**British Medical Journal** ,1929      *The Art and Science of Making the New Man in Early 20th-Century Russia* Yvonne Howell,Nikolai Krementsov,2021-12-02 The idea that morally mentally and physically superior new men might replace the currently existing mankind has periodically seized the imagination of intellectuals leaders and reformers throughout history This volume offers a multidisciplinary investigation into how the new man was made in Russia and the early Soviet Union in the first third of the 20th century The traditional narrative of the Soviet new man as a creature forged by propaganda is challenged by the strikingly new and varied case studies presented here The book focuses on the interplay between the rapidly developing experimental life sciences such as biology medicine and psychology and countless cultural products ranging from film and fiction dolls and museum exhibits to pedagogical projects sculptures and exemplary agricultural fairs With contributions from scholars based in the United States Canada the UK Germany and Russia the picture that emerges is emphatically more complex contradictory and suggestive of strong parallels with other new man visions in Europe and elsewhere In contrast to previous interpretations that focused largely on the apparent disconnect between utopian new man rhetoric and the harsh realities of everyday life in the Soviet Union this volume brings to light the surprising historical trajectories of new man visions their often obscure origins acclaimed and forgotten champions unexpected and complicated results and mutual interrelations In short the volume is a timely examination of a recurring theme in modern history when dramatic advancements in science and technology conjoin with anxieties about the future to fuel dreams of a new and improved mankind

**Muted Consent** Jan Wojcik,1978-06 When we are patients few of us understand the implications and risks of the complex procedures modern medicine has developed for curing diseases and altering consciousness and human biology Here is a book that attempts to clarify the issues raised by such complexities The work is a primer in the language of medical ethics a language we must understand if we are to make sense out of the private and public dilemmas modern medical progress is bringing our way At the beginning of each chapter three fictional cases illustrate dilemmas that can arise in one of seven areas of modern medicine experimentation with human subjects genetic counseling and screening abortion behavior modification with drugs surgery and psychology treatment of the dying and dead allocation of scarce medical resources and genetic engineering These fictional cases lead into a review of a broad range of thinking about the ethics involved From the facts given the reader is equipped to form an opinion in each case The book draws no conclusions

**Identified Flying Objects** Dr. Michael P. Masters,2019-03-22 Could UFOs and Aliens simply be us but from the future This provocative new book cautiously examines the premise that extraterrestrials may instead be our distant human descendants using the anthropological tool of time travel to visit and study us in their own hominin evolutionary past Dr Michael P Masters a professor of biological anthropology specializing in human evolutionary anatomy archaeology and biomedicine explores how the persistence of long term biological and cultural trends in human evolution may ultimately

result in us becoming the ones piloting these disc shaped craft which are likely the very devices that allow our future progeny to venture backward across the landscape of time Moreover these extraterrestrials are ubiquitously described as bipedal large brained hairless human like beings who communicate with us in our own languages and who possess technology advanced beyond but clearly built upon our own These accounts coupled with a thorough understanding of the past and modern human condition point to the continuation of established biological and cultural trends here on Earth long into the distant human future

**The Ages of the X-Men** Joseph J. Darowski, 2014-07-08 The X Men comic book franchise is one of the most popular of all time and one of the most intriguing for critical analysis With storylines that often contain overt social messages within its mutant metaphor X Men is often credited with having more depth than the average superhero property In this collection each essay examines a specific era of the X Men franchise in relationship to contemporary social concerns The essays are arranged chronologically from an analysis of popular science at the time of the first X Men comic book in 1963 to an interpretation of a storyline in light of rhetoric of President Obama s first presidential campaign Topics ranging from Communism to celebrity culture to school violence are addressed by scholars who provide new insights into one of America s most significant popular culture products

**In the Name of Eugenics** Daniel J. Kevles, 1995 A rich narrative about the science of improving the human race from the 19th century to genetic engineering today

**Race to the Finish** Jenny Reardon, 2009-02-09 In the summer of 1991 population geneticists and evolutionary biologists proposed to archive human genetic diversity by collecting the genomes of isolated indigenous populations Their initiative which became known as the Human Genome Diversity Project generated early enthusiasm from those who believed it would enable huge advances in our understanding of human evolution However vocal criticism soon emerged Physical anthropologists accused Project organizers of reimporting racist categories into science Indigenous rights leaders saw a Vampire Project that sought the blood of indigenous people but not their well being More than a decade later the effort is barely off the ground How did an initiative whose leaders included some of biology s most respected socially conscious scientists become so stigmatized How did these model citizen scientists come to be viewed as potential racists even vampires This book argues that the long abeyance of the Diversity Project points to larger fundamental questions about how to understand knowledge democracy and racism in an age when expert claims about genomes increasingly shape the possibilities for being human Jenny Reardon demonstrates that far from being innocent tools for fighting racism scientific ideas and practices embed consequential social and political decisions about who can define race racism and democracy and for what ends She calls for the adoption of novel conceptual tools that do not oppose science and power truth and racist ideologies but rather draw into focus their mutual constitution

Benjamin J. Hurlbut, 2017-01-31 Human embryo research touches upon strongly felt moral convictions and it raises such deep questions about the promise and perils of scientific progress that debate over its development has become a moral and political imperative. From in vitro fertilization to embryonic stem cell research, cloning and gene editing, Americans have repeatedly struggled with how to define the moral status of the human embryo, whether to limit its experimental uses and how to contend with sharply divided public moral perspectives on governing science. *Experiments in Democracy* presents a history of American debates over human embryo research from the late 1960s to the present, exploring their crucial role in shaping norms, practices, and institutions of deliberation governing the ethical challenges of modern bioscience. J. Benjamin Hurlbut details how scientists, bioethicists, policymakers, and other public figures have attempted to answer a question of great consequence: how should the public reason about aspects of science and technology that effect fundamental dimensions of human life? Through a study of one of the most significant science policy controversies in the history of the United States, *Experiments in Democracy* paints a portrait of the complex relationship between science and democracy and of U.S. society's evolving approaches to evaluating and governing science's most challenging breakthroughs. *Bulletin of the Atomic Scientists*, 1971-12 The *Bulletin of the Atomic Scientists* is the premier public resource on scientific and technological developments that impact global security. Founded by Manhattan Project Scientists, the *Bulletin*'s iconic Doomsday Clock stimulates solutions for a safer world. *Readings in evolution, genetics, and eugenics*, 1921 *Readings in Evolution, Genetics, and Eugenics* Horatio Hackett Newman, 1922 **Congressional Record** United States. *Human Origins and the Image of God* Lilley & Pedersen, eds., 2017 How did human beings originate? What, if anything, makes us unique? These questions have long been central to philosophers, theologians, and scientists. This book continues that robust interdisciplinary conversation with contributions from an international team of scholars whose expertise ranges from biology and anthropology to philosophical theology and ethics. The fourteen chapters in this volume are organized around Wentzel van Huyssteen's pioneering work in human rationality, embodiment, and evolutionary history. Bringing a variety of diverse perspectives to bear on a hotly debated issue, *Human Origins and the Image of God* showcases new research by some of today's finest scholars working on questions regarding human origins and human uniqueness.
