Mans Place In Evolution:

Evidence as to Mans Place in Nature by Thomas Henry Huxley Thomas Henry Huxley, 1863 **Evidence as to Man's Place in Nature** Thomas Henry Huxley, 2019-11-26 In *Evidence as to Man's Place in Nature* Thomas Henry Huxley presents a meticulously crafted argument that places humans within the broader context of the natural world. Written during the late 19th century, a period marked by significant advancements in evolutionary theory, Huxley employs a scholarly yet accessible style to draw on anatomical, paleontological, and embryological evidence. With rigorous analysis, he examines the similarities between humans and other primates, ultimately arguing for humans' evolutionary heritage in a way that engages with and challenges contemporary thought, particularly in the wake of Darwinian theories. Huxley, often referred to as Darwin's Bulldog for his advocacy of evolution, was an influential biologist and philosopher whose background in comparative anatomy and zoology profoundly shaped his perspective. His commitment to empirical evidence and scientific inquiry set him against the prevailing creationist views of his time, leading him to explore the implications of evolution not only for science but also for society and philosophy. His experiences and education culminated in this seminal work, positioning him as a pivotal figure in the acceptance of evolutionary theory. This book is essential for readers interested in the intersections of science, philosophy, and theology. Huxley's clear reasoning and passionate defense of evolution not only present a compelling case for human origins but also encourage reflection on humanity's place within the broader tapestry of life. *Evidence as to Man's Place in Nature* is a vital reading for anyone eager to understand the scientific underpinnings of human identity and existence.

Man's Place in Nature Thomas Henry Huxley, 1903 [Evolution and Man's Place in Nature](#) Henry Calderwood, 1893 *Man's Place in Nature* Thomas H. Huxley, 2012-08-08 Thomas H. Huxley was one of the first supporters of Charles Darwin's theory of evolution by natural selection, and he did more than any other writer to advance its acceptance among scientists and nonscientists alike. His most famous book, *Man's Place in Nature*, published only five years after Darwin's *The Origin of Species*, offers a compelling review of primate and human paleontology and is the first attempt to apply Darwin's theory to human beings. As compelling a piece of analysis now as it was 140 years ago, *Man's Place in Nature* is a must for every science lover's library.

Eugène Dubois and the Ape-Man from Java L.T. Theunissen, 2012-12-06 Although the name Pithecanthropus is now seldom used there are few who study the origin of our species who will fail to recognise the historical place of the usage and its association with Eugene Dubois During the last thirty or forty years Australopithecus and its African context has tended to draw attention from the early work on our origins in Java It is now increasingly common to hear the term pithecanthropine used only to indicate the Asian or Far Eastern examples of Homo erectus which although probably derived from African ancestry have some features that in the opinion of some experts may justify their being considered distinctive This discussion is not within the pages that follow which deal extensively with the work of Eugene Dubois He was an extraordinary man who did as much as any person since to put the great antiquity of our ancestors firmly in the public domain Dubois became involved with the study of human origins from a medical and anatomical background as have many since The jealousies and professional pressures that we think of as a phenomenon of the post war years were clearly a major factor in deciding the future of his career
