Smalley, 1966 **Frugivory and seed dispersal: ecological and evolutionary aspects** T.H. Fleming, Alejandro Estrada, 2012-12-06 Any scientific discipline needs a theoretical framework to guide its development and to sharpen the questions its researchers pursue In biology evolution is the grand theoretical framework and an his torical perspective is necessary to understand present day biological conditions In its formative years the modern study of the fruit frugivore mutualism was guided by the specialist generalist paradigm developed by D Snow D McKey and H Howe Howe reviews the current status of this evolution ary paradigm and points out that it has been dismissed by many workers before being adequately tested This is because ecologists working with the tropical plants and frugivorous birds for which the paradigm

was originally developed rarely measure the seed dispersal effectiveness of different disperser species He indicates that this paradigm still has heuristic value and suggests that several additional ecological paradigms including the concept of keystone species of plants and frugivores and the role that frugivores play in density dependent mortality in tropical trees are worth studying The concept of seed dispersal quality has been central to discussions of fruit frugivore coevolution Schupp thoroughly reviews data bearing on this concept constructs a hierarchical framework for viewing disperser effectiveness and points out that disperser effectiveness depends on both the quantity and quality of seed dispersal Effectiveness in turn affects both evolutionary and ecological relationships between dispersers and their food plants **Introductory Spatial Analysis**

David Unwin, 2024-06-29 First published in 1981 Introductory Spatial Analysis uses ideas from dimensional analysis and stochastic process theory to provide a consistent logical framework for map analysis Geography is about maps so the saying goes yet there is no other textbook for geography students that combines the discussion of maps with a treatment of quantitative methods of map analysis This book differs from most other quantitative or cartographic geography texts in three respects first it is a geography not a statistics book and therefore problems are examined by looking at the types of data used and the varieties of maps drawn and then at the analytical procedures that may be used to detect significant spatial patterns second no attempt is made to introduce tests that treat data without reference to their spatial location and third no advice is offered on specifically cartographic questions of map drawing and design David Unwin's text will serve as a valuable introduction to the techniques of spatial analysis that are so important in contemporary geographical study **Skiing**

, 1997-11 Mountains & Man Larry W. Price, 1981 This book explores the complex processes and features of mountain environments glaciers snow and avalanches landforms weather and climate vegetation soils and wildlife A major section analyzes the effects of latitudinal position on these processes and features There is also an investigation of the origin of mountains our attitudes towards them and their manifold implications for us Inside front jacket *Annual Report* Ohio State Board of Agriculture, 1876
