Manipulation of Growth in Farm Animals J.F. Roche,D. O'Callaghan,2012-12-06 In some countries especially on the European continent there still exists a remarkable veal market This type of meat production seems irrespective of any economic forecasts to remain unchallenged so long as consumers expect that restaurants should offer courses like r6ti de veaux vitello a la casa or Kalbsschnitzel Producers at least since about the past 1 2 decades have been aware of the beneficial effect of anabolic agents in veal production This is possible due to the lack of endogenous sexual hormones during the juvenile or prepuberal status of these animals A discussion about the benefit risk evaluation in connection with the use of anabolic agents in general was promoted in recent years by the public This concern occurred concomitantly with the detection of illegally treated veal calves and the occurrence of diethylstilbestrol DES residues in canned food containing veal The aim of this paper is to summarize the present status of residue data in edible tissues and excreta in order to allow the evaluation of the risk given in the paper of Hoffmann within this program and to consider reasonable monitoring measures We have to face the fact that without an efficient control system the illegal treatment of calves can not be excluded Therefore this paper will not only consider different compounds and formulations but will also deal with practised routes of administration

Animal Growth Regulation Dennis R. Campion, Gary J. Hausman, Roy J. Martin, 2013-11-11 The biotechnological advances of recent years have put us on the brink of unprecedented gains in animal productivity Manipulation of animal growth rate and composition of gain is now possible by a variety of techniques Examples include ingestion of beta adrenergic agonists injection of somatotropin castration immunization and gene insertion Animal Growth Regulation addresses modern concepts of growth regulation with an emphasis on agriculturally important animals This emphasis is not exclusive as many situations exist in which the only information available was generated in other species and this information has been included for the sake of clarity and completeness However because of the overall orientation of this volume particular attention has been given to the regulation of skeletal muscle adipose tissue and bone growth Certain hormones and growth factors have a profound influence on growth regulation and this basic physiological knowledge is being harnessed to manipulate growth Thus considerable emphasis has been given to growth hor
