What Counts as Mathematics? Gail E. FitzSimons, 2005-12-15 J R GEN MAASS WOLFGANG SCHL GLMANN THEORY AND PRACTICE OF MATHEMATICS EDUCATION FOR ADULTS Our world is dominated by technological developments The philosopher Heinz H Ismann wrote that Atom Gen and Bit are the three basic principles now see H Ismann 1985 Each of the so called new technologies is based upon mathematics The first computer was built as a part of the Manhattan Project to calculate models of the atomic bomb The human genome project uses computers very often to find out the structure of the genome And computers are mathematical machines materialised mathematics Social organisations companies and not least governments use computers to process information A precondition for this is to

formalise the social or economical structure which produces the information This formalisation is a type of mathematisation too The social and economical models of organisations or companies are a part of the process of mathematising the world Last but not least mathematics is a part of everyday life and work People handle money buy things do handywork at home measure areas to paint and so on All together mathematics is not only the basis for technology economy work and everyday life but a part of our culture It seems clear that everyone in our society should know more about this
