses the role of geophysics in the exploitation and conservation of natural resources and the assessment of degradation of natural systems by pollution. Additional features include new material in the Planets and Moon, Mantle Dynamics, Core Dynamics, Crustal and Lithosphere Dynamics, Evolution of the Earth and Geodesy volumes. New material is also presented on the uses of Earth gravity measurements. This title is essential for
