Mycobacteria And Human Disease:

The Anonymous Mycobacteria in Human Disease John Stewart Chapman, 1960 *The Atypical Mycobacteria and Human Mycobacteriosis* John Chapman, 2012-12-06 Nearly twenty years ago a symposium convened at Dallas Texas to consider the place of atypical mycobacteria among agents of human disease An edited and condensed version of that symposium was subsequently published and since that time has constituted the only bound source of information covering broad aspects of mycobacterial disease In the years since a vast amount of information has accumulated in periodical literature some of which is not readily accessible The time seems suitable for a comprehensive collection of this scattered material into a single book The aim has not been to produce an exhaustive account of mycobacteria and mycobacterioses but rather to concentrate on salient points and particularly on those most generally useful to a diverse group of interests mycobacteriology pathology epidemiology and of course clinical fields In Appendix A there appear in summary form manifestations of mycobacteria as they have occurred among clinical specialties such as orthopedic surgery dermatology and urology These summaries are designed to serve as guides to more probable infections and to lead to more extensive reading with respect to the specific organism encountered Appendix C presents also in summary form drugs regimens duration of treatment and toxicities to permit ready reference to less familiar anti microbial agents These are suggestive only useful when the general nature of the organism is known but not the specific susceptibility of the individual strain **Mycobacteria and Human Disease, 2Ed** John Grange, 1996-05-31 The mycobacteria cause two of the world's most serious infections tuberculosis and leprosy as well as a range of infections which occur particularly in HIV AIDS patients This 2nd edition has been completely revised by John Grange one of the leading world authorities on the subject and addresses the major developments in the subject over the last decade advances in drug treatment of leprosy tuberculosis and other mycobacterial diseases the introduction of monoclonal antibodies cell cloning techniques and genetic engineering techniques Mycobacteria and Human Disease provides a comprehensive review of the mycobacteria their place in the environment the way in which they interact with the living host the nature of the diseases they cause and the available means of diagnosing preventing and curing such disease for medical microbiologists in practice and training *Mycobacteria and Human Disease* John M. Grange, 1988-01 *The Ecology of Mycobacteria: Impact on Animal's and Human's Health* Jindrich Kazda, Ivo Pavlik, Joseph O. Falkinham III, Karel Hruska, 2010-06-10 habitats and the overlapping of these biotopes by humans and animals contributed to the spread of mycobacteria and perhaps to their convergence to pathogenicity It was not our intention to present a compendium covering all published results but rather to issue a readable book which is illustrative and thus focused on the principle facts The increase in the number of Editors has allowed the sharing of original experiences regarding the ecology of mycobacteria published here for the first time in some cases The supplemented edition should serve as a guide to these discoveries and also contribute to an understanding of clinically significant species in human and animal medicine Borstel Germany January 2009

Jindrich Kazda Editors Comments The editors responsible for the chapters are listed under the title of each chapter Authors are listed under the titles of subchapters The references are listed as they appear in the databases Reference Manager Thomson Reuters Philadelphia as imported from Web of Science Thomson Reuters Philadelphia or PubMed Medline NLM Bethesda A few citations not indexed were cited according to the reprints or books available This principle resulted in minor differences in the titles not all reference titles are in English some references have capitalized title words not all species names are according to the contemporary nomenclature and in italics Some journals are cited with abbreviated titles some in full as available in the source databases These differences were left in the format of the database *Tuberculosis, Leprosy and Mycobacterial Diseases of Man and Animals* Harshini Mukundan, Mark Chambers, Ray Waters, Michelle Larsen, 2015-09-28 Mycobacteria are bacterial pathogens which cause diseases in humans and non human animals This monograph will primarily cover the most important and widely researched groups of mycobacteria members of the Mycobacterium tuberculosis complex MTC and Mycobacterium leprae across a wide range of host species M tuberculosis and M bovis are particularly relevant with the increasing drug resistance and co infection with HIV associated with M tuberculosis and the possible cross infection of badgers and cattle associated with M bovis This book will provide a reference for researchers working in different fields creating a work which draws together information on different pathogens and by considering the diseases in a zoonotic context provides a One Health approach to these important groups of diseases

Mycobacteria and Human Disease John Grange, 1988-04 *Diseases and Human Evolution* Ethne Barnes, 2005 Barnes a paleopathologist offers general overviews of specific diseases West Nile virus Lyme disease Ebola HIV AIDS tuberculosis cholera etc and their carriers **Mycobacterial Skin Diseases** Marwali Harahap, 2012-12-06 We have endeavoured in this book to bring the reader up to date information which will contribute to an enhanced ability to diagnose and treat mycobacterial skin diseases This volume is mainly concerned with conveying to dermatologists microbiologists immunologists dermatologists in training registrars in other specialties and interested family practitioners a concise appraisal of some recent developments in the various aspects of myco bacterial skin diseases The chapters dealing with bacteriology pathology and immunology have been planned to appear at the beginning of the book to provide the necessary conceptual framework for the section on clinical science which deals with the variety of clinical states The value of the clinical descriptions is vastly enhanced by a careful reading of the earlier chapters The contributing authors have been most cooperative in making this the tenth volume in the New Clinical Applications in Dermatology series an excellent treatise I thank each of them for their superb contributions If this book stimulates and encourages a greater interest in and a better understanding of mycobacterial skin diseases and enables physicians to serve more effectively those who suffer the time and effort spent to produce it will be amply rewarded PROFESSOR MARWALI HARAHAP IX SERIES EDITOR S FOREWORD It was with great pleasure that I heard of Professor Harahap s wish to produce a volume on mycobacterial skin diseases

Iron as Therapeutic Targets in Human Diseases Paolo Arosio, Maura Poli, Raffaella Gozzelino, 2020-02-11 Iron is an essential element for almost all organisms a cofactor playing a crucial role in a number of vital functions including oxygen transport DNA synthesis and respiration However its ability to exchange electrons renders excess iron potentially toxic since it is capable of catalyzing the formation of highly poisonous free radicals As a consequence iron homeostasis is tightly controlled by sophisticated mechanisms that have been partially elucidated Because of its biological importance numerous disorders have been recently linked to the deregulation of iron homeostasis which include not only the typical disorders of iron overload and deficiency but also cancer and neurodegenerative diseases This leads iron metabolism to become an interesting therapeutic target for novel pharmacological treatments against these diseases Several therapies are currently under development for hematological disorders while other are being considered for different pathologies The therapeutic targeting under study includes the hepcidin ferroportin axis for the regulation of systemic iron homeostasis complex cytosolic machineries for the regulation of the intracellular iron status and its association with oxidative damage and reagents exploiting proteins of iron metabolism such as ferritin and transferrin receptor A promising potential target is a recently described form of programmed cell death named ferroptosis in which the role of iron is essential but not completely clarified This Special Issue has the aim to summarize the state of the art and the latest findings published in the iron field as well as to elucidate future directions

Community-Acquired Pneumonia

Thomas J. Marrie, 2007-05-08 Pneumonia along with influenza is the sixth leading cause of death in adults About 4 million adults develop pneumonia each year in the US resulting in 64 million days of restricted activity 39 million days of bed confinement and 10 million days of lost work Yet the admission rates to hospital length of stay investigations antimicrobial therapy and prevention strategies vary greatly from one geographic area to the next and the scientific basis for many of our management strategies for pneumonia is weak to nonexistent There are over 100 microbial agents that can cause pneumonia and many of these especially *Streptococcus pneumoniae* Group A streptococcus and *Staphylococcus aureus* are in a state of flux in terms of changing antimicrobial resistance This book is designed to provide new information about pneumonia and identify critical research questions that will come to the fore as we enter the 21st century *Textbook of Microbiology*
