Myotatic, Kinesthetic and Vestibular Mechanisms A. V. S. de Reuck, Julie Knight, 2009-09-16 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world Myotatic, Kinesthetic and Vestibular Mechanisms Anthony V. S. De Reuck, Julie Knight, 1967 **Myotatic, Kinesthetic and Vestibular Mechanisms** Symposium on myotatic, kinesthetic and vestibular mechanisms\$ (1966 : London), 1967

Myotatic, Kinesthetic and Vestibular Mechanisms: Ciba Foundation Symposium kinesthetic and vestibular mechanisms Symposium on myotatic (london, 1967), 1967 Myotatic, Kinesthetic and Vestibular Mechanisms , 1967 **Basic Aspects of Central Vestibular Mechanisms** , 1972-01-01 Basic Aspects of Central Vestibular Mechanisms Vestibular System Part 1: Basic Mechanisms H.H. Kornhuber, 2012-12-06 The details of the receptor mechanism are not yet fully understood for any sensory system However sufficient data are available for the vestibular system and for other systems to permit meaningful tracking of the sensory messages through the nervous system and via conscious experience The reception process ing storage and output of information in man and other animals as done by means of receptors neurons secretory cells and muscle fibers are collectively referred to as mind Sensory physiologists tend to disbelieve in extrasensory perception Sensory physiology in general is an area upon which different sciences and methods converge Anatomists physiologists psychologists physicists chemists and engineers have made important contributions to sensory physiology What is special about vestibular physiology is the fact that many research workers are clinicians living under the constant pressure of their patient s demands This is a disadvantage when it comes to writing handbooks but an advantage for the pa tient since research is guided by clinical practice and can be quickly applied Modern methods such as recording from single nerve units and the correlation of electrophysiological and psychophysical data have greatly contributed to our knowledge yet the study of lesions is still important especially in the vestibular field **Myotatic, Kinesthetic and Vestibular Mechanisms** Symposium of Myotatic, Kinesthetic and Vestibular Mechanisms, London, 1966, 1967 *Der Drehnystagmus / Acoustic Trauma and Cochlear Microcirculation* B. Kellerhals, R. Grohmann, 1972-12-13 The Human Hand as an Inspiration for Robot Hand Development Ravi Balasubramanian, Veronica J. Santos, 2014-01-03 The Human Hand as an Inspiration for Robot Hand Development presents an edited collection of authoritative contributions in the area of robot hands The results described in the volume are expected to lead to more robust dependable and inexpensive distributed systems such as those endowed with complex and advanced sensing actuation computation and communication capabilities The twenty four chapters discuss the field of robotic grasping and manipulation viewed in light of the human hand s capabilities and push the state of the art in robot hand design and control Topics discussed include human hand biomechanics neural control sensory

feedback and perception and robotic grasp and manipulation This book will be useful for researchers from diverse areas such as robotics biomechanics neuroscience and anthropologists Motor Coordination Arnold L. Towe, Erich S.

Luschei, 2013-11-21 The focus of this volume differs from what is suggested by the series title for it is on muscle contraction and movement rather than on behavior The lone overnight flight of a ruby throated hummingbird across the Gulf of Mexico is a migratory behavior mediated through an incredibly lengthy repetitive series of wing movements each movement being produced by a complex sequence of muscle contractions It is significant that these same movements may be used to mediate other behaviors and that these same muscle contractions in different sequence may be used to produce other movements The immense journey of white bearded gnus across the Serengeti plains to suitable calving grounds is likewise a migratory behavior mediated through rather more varied yet repetitive limb movements each produced by a complex sequence of muscle contractions Again these same movements may be used to mediate other behaviors and again the details of each limb movement may be varied through variations in the strength and the sequence of muscle contractions A laboratory rat may learn to perform an escape behavior in a shuttle box bringing its performance to a high level of efficiency by modifying its movement on successive trials After intraperitoneal injection of pentobarbital sodium in an amount sufficient to render the animal severely incoordinated the escape behavior is still performed albeit through a different sequence of movements even to rolling out of the compartment in response to the warning signal Biomechanics III S. Barker, C.C. Hunt, A.K.

McIntyre, 2012-12-06 This section will consider the structure and function of muscle receptors as well as the central nervous system mechanisms with which they are concerned In volume I of this Handbook receptor mechanisms are discussed in detail Also the crustacean stretch receptor and the frog muscle spindle have been considered The present section will be concerned with vertebrate muscle receptors with an emphasis on mammals Muscle receptors provide interesting examples of specialized mechanoreceptors The muscle spindle is a striking case of a receptor which is regulated in its function by the central nervous system in efferent neurons Muscle receptors have long been known to play a crucial role in the reflex regulation of movement In recent years it has become apparent that these receptors are also important in sensory phenomena such as the perception of position and movement St Louis July 1974 c c HUNT Contents Chapter I The Morphology of Muscle Receptors By D BARKER With 99 Figures 1 Chapter II The Physiology of Muscle Receptors By C C HUNT With 21 Figures 191 Chapter III Central Actions of Impulses in Muscle Afferent Fibres By A K McINTYRE With 8 Figures 235 Author Index 289 Subject Index 299 List of Contributors BARKER David Department of Zoology University of Durham Science Laboratories South Road Durham DH1 3LE Great Britain HUNT Carlton C Department of Physiology and Biophysics Washington University School of Medicine 660 South Euclid Avenue St Louis Mo 63110 USA McINTYRE A K

Physiological Approach to Clinical Neurology James W. Lance, 2013-10-22 A Physiological Approach to Clinical Neurology deals with the mechanism of various neurological symptoms and signs in terms of disordered physiology Topics covered by this book include pain and other sensations weakness the tendon jerk and the stretch reflex and disordered control of motor neurons The disorders of basal ganglia and cerebellum are also considered along with consciousness and unconsciousness the mechanism of epilepsy and the relationship between brain and mind This book is comprised of 11 chapters and begins by introducing the reader to the clinical analysis of sensory and motor disorders The discussion then turns to the perception of pain and other kinds of sensation the clinical approach to the problem of weakness and the clinical significance of the tendon jerk In the chapters that follow appraisal of a neurophysiological thought is applied to common neurological disorders such as Parkinson's disease hemiballismus epilepsy and developmental anomalies like platybasia The last chapter explores the phenomena of mind and its connection to the brain as well as its influence on the body paying particular attention to perception memory and emotion This monograph is intended for those who are proceeding into the clinical years of a medical course to those who are studying for senior qualifications in internal medicine or neurology and to those who are merely curious about the cause of neurological phenomena that they observe daily in their patients

Control of Posture and Locomotion R. Stein, 2012-12-06 R B Stein Department of Physiology University of Alberta Edmonton Canada The impetus for this volume and the conference that gave rise to it was the feeling that studies on motor control had reached a turning point In recent years studies on motor units and muscle receptors have become increasingly detailed Attempts to integrate these studies into quantitative models for the spinal control of posture have appeared and

preliminary attempts have been made to include the most direct supraspinal pathways into these models see for example the chapters by Nashner and Melvill Jones et al in this volume Thus we felt that the time was ripe to summarize these developments in a way which might be useful not only to basic medical scientists but also to clinicians dealing with disorders of motor control and to bioengineers attempting to build devices to assist or replace normal control Over the past few years computer methods have also made possible increasingly detailed studies of mammalian locomotion and improved physiological and pharmacological studies have appeared There seems to be almost universal agreement now that the patterns for locomotion are generated in the spinal cord and that they can be generated with little if any phasic sensory information see chapters by Grillner and Miller et al This concludes a long controversy on whether chains of reflexes or central circuits generate stepping patterns The nature of the pattern generators in mammals remains obscure but invertebrate studies on locomotion have recently made striking advances

W.N. Tavolga, A.N. Popper, R.R. Fay, 2012-12-06 This volume is a compilation of the papers presented at a meeting that took place in April 1980 at the Mote Marine Laboratory Sarasota Florida The meeting and this volume are outgrowths of two earlier international meetings on marine bio acoustics that occurred in 1963 and 1966 Tavolga 1964 1967 The first meeting took place at the Lerner Marine Laboratory of the American Museum of Natural History while the second meeting was at the American Museum itself and was under the sponsorship of the Department of Animal Behavior It is apparent that these two volumes have had immense impact on the current study of marine bio acoustics and particularly on fish audition In a preliminary conference in Sarasota in 1979 we decided that it was time for another such meeting to bring together as many as possible of the investigators interested in fish acoustics in order to assess the current state of our knowledge and predict directions for research for the next several years Such a meeting appeared particularly timely since over the past four or five years there have been many new studies that have provided new empirical and theoretical work on basic mechanisms of fish audition Furthermore it became evident as we made up preliminary lists of possible participants that few of the currently active workers were in the field back in 1966 In fact of the current participants only Drs
