Managing Operational Risk in Financial Markets Amanat Hussain, 2000-05-01 Risk Management is one of the biggest issues facing the financial markets today Managing Operational Risk in Financial Markets outlines the major issues for risk management and focuses on operational risk as a key activity in managing risk on an enterprise wide basis While risk management had always been an integral part of financial activity the 1990s has seen the requirement for risk management establish itself as a key function within banks and other financial

institutions With greater emphasis on ensuring that money is not lost through adverse market conditions counterparty failure or inappropriate controls systems or people risk management has become a discipline in its own right Managing risk is now THE paramount topic within the financial sector Recurring major losses through the 1990s has shocked financial institutions into placing much greater emphasis on risk management and controls The collapse of Barings and losses made by Metallgesellschaft Orange County Diawa and Sumitomo as a result of a lack of procedures systems or managerial control has demonstrated to organisations the need to broaden the scope of their risk management activity from merely looking at market and credit risk This has brought into focus the need for managing operational risk Operational risk can only be managed on an enterprise wide basis as it includes the entire process of policies culture procedures expertise and systems that an institution needs in order to manage all the risks resulting from its financial transactions In fact in order to effectively manage market and credit risks it is necessary to have the relevant skills and expertise in the staff technical and organisational infrastructure as well as monitoring and control systems As all of these are components of operational risk it then becomes apparent that an integrated risk management approach needs to focus on operational risk Provides a comprehensive framework for the management of operational risk Defines the spectrum of risks faced by organisations and how they can effectively manage these Develops an enterprise wide risk information system and defines the major challenges that need to be addressed in developing such a system

[ITS Sensors and Architectures for Traffic Management and Connected Vehicles](#) Lawrence A. Klein, 2017-08-07. An intelligent transportation system (ITS) offers considerable opportunities for increasing the safety, efficiency, and predictability of traffic flow and reducing vehicle emissions. Sensors or detectors enable the effective gathering of arterial and controlled access highway information in support of automatic incident detection, active transportation and demand management, traffic adaptive signal control, and ramp and freeway metering and dispatching of emergency response.

providers As traffic flow sensors are integrated with big data sources such as connected and cooperative vehicles and cell phones and other Bluetooth enabled devices more accurate and timely traffic flow information can be obtained The book examines the roles of traffic management centers that serve cities counties and other regions and the collocation issues that ensue when multiple agencies share the same space It describes sensor applications and data requirements for several ITS strategies sensor technologies sensor installation initialization and field testing procedures and alternate sources of traffic flow data The book addresses concerns related to the introduction of automated and connected vehicles and the benefits that systems engineering and national ITS architectures in the US Europe Japan and elsewhere bring to ITS Sensor and data fusion benefits to traffic management are described while the Bayesian and Dempster Shafer approaches to data fusion are discussed in more detail ITS Sensors and Architectures for Traffic Management and Connected Vehicles suits the needs of personnel in transportation institutes and highway agencies and students in undergraduate or graduate transportation engineering courses
