**Asia-Pacific Conference on Science and Management of Coastal Environment**  
Yuk-Shan Wong,Nora Fung-Yee Tam,2012-12-06 Human beings have a long historical relationship with the coast Initially it provided food and security later forming important locations for industrial and commercial development Now the emphasis has shifted towards leisure and conservation although the former functions remain crucial However it is only very recently

that people have started viewing the coast as a common and valuable resource that requires rational utilisation and scientific management in order to sustain its attractiveness. Of course enlightened management comes only through understanding of the complicated coastal regions which enables coastal managers to balance pressures from different sectors and to minimize risks. Scientific knowledge will continue to be the most important basis for resolving the conflicts between coastal users and interest groups such as developers and ecologists. Coastal management has also shifted from traditional restorative or remedial actions towards planned avoidance of other conflicts. Despite rapid advancement in coastal sciences over recent decades most of the major coastal issues have remained outstanding in the agenda. Control of shoreline erosion and protecting sea level rise continue to be crucial problems facing coastal scientists. Destructive coastal storms still cause tremendous damage particularly in low altitudes. Wetland and estuary reclamation have led to the loss of the most valuable estuary wetlands which are required to sustain biological productivity and biodiversity. This volume includes papers on marine and coastal pollution, eutrophication, aquaculture, conservation and utilization of coastal wetlands and coastal zone management.

A wide variety of topics is included in the book: Engineering Education, Education Engineering, and Technology Methods and Learning Mechanism. *Bibliography of Agriculture with Subject Index*, 2000

Handbook of Environmental Impact Assessment, Volume 2 Judith Petts, 2009-04-01 Environmental Impact Assessment (EIA) is a significant anticipatory environmental management tool. International debate focuses on its enhancement to meet the challenges of sustainable development as well as demands for scientifically robust integrated and participative decision making. This handbook hopes to improve practices by contributing an international multidisciplinary ready reference source to this debate. Volume I addresses EIA principles, process and methods. Part 1 maps the EIA process and its impact on decision. It positions EIA in the context of sustainable development and relative to other decision tools including economic valuation. It also positions strategic environmental assessment (SEA) in a similar way. Part 2 addresses the elements of the EIA process and significant impact assessment topics: air, water, ecological, social, risk, landscape and visual, not only in terms of good practice but also methodological evolution. This volume concludes by addressing cumulative impact assessment and SEA methods. Volume II provides a unique consideration for EIA implementation and practice in Europe, Africa, the Far East, South America and North America. It uses a number of project types to provide how-to-do guidance and addresses practice in policy and plan assessment. This book should be read by legislators, decision makers, economists, developers, industrial managers and consultants involved in this significant field. **Environmental Impact Assessment**
