Enhancement of Industrial Energy Efficiency and Sustainability

Andrea Trianni, 2021-09-02 Industrial energy efficiency has been recognized as a major contributor in the broader set of industrial resources to improved sustainability and circular economy. Nevertheless, the uptake of energy efficiency measures and practices is still quite low due to the existence of several barriers. Research has broadly discussed them together with their drivers. More recently, many researchers have highlighted the existence of several benefits beyond mere energy savings stemming from the adoption of such measures for several stakeholders involved in the value chain of energy efficiency solutions. Nevertheless, a deep understanding of the relationships between the use of the energy resource and other resources in industry together with the most important factors for the uptake of such measures also in light of the implications on the industrial operations is still lacking. However, such understanding could further stimulate the adoption of solutions for improved industrial energy efficiency and sustainability.

Management of Weather and Climate Risk in the Energy Industry Alberto Troccoli, 2009-12-21 Meteorological and climate data are indeed essential both in day to day energy management and for the definition of production and distribution infrastructures For instance the supply of electricity to users can be disturbed by extreme meteorological events such as thunderstorms with unusually strong winds severe icing severe cold spells sea level elevation associated with storm surges floods To be protected against such events it is not sufficient to act after they have taken place It is necessary to identify their potential impacts precisely and assess the probability of their occurrence This book shows that this can only be done through an enhanced dialogue between the energy community and the climate and meteorology community This implies an in depth dialogue between actors to define precisely what kind of data is needed and how it should be used M t o France has been in long term cooperation with the energy sector including the fields of electricity production and distribution Drawing on this experience it should be noted in this respect the importance of lo term partnership between actors as exemplified here by the message of EDF
