Mathematics in Population Biology Horst R. Thieme, 2018-06-05 The formulation analysis and re evaluation of mathematical models in population biology has become a valuable source of insight to mathematicians and biologists alike This book presents an overview and selected sample of these results and ideas organized by biological theme rather than mathematical concept with an emphasis on helping the reader develop appropriate modeling skills through use of well chosen and varied examples Part I starts with unstructured single species population models particularly in the framework of continuous time models then adding the most rudimentary stage structure with variable stage duration The theme of stage structure in an age dependent context is developed in Part II covering demographic concepts such as life expectation and variance of life length and their dynamic consequences In Part III the author considers the dynamic interplay of host and parasite populations i e the epidemics and endemics of infectious diseases The theme of stage structure continues here in the analysis of different stages of infection and of age structure that is instrumental in optimizing vaccination strategies Each section concludes with exercises some with solutions and suggestions for further study The level of mathematics is relatively modest a toolbox

provides a summary of required results in differential equations integration and integral equations In addition a selection of Maple worksheets is provided The book provides an authoritative tour through a dazzling ensemble of topics and is both an ideal introduction to the subject and reference for researchers Quantitative Methods Louise Swift,Sally Piff,2014-06-06 The new edition of this highly successful and popular textbook is a comprehensive easy to follow guide to using and interpreting all the quantitative techniques that students will encounter in their later business and financial careers from fundamental principles through to more advanced applications Topics are explained in a clear friendly step by step style accompanied by examples exercises and activities making the text ideal for self tuition or for the student with no experience or confidence in working with numbers This highly successful learning by doing approach coupled with the book s clear structure will enable even the most maths phobic student to understand these essential mathematical skills Comprehensive in both its scope of coverage and the range of abilities it caters for this remains a core textbook for undergraduate students of business management and finance for whom Quantitative Methods modules will be a key component It will also appeal to those on related MBA and postgraduate courses New to this Edition Business Modelling Moving on feature with integrated web and book activities to promote student engagement with the application of mathematical techniques in real life workplaces Extensive revamp of two Statistics chapters based on student and lecturer feedback Crucial updated practical guides to using Excel and SPSS Integrated companion website resources helps relate theory to real world examples Accompanying online resources for this title can be found at bloomsburyonlineresources.com/quantitative-methods-4e These resources are designed to support teaching and learning when using this textbook and are available at no extra cost

Interfaces: Modeling, Analysis, Numerics Eberhard Bänsch,Klaus Deckelnick,Harald Garcke,Paola Pozzi,2023-10-10 These lecture notes are dedicated to the mathematical modelling analysis and computation of interfaces and free boundary problems appearing in geometry and in various applications ranging from crystal growth tumour growth biological membranes to porous media two phase flows fluid structure interactions and shape optimization We first give an introduction to classical methods from differential geometry and systematically derive the governing equations from physical principles Then we will analyse parametric approaches to interface evolution problems and derive numerical methods which will be thoroughly analysed In addition implicit descriptions of interfaces such as phase field and level set methods will be analysed Finally we will discuss numerical methods for complex interface evolutions and will focus on two phase flow problems as an important example of such evolutions *Mapping Equity and Quality in Mathematics Education* Bill Atweh,Mellony Graven,Walter Secada,Paola Valero,2011-01-06 Concerns about quality mathematics education are often posed in terms of the types of mathematics that are worthwhile and valuable for both the student and society in general and about how to best support students so that they can develop this mathematics Concerns about equity are about who is excluded from the opportunity to develop quality mathematics within our current practices and systems and about how to remove social

barriers that systematically disadvantage those students This collection of chapters summarises our learning about the achievement of both equity and quality agendas in mathematics education and to move forward the debate on their importance for the field
