Software Maintenance - A Management Perspective Phaneendra Nath Vellanky, 2007-10-23 Computer systems play an important role in our society Software drives those systems Massive investments of time and resources are made in developing and implementing these systems Maintenance is inevitable It is hard and costly Considerable resources are required to keep the systems active and dependable We cannot maintain software unless maintainability characters are built into the products and processes There is an urgent need to reinforce software development practices based on quality and reliability principles Though maintenance is a mini development lifecycle it has its own problems Maintenance issues need corresponding tools and techniques to address them Software professionals are key players in maintenance While

development is an art and science maintenance is a craft We need to develop maintenance personnel to master this craft Technology impact is very high in systems world today We can no longer conduct business in the way we did before That calls for reengineering systems and software Even reengineered software needs maintenance soon after its implementation We have to take business knowledge procedures and data into the newly reengineered world Software maintenance people can play an important role in this migration process Software technology is moving into global and distributed networking environments Client server systems and object orientation are on their way Massively parallel processing systems and networking resources are changing database services into corporate data warehouses Software engineering environments rapid application development tools are changing the way we used to develop and maintain software Software maintenance is moving from code maintenance to design maintenance even onto specification maintenance Modifications today are made at specification level regenerating the software components testing and integrating them with the system Eventually software maintenance has to manage the evolution and evolutionary characteristics of software systems Software professionals have to maintain not only the software but the momentum of change in systems and software In this study we observe various issues tools and techniques and the emerging trends in software technology with particular reference to maintenance We are not searching for specific solutions We are identifying issues and finding ways to manage them live with them and control their negative impact

Multidisciplinary Systems Engineering James A. Crowder, John N. Carbone, Russell Demijohn, 2015-12-23 This book presents Systems Engineering from a modern multidisciplinary engineering approach providing the understanding that all aspects of systems design systems software test security maintenance and the full life cycle must be factored in to any large scale system design up front not factored in later It lays out a step by step approach to systems of systems architectural design describing in detail the documentation flow throughout the systems engineering design process It provides a straightforward look and the entire systems engineering process providing realistic case studies examples and design problems that will enable students to gain a firm grasp on the fundamentals of modern systems engineering Included is a comprehensive design problem that weaves throughout the entire text book concluding with a complete top level systems architecture for a real world design problem

Collaborative Design Management Stephen Emmitt, Kirti Ruikar, 2013-04-12 The design process has always been central to construction but recent years have seen its significance increase and the ways of approaching it multiply To an increasing degree other stakeholders such as contractors have input at the design stage and the designer's role includes tasks that were traditionally the realm of other professions This presents challenges as well as opportunities and both are introduced discussed and analysed in Collaborative Design Management Case studies from the likes of ARUP Buro Happold VINCI Construction UK Ltd and CIOB show how technologies BIM podcasting innovative working information management collaboration and the evolution of roles the designer contractor interface environmental compliance have changed design management as a process Starting from a
