Information Systems for Engineering and

Infrastructure Asset Management Abrar Haider, 2012-11-08 Engineering and infrastructure assets maintain the lifeline of economies. It is therefore critical to manage these assets in such a way that they provide a consistent level of service throughout their lifecycle. Management of asset lifecycle however is information intensive and utilises a plethora of information systems. The role of these systems in asset management is much more profound. It extends beyond the organizational boundaries and addresses business relationships with external stakeholders to deliver enhanced level of business outcomes. In doing so, information systems are not only required to translate business strategic considerations into action but are also expected to produce learnings and feedback that informs business strategy and aids in strategic reorientation.
