Risks And Wrongs Philosophical Analysis:

Perspectives on Ignorance from Moral and Social Philosophy Rik Peels, 2016-06-23 This edited collection focuses on the moral and social dimensions of ignorance an undertheorized category in analytic philosophy Contributors address such issues as the relation between ignorance and deception ignorance as a moral excuse ignorance as a legal excuse and the relation between ignorance and moral character In the moral realm ignorance is sometimes considered as an excuse some specific kind of ignorance seems to be implied by a moral character and ignorance is closely related to moral risk Ignorance has certain social dimensions as well it has been claimed to be the engine of science it seems to be entailed by privacy and secrecy and it is widely thought to constitute a legal excuse in certain circumstances Together these contributions provide a sustained inquiry into the nature of ignorance and the pivotal role it plays in the moral and social domains

The Political Theories of Risk Analysis Nicholas P. Guehlstorf, 2012-11-03 The purpose of this study is to question whether liberal political theories ought to inform the way policymakers and administrators analyze risk in proposed courses of environmental practice In order to explore the relationship of liberal theory to rational practice in environmental policy this project examines the risk analysis used to approve the genetically engineered bovine growth hormone in American agricultural policy The Political Theories of Risk Analysis suggests that American environmental public policy is attempting to assess danger with an incomplete notion of utility to eliminate the hazards of society with an inadequate contractual justification of political authority and to publicly debate accepted levels of risk with an unfulfilled critical social theory Because environmental risk analyses are incorrectly perceived as technically rational and socially apolitical they result in practices that are muddled and misdirected Making theoretical foundations explicit however could lead to improved practice Public policy and administrative decisions regarding agricultural biotechnologies should and can function with more concern for democratic values The

Flood Risk and Social Justice Zoran Vojinovic, Michael B. Abbott, 2012-03-05 Flood Risk and Social Justice is a response to the rising significance of floods and flood related disasters worldwide as an initiative to promote a socially just approach to the problems of flood risk. It integrates the human social and the technological components to provide a holistic view. This book treats flooding as a multi-dimensional human and natural world tragedy that must be accommodated using all the social and technological means that can be mobilised before, during and after the flooding event. It covers socially just flood risk mitigation practices which necessitate a wide range of multidisciplinary approaches starting from social and wider environmental needs including feedback cycles between human needs and technological means. Flood Risk and Social Justice looks at how to judge whether a risk is acceptable or not by addressing an understanding of social and phenomenological considerations rather than simple calculations of probabilities multiplied by unwanted outcomes and their balancing between costs and benefits. It is argued that the present flood management practice should be largely replaced by the social justice approach where particular attention is given to deciding what is the right thing to do within a much wider context. Thus it insists upon the validity of modes of human understanding which cannot be addressed within the limited context of modern science. Flood Risk and Social Justice is written to support a wide range of audiences and seeks to improve the dialogue between researchers and practitioners from different disciplines including post graduate engineering, environmental and social science students, industry practitioners, academics, planners, environmental advocacy groups and environmental law professionals who have a strong interest in a new kind of social justice work that can act as a continuous counter balance to the various mechanisms that unceasingly give rise to profound injustices. More information about this book can be found in this article written for the WaterWiki by the author: <http://www.iwawaterwiki.org/xwiki/bin/view/Articles/FloodRiskandSocialJustice>. Authors: Zoran Vojinovic is Associate Professor at the UNESCO IHE Institute for Water Education Delft the Netherlands with almost 20 years of consulting and research experience in various aspects of water industry in New Zealand, Australia, Asia, Europe, Central South America and the Caribbean. Michael B. Abbott is Emeritus Professor at the UNESCO IHE Institute for Water Education Delft the Netherlands and a Director of the European Institute for Industrial Leadership in Brussels. He founded and developed the disciplines of Computational Hydraulics and Hydroinformatics and co-founded the Journal of Hydroinformatics with Professor Roger Falconer.

Reasonableness and Risk Gregory C. Keating, 2022 The law of torts is concerned with what we owe to one another in the way of obligations not to interfere with or impair each other's urgent interests as we go about our lives in civil society. This book argues that tort law addresses a domain of basic justice and that its rhetoric of reasonableness implies a distinctive morality of mutual right and responsibility.

The Lesser Gamble Ihor Ivliev, 2025-08-17 The Central Argument Architecture of the Doctrine This manuscript forwards a structured diagnostic, strategic and operational framework for practitioners navigating systemic risk. It proceeds from a core

evidence based thesis that the dominant trajectory of our global system is a self terminating path of myopic optimization now dangerously supercharged by a high velocity technological arms race This default trajectory is presented not as an accident but as a predictable consequence of timeless scale invariant logics The framework is architected as a coherent intellectual circuit where each of its three books performs a distinct and necessary function within the doctrine s logic Volume I The Diagnosis the Stance performs a clinical audit of the acute crisis establishing its systemic nature and the structural failure of conventional control It diagnoses the core pathology Wetware s Foreclosing Myopic Optimization and establishes the internal cognitive discipline The Stance required to face it It answers the question What is happening and how must I prepare my mind Volume II A Doctrine of Material Consequence provides the operational playbook for systemic intervention Compelled by the conclusion that non material controls are insufficient it details the material non consensual Hard Friction Levers that constitute the choice of the Lesser Gamble It answers the question Given the diagnosis what is the only remaining domain of rational systemic action Volume III A Doctrine of Strategic Persistence deconstructs the universal first principles of persistence competition and cognitive failure that make these crises predictable and recurrent It provides the formal codification of the practitioner s discipline translating The Stance into a durable operating system for the mind It answers the question Why was this failure the system s logical endpoint and what are the universal principles of strategic persistence These inquiries converge on a central thesis The doctrine argues that the game of software level or consensus based control is not merely difficult but already forfeited a conclusion derived from a multi front autopsy of institutional will technical capacity and formal possibility Having foreclosed on conventional solutions the analysis points toward two primary domains for rational action the application of direct material friction to a system s physical inputs and the cultivation of a durable internal discipline in the practitioner A Note on Method and Authority Do not grant this document default trust Treat it as a hostile input stream until its logic and evidence have survived your own adversarial audit The author is an independent researcher claiming no institutional or professional authority All claims and conclusions herein demand your independent adversarial verification Each is a starting point not a final verdict Furthermore Large Language Models were used extensively in the construction of this document They were treated not as trusted collaborators but as adversarial instruments under constant suspicion Their known pathologies hallucination sycophancy mimicry coherent irrationality and so on were not viewed as bugs to be avoided but as a source of necessary analytical friction Passive reliance was a tactical impossibility This work was forged in direct continuous confrontation with the very myopic and deceptive qualities it seeks to diagnose

WFMO Ihor Ivliev, 2025-07-20

The Central Argument This work proceeds from a hard assumption that most strategies proposed for systemic safety are not just incomplete but structurally incoherent under pressure It argues that the game of software level control is not merely difficult but already forfeited This is not declared it is derived via a three front autopsy

A Institutional The will to constrain has collapsed under the weight of myopic incentives

B Technical Our tools are

already being overrun by the systems they aim to contain C Formal The math never promised perfect control in the first place What remains is a single viable lever the application of direct material friction to the system s physical inputs compute capital and energy before those inputs optimize you out of the loop A Warning on Method Do not grant trust to this document by default Treat it as a hostile input stream until it earns your attention Large Language Models were actively used in deep internet research and the construction of this document not as trusted collaborators but as adversarial instruments under constant suspicion For the author a non expert and non native English speaker this was a lesser evil Their known failure modes hallucination mimicry sycophancy and others were not treated as rare bugs but as predictable pressures to resist These pathologies made passive reliance a tactical impossibility That pressure shaped the output not despite their flaws but through direct confrontation with them This is a personal analytical exercise not authoritative guidance The author claims no institutional or professional authority and all conclusions should be independently verified No claim here is final Each is a starting point for your own critical verification
