Sustainable Utilization and Conservation of Plant Genetic Diversity Jameel M Al-Khayri, Shri Mohan Jain, Suprasanna Penna, 2024-03-28 This book collates a wide spectrum of topics relevant to contemporary research achievement in sustainable utilization of plant genetic resources and conservation of plant genetic diversity within the framework of different crop systems It introduces the

status of crop genetic diversity and provides prospects for conservation of crop genetic diversity for sustainable agriculture. Plant genetic diversity is crucial for food security and agro ecosystem maintenance paving ways to achieve sustainable agriculture development. This necessitates consciously and judiciously the conservation of all existing plant genetic resources for sustainable use in a variety of applications for human welfare. The wild and traditional landraces have generated an increased interest as a repertoire of valuable traits for breeding and improvement of cultivated germplasm. Internationally concerted actions and policies toward for the conservation and management of plant genetic diversity are mounting from the organization levels to national policies as deemed appropriate for the sustainable development goals. This needs an understanding of genetic diversity of different crops, ecological drivers and the structural changes within genetic diversity due to climate change. It is also equally important to evolve knowledge on what, how and where to conserve the existing plant genetic resources for present and future use. Assessment of the genetic diversity presents in a wild and traditional agro ecosystem is another step towards effective utilization. In the past few years, advanced breeding tools have been developed which have offered great promise for efficient modification of targeted traits. This book consolidates current knowledge in the above core areas of plant genetic diversity and conservation. It is an essential reference for professionals, researchers, policy makers and commercial entrepreneurs concerned with plant genetic diversity and breeding to achieve enhanced agricultural productivity and sustainability of food resources to ensure food security. The book is also invaluable for graduate students involved in agriculture research.

Genetic Diversity and Erosion in Plants M. R. Ahuja, S. Mohan Jain, 2015-11-06. Genetic erosion is the loss of genetic diversity within a species. It can happen very quickly due to catastrophic events or changes in land use leading to habitat loss. But it can also occur more gradually and remain unnoticed for a long time. One of the main causes of genetic erosion is the replacement of local varieties by modern varieties. Other causes include environmental degradation, urbanization and land clearing through deforestation and brush fires. In order to conserve biodiversity in plants, it is important to target three independent levels that include ecosystems, species and genes. Genetic diversity is important to a species' fitness, long term viability and ability to adapt to changing environmental conditions. Chapters in this book are written by leading geneticists, molecular biologists and other specialists on relevant topics on genetic erosion and conservation of genetic diversity in plants. This divisible set of two volumes deals with a broad spectrum of topics on genetic erosion and approaches to biodiversity conservation in crop plants and trees. Volume 1 deals with indicators and prevention of genetic erosion while volume 2 covers genetic diversity and erosion in a number of plant species. These two volumes will also be useful to botanists, biotechnologists, environmentalists, policy makers, conservationists and NGOs working to manage genetic erosion and biodiversity.

Conserving Plant Genetic Diversity in Protected Areas José María Iriondo, Nigel Maxted, Mohammad Ehsan Dulloo, 2008-01-01.
