Risky Agricultural Markets:

Risky Agricultural Markets Pasquale L Scandizzo, Peter B R Hazell, Jock Anderson, 2019-07-11 This book shows how decisions made by individual farmers influence the efficiency of agricultural markets Unless farmers properly take account of the correlation between prices and yields in forming their price forecasts competitive markets will often be socially inefficient leading to misallocation of resources The authors demonstrate that a simple and practical price forecasting rule based on expected per unit revenue is generally adequate to ensure efficient market behavior Time series data from various countries are used to test the hypothesis that market supply is influenced by the correlation of price and yield as well as by lagged market prices The importance of market inefficiencies in risky situations is shown to depend on the variability of yields the nature of farmers price forecasting behavior the degree of private risk aversion and the elasticity of demand The authors suggest and evaluate three basic policy approaches governments may take when confronted with very inefficient markets establishing production quotas improving market information services and implementing price stabilization schemes They conclude by discussing implications of the study for the specification of agricultural supply models and for the economic appraisal of risky investment projects

Managing Weather and Climate Risks in Agriculture Mannava VK Sivakumar,Raymond P. Motha,2008-01-10 In many parts of the world weather and climate are one of the biggest production risks and uncertainty factors impacting on agricultural systems performance and management Both structural and non structural measures can be used to reduce the impacts of the variability including extremes of climate resources on crop production While the structural measures include strategies such as irrigation water harvesting windbreaks etc the non structural measures include use of seasonal to interannual climate forecasts improved application of medium range weather forecasts and crop insurance This book based on an International Workshop held in New Delhi India should be of interest to all organizations and agencies interested in improved risk management in agriculture *Income Risk Management in Agriculture* OECD,2000-12-11 These OECD workshop proceedings examine the various risk strategies used by farm households in particular those attracting renewed interest such as diversification of income sources vertical co ordination hedging on futures markets insurance coverage and public safety nets *Quantitative Risk Management in Agricultural Business* Hirbod Assa,Peng Liu,Simon Wang,2025-05-02 This open access volume explores the cutting edge of quantitative methods in agricultural risk management and insurance Composed of insightful articles authored by field experts focusing on innovation recent advancements and the use of technology and data sciences it bridges the gap between theory and practice through empirical studies concrete examples and case analyses Evolving challenges in risk management have called for the development of new groundbreaking models Beyond presenting the theoretical foundations of these models this book discusses their real world applications providing tangible insights into how innovative modeling can elevate risk management strategies in the agricultural sector The latest risk management tools incorporate novel concepts such as index insurance price index risk management frameworks and risk pools The practical implications of these approaches are investigated and their impact on contemporary agricultural risk mitigation and insurance practices is examined Field experiences illustrate the implementation of these tools and their resulting outcomes Modern data analysis techniques in agricultural risk and insurance include machine learning spatial

Just, Rulon D. Pope, 2013-11-11 After all the research on agricultural risk to date the treatment of risk in agricultural research is far from harmonious Many competing risk models have been proposed Some new methodologies are largely untested Some of the leading empirical methodologies in agricultural economic research are poorly suited for problems with aggregate data where risk averse behavior is less likely to be important This book is intended to i define the current state of the literature on agricultural risk research ii provide a critical evaluation of economic risk research on agriculture to date and iii set a research agenda that will meet future needs and prospects This type of research promises to become of increasing importance because agricultural policy in the United States and elsewhere has decidedly shifted from explicit income support objectives to risk related motivations of helping farmers deal with risk Beginning with the 1996 Farm Bill the primary set of policy instruments from U S agriculture has shifted from target prices and set aside acreage to agricultural crop insurance Because this book is intended to have specific implications for U S agricultural policy it has a decidedly domestic scope but clearly many of the issues have application abroad For each of the papers and topics included in this volume individuals have been selected to give the strongest and broadest possible treatment of each facet of the problem The result is this comprehensive reference book on the economics of agricultural risk **Managing Risk in Agriculture A Holistic Approach** OECD, 2009-09-18 This book examines the current magnitude and characteristics of risk related policies in agriculture and what is known about the quantitative size of agricultural risks It also looks at the on farm off farm and market instruments available to manage risk Innovative risk management strategies in rural and agriculture finance Food and Agriculture Organization of the United Nations, 2018-08-10 The regional study collects and analyzes recent innovative risk transfer and sharing strategies used by private or public financial institutions and enterprises leading agricultural investments in Asia It makes an illustration of the channels through which recent strategies overcome obstacles for the delivery of various financial services to agribusinesses such as long term loans savings insurance hedging instruments and leasing An explanation of the context in which these strategies seem to work is provided in addition to those constraints that currently limit further outreach to the agribusiness sector specially to smaller agro enterprises with growth potential where poorer rural households participate **Agricultural Risk Transfer** Roman Marco Hohl, 2019-03-25 Gain a holistic view of agricultural re insurance and capital market risk transfer Increasing agricultural production and food security remain key challenges for mankind In order to meet global food demand the Food

and Agriculture Organisation estimates that production has to increase by 50% by 2050 and requires large investments. Agricultural insurance and financial instruments have been an integral part to advancing productivity and are becoming more important in increasingly globalized and specialized agricultural supply chains in the wake of potentially more frequent and severe natural disasters in today's key producing markets. Underwriting pricing and transferring agricultural risks is complex and requires a solid understanding of the production system exposure perils and the most suitable products which vastly differ among developed and developing markets. In the last decade new insurance schemes in emerging agricultural markets have greatly contributed to the large growth of the industry from a premium volume of US 10.1 billion 2006 to US 30.7 billion 2017. This growth is bound to continue as insurance penetration and exposure increase and new schemes are being developed. Agricultural reinsurance has become a cornerstone of sovereign disaster risk financing frameworks. Agricultural Risk Transfer introduces the main concepts of agricultural reinsurance and capital market risk transfer that are discussed through industry case studies. It also discusses best industry practices for all main insurance products for crop livestock aquaculture and forestry risks including risk assessment underwriting pricing modelling and loss adjustment. Describes agricultural production risks and risk management approaches. Covers risk transfer of production and financial risks through insurance and financial instruments. Introduces modelling concepts for the main perils and key data sources that support risk transfer through indemnity and index based products. Describes risk pricing and underwriting approaches for crop livestock aquaculture and forestry exposure in developed and developing agricultural systems. Become familiar with risk transfer concepts to reinsurance and capital markets. Get to know the current market landscape and main risk transfer products for individual producers agribusinesses and governments through theory and comprehensive industry case studies. Through Agricultural Risk Transfer you will gain a holistic view of agricultural reinsurance and capital market solutions which will support better underwriting more structured product development and improved risk transfer.
