Risks Dangers And Rewards In The Nova Scotia Offshore Fishery:

Risks, Dangers, and Rewards in the Nova Scotia Offshore Fishery Marian Binkley,1995 Risks Dangers and Rewards in the Nova Scotia Offshore Fishery describes the hidden cost paid by workers in the Nova Scotia offshore fishery a cost measured not in dollars and cents but in deaths and injuries [New Directions in Anthropology and Environment](#) Carole L. Crumley,2002-05-09 Carole L Crumley has brought together top scholars from across anthropology in a benchmark volume that displays the range of exciting new work on the complex relationship between humans and the environment Continually pursuing anthropology s persistent claim that both the physical and the mental world matter these environmental scholars proceed from the holistic assumption that the physical world and human societies are always inextricably linked As they incorporate diverse forms of knowledge their work reaches beyond anthropology to bridge the sciences social sciences and the humanities and to forge working relationships with non academic communities and professionals Theoretical issues such as the cultural dimensions of context knowledge and power are articulated alongside practical discussions of building partnerships research methods and ethics and strategies for implementing policy New Directions in Environment and Anthropology will be important for all scholars and non academics interested in the relation between our species and its biotic and built environments It is also designed for classroom use in and beyond anthropology and students will be greatly assisted by suggested reading lists for their further exploration of general concepts and specific research Learn more about the author at the University of North Carolina Anthropology Department web pages *Handbook of Stress in the Occupations* Janice Langan-Fox,Cary L. Cooper,2011-01-01 The Handbook of Stress in the Occupations sets a new agenda for stress research and gives fresh impetus to scholars who wish to focus on issues and problems associated with specific jobs some of which have received little attention in the past Written by researchers who are true experts in the field of each occupation this comprehensive Handbook reviews stress in a wide range of jobs including transport education farming fishing oil rig drilling finance law enforcement fire fighting entrepreneurship music social services prisons sport and health including surgery internship dentistry nursing paramedics psychiatry and social work Several occupations such as oil rig drilling are reviewed these jobs have always been stressful but have received little attention by researchers and only now receive more focus due to the Bay of Mexico accident Other occupations demand more of our attention because there have been substantial technological changes in particular jobs such as in dentistry nursing and surgery This lucid and insightful compendium will be a source of inspiration for those in the helping professions and all those individuals working in the industries described in the book More specifically the Handbook will strongly appeal to human resource specialists psychologists occupational health and safety professionals managers nurses and therapists Written in highly accessible language it will also provide rich reading to lay audiences including job incumbents themselves as well as specialists in industry and academia Academics and postgraduate students of business management and psychology will find plenty of

detailed information regarding stress associated with occupations **Changing Climate, Changing Worlds** Meredith Welch-Devine, Anne Sourdri, Brian J. Burke, 2020-04-07 This book explores how individuals and communities perceive and understand climate change using their observations of change in the world around them Because processes of climatic change operate at spatial and temporal scales that differ from those of everyday practice the phenomenon can be difficult to understand However flora and fauna which are important natural and cultural resources for human communities do respond to the pressures of environmental change Humans in turn observe and adapt to those responses even when they may not understand their causes Much of the discussion about human experiences of our changing climate centers on disasters and extreme events but we argue that a focus on the everyday on the microexperiences of change has the advantage of revealing how people see feel and make sense of climate change in their own lives The chapters of this book are drawn from Asia Europe Africa and South and North America They use ethnographic inquiry to understand local knowledge and perceptions of climate change and the social and ecological changes inextricably intertwined with it Together they illustrate the complex process of coming to know climate change show some of the many ways that climate change and our responses to it inflict violence and point to promising avenues for moving toward just and authentic collaborative responses *Red Flags and Lace Coiffes* Charles R. Menzies, 2011-08-01 This book explores the question of why fishing communities continue their struggle to survive despite often calamitous changes in ecology and economy Using historical ethnography as a lens through which to understand how fishers of the Bigouden region of France and their families have reinvented themselves Menzies argues that local identity plays an important role in their perseverance as global capitalist pressures continually force them to reorganize or disappear entirely Touching on many concepts that are fundamental to anthropology culture identity kinship work political economy and globalization and filled with personal stories and warmth this ethnography will be a welcome teaching tool for instructors and an enticing read for students Marine Fisheries Review ,2005 **Set Adrift** Marian Elizabeth Binkley, 2002-01-01 Comparing and contrasting the households of deep sea and coastal fishers Binkley illustrates the daily dependence of husbands upon their wives labour and ability to adapt to often difficult and precarious living conditions Nova Scotia Historical Review ,1994 **Married Women and Property Law in Victorian Ontario** Anne Lorene Chambers, Osgoode Society for Canadian Legal History, 1997-01-01 A meticulously researched and revisionist study of the nineteenth century Ontario s Married Women s Property Acts They were important landmarks in the legal emancipation of women **Fish for Life** J. Kooiman, 2005 An interdisciplinary survey addressing the problems of overfishing worldwide and the best way forward toward good ecological practice and global cooperative governance **Fisheries** Nelson F. McManus, David S. Bellinghouse, 2009 A fishery is an area with an associated fish or aquatic population which is harvested for its value commercial recreational subsistence It can be saltwater or freshwater wild or farmed Examples are the salmon fishery of Alaska the cod fishery off the Lofoten islands or the tuna fishery of the Eastern Pacific Most fisheries are marine

rather than freshwater most marine fisheries are based near the coast This is not only because harvesting from relatively shallow waters is easier than in the open ocean but also because fish are much more abundant near the coastal shelf due to coastal upwelling and the abundance of nutrients available there However productive wild fisheries also exist in open oceans particularly by seamounts and inland in lakes and rivers Most fisheries are wild fisheries but increasingly fisheries are farmed Farming can occur in coastal areas such as with oyster farms but more typically occur inland in lakes ponds tanks and other enclosures This book is devoted to the management economics and perspectives of fisheries
