*Risk Management of Water Supply and Sanitation Systems* Petr Hlavinec,Cvetanka Popovska,Ivana Mahrikova,Tamara Kukharchyk,2009-04-28 Each year more than 200 million people are affected by floods tropical storms droughts earthquakes and also operational failures wars terrorism vandalism and accidents involving hazardous materials These are part of the wide variety of events that cause death injury and significant economic losses for the countries affected

In an environment where natural hazards are present local actions are decisive in all stages of risk management in the work of prevention and mitigation in rehabilitation and reconstruction and above all in emergency response and the provision of basic services to the affected population Commitment to systematic vulnerability reduction is crucial to ensure the resilience of communities and populations to the impact of natural and manmade hazards Current challenges for the water and sanitation sector require an increase in sustainable access to water and sanitation services in residential areas where natural hazards pose the greatest risk In settlements located on unstable and risk prone land there is growing environmental degradation coupled with extreme conditions of poverty that increase vulnerability The development of local capacity and risk management play vital roles in obtaining sustainability of water and sanitation systems as well as for the communities themselves Unfortunately water may also represent a potential target for terrorist activity or war conflict and a deliberate contamination of water is a potential public health threat An approach which considers the needs of communities and institutions is particularly important in urban areas affected by armed conflict Risk management for large rehabilitation projects has to deal with major changes caused by conflict damaged or destroyed infrastructure increased population corrupt or inefficient water utilities and impoverished communities Water supply and sanitation are amongst the first considerations in disaster response The greatest water borne risk to health in most emergencies is the transmission of faecal pathogens due to inadequate sanitation hygiene and protection of water sources However some disasters including those involving damage to chemical and nuclear industrial installations or involving volcanic activity may create acute problems from chemical or radiological water pollution Sanitation includes safe excreta disposal drainage of wastewater and rainwater solid waste disposal and vector control This book is based on the discussions and papers prepared for the NATO Advanced Research Workshop that took place in Ohrid Macedonia under the auspices of the NATO Security Through Science Programme and addressed problems Risk management of water supply and sanitation systems impaired by operational failures natural disasters and war conflicts The main purpose of the workshop was to critically assess the existing knowledge on Risk management of water supply and sanitation systems with respect to diverse conditions in participating countries and promote close co operation among scientists with different professional experience from different countries The ARW technical program comprised papers on 4 topics a Vulnerability of Wastewater and Sanitation Systems b Vulnerability of Drinking Water Systems c Emergency response plans and d Case studies from regions affected by Drinking Water System Wastewater and Sanitation System failures

Communicating Therapeutic Risks Louis A. Morris, 2012-12-06 I guess everyone has a cousin Ernest He is the fellow of whom your mother asks Why can t you be more like your cousin Ernest Cousin Ernest went to the high school for genius children and got all A s even in French As the years went by I lost contact with Cousin Ernest Then last year at a family gathering I met him again Sure enough he had gone to Harvard and become a doctor a radiologist We began discussing his practice and he mentioned that he performs some fairly risky diagnostic tests

While legally he was compelled to tell patients about the risks they were undertaking he said that risk disclosure was a useless exercise No one has ever refused to undergo the procedure he said It was difficult to argue with his observation that no patient ever refused to undergo his tests I understood that the lack of refusals did not necessarily mean that risk disclosure was a useless exercise but his underlying argument was quite compelling
