System of Human Activity Systems Takafumi Nakamura, 2023-11-30 This book has unique features that set it apart from conventional books on the prevention of system failures in that it provides a method that views human activities from a meta methodological perspective based upon an interdisciplinary understanding of human activities With these characteristics the book also proposes a common methodological basis to apply to various problems surrounding society today such as an aging social infrastructure the safety of food medicine and public transportation and the creation of sustainable electricity and cybersecurity Furthermore since the

failure of human activities is expressed in a three dimensional space and the topological metrics are implemented the failure trajectories can be quantitatively monitored in time series to take effective preventive measures Considering the implementation of the topological metrics the causes of each failure are classified into two dimensions of the degree of coupling between system elements and the interaction between the target system and the external environment Owing to the nature of the introduction of topological metrics all individual and diverse systems can share general topological metrics Consequently understanding various failures over cross industries is possible with the use of common meta systemic language and mutual learning between different industries and the solution of social problems can be effectively achieved A system of system failures SOSF proposed and confirmed the effectiveness of this meta methodology for information and communication technologies ICT systems and the SOSF is extended to human activity systems SOHAS system of human activity systems as a whole Therefore the SOHAS becomes an academic foundation for theoretical research on meta methodology and it has an impact on practitioners to prevent system failures by accumulating knowledge of failures and learning from other industries Handbook of Investigation and Effective CAPA Systems Jose (Pepe)
