The Natural World: Chaos and Conservation Cecil E. Johnson, 1972 *Natural World* Cecil E. Johnson, 1972 **U.S. Environmental Protection Agency Library System Book Catalog Holdings as of July 1973** United States. Environmental Protection Agency. Library Systems Branch, 1974 EPA-600/5 , 1974-02 The Natural World: Chaos and Conservation , 1972 **Japan: Economic Growth, Resource Scarcity, And Environmental Constraints** Edward A. Olsen, 2019-03-04 This study evaluates from a neo Malthusian perspective Japan s current status and its prognosis in the context of the country s economic vulnerabilities Drawing on the theoretical contributions of Malthus N Georgescu Roegen H and M Sprout and assorted environmental ecological doomsayers the author reaches pessimistic conclusions about Japan s very long term prospects but holds out some slim hope for Japan if international cooperation of nearly Utopian dimensions can be achieved **Homesick** Lyla Yastion, 2018-09-15 Human induced climate change is emerging as the most critical issue of the modern era Ninety seven percent of climate scientists now confirm that human extraction and burning of fossil fuels along with rampant deforestation is causing a rapid build up of carbon dioxide and other greenhouse gases in air and water These emissions heat up the planet and may be pushing Earth s capacity beyond the threshold at which equilibrium can be restored Global warming is sustained by a global capitalist economy dependent upon the fossil fuel industry and agribusiness both of which are unsustainable The toxic effects of air pollution ocean acidification and soil degradation are harming the health of all species Through an interdisciplinary approach that brings in the perspectives of the physical sciences psychology anthropology economics cultural history and spirituality Homesick investigates the evolutionary path by which human beings have arrived at this precarious juncture It proposes that this perilous detour in human cultural evolution arises from a fallacious belief that the human species unlike other species is not bound by ecological laws but has a special right to control and master the natural world Human beings suffer from the illusion that they are separate from the Earth their planetary home which is perceived as an object a commodity to exploit through technology They have forgotten what indigenous peoples still remember humanity is part of not apart from the natural world Homesick argues that cultural transformation towards a sustainable future is possible when human beings reawaken to Nature as partner and provider As memory of their embeddedness in the natural world is aroused they will experience love and respect for the interdependent web of life that sustains them This reawakening incrementally induces a radical change in thinking within society and sets in motion a paradigm shift Cultural institutions are then reshaped to match this new benign worldview *Dictionary Catalog of the Department Library* United States. Environment Jules Pretty, 2006-06-23 This four volume set explores the locations where the environment matters most such as where people are poor where environments are under threat such as on frontiers where there are few natural resources remaining and where industrialization is rampant It will also explore these concerns at different system levels from local community to regional national and global It will also explore costs of damage to the very resources on which economies rely and the values of environmental goods and services and the controversies surrounding such valuations It is organized around environment people interactions livelihoods poverty income economic growth environment environment interactions do people matter and people people interactions collective action challenges institutions

Natural Visions Finis Dunaway, 2005-11-15 In *Natural Visions* Finis Dunaway tells the story of how visual imagery such as wilderness photographs New Deal documentary films and Sierra Club coffee table books shaped modern perceptions of the natural world By examining the relationship between the camera and environmental politics through detailed studies of key artists and activists Dunaway captures the emotional and spiritual meaning that became associated with the American landscape Throughout the book he reveals how photographers and filmmakers adapted longstanding traditions in American culture the Puritan jeremiad the romantic sublime and the frontier myth to literally picture nature as a place of grace for the individual and the nation Dust jacket

Greening Europe Anna-Katharina Wöbse, Patrick Kupper, 2021-12-20 Today the environment seems omnipresent in European policy within and beyond the European Union The idea of a shared European environment however has come a long way and is still being contested *Greening Europe* focuses on the many ways people have interacted with nature and made it an issue of European concern The authors ask how notions of Europe mattered in these activities and they expose the many entanglements of activists across the subcontinent who set out to connect and network and to exchange knowledge worldviews and strategies that exceeded their national horizons Moving beyond human agency the handbook also highlights the eminent role nature played in both greening Europe and making Europe a shared environment

Environmental Sociology Matthias Groß, Harald Heinrichs, 2010-06-17 Despite being a relatively young sub discipline European environmental sociology has changed considerably in the last decades towards more interdisciplinary collaborations and problem solving Current trends such as global environmental modernization and processes of economic political and socio cultural globalization fuelled by developments of transport environmental flows scientific uncertainty and information technologies have fostered new conceptual approaches that move beyond classical sociological mind sets toward broader attempts to connect to other disciplines

Conservation Biology Peggy L. Fiedler, 2012-12-06 John Harper Nature conservation has changed from an idealistic philosophy to a serious technology Ecology the science that underpins the technology of conservation is still too immature to provide all the wisdom that it must It is arguable that the desire to

conserve nature will in itself force the discipline of ecology to identify fundamental problems in its scientific goals and methods. In return, ecologists may be able to offer some insights that make conservation more practicable. Harper 1987. The idea that nature species or communities are worth preserving rests on several fundamental arguments, particularly the argument of nostalgia and the argument of human benefit and need. Nostalgia, of course, is a powerful emotion. With some notable exceptions, there is usually a feeling of dismay at a change in the status quo, whether it be the loss of a place in the country for walking or rambling, the loss of a painting or architectural monument, or that one will never again have the chance to see a particular species of bird or plant.

Contemporary Issues in Cultural Heritage Tourism Jamie Kaminski, Angela M Benson, David Arnold, 2013-12-13. The perceived quality of a destination's cultural offering has long been a significant factor in determining tourist choices of destination. More recently, the need to present touristic offerings that include cultural experiences and heritage has become widely recognised. That this aspect of the tourism experience is an important differentiator of destinations, as well as being amongst the most manageable, has also led to an increase in the management of such experiences through special exhibitions, events and festivals, as well as through ensuring more routine and controlled access to heritage sites. Reflecting the increasing application of cultural heritage as a driver for tourism and development, this book provides for the first time a cohesive volume on the subject that is theoretically rich, practically applied and empirically grounded. Written by expert scholars and practitioners in the field, the book covers a broad range of theoretical perspectives of cultural heritage tourism, regeneration, policy, stakeholders, marketing, socio-economic development, impacts, sustainability, volunteering and ICT. It takes a broad view, integrating international examples of sites, monuments, as well as intangible cultural heritage, motor vehicle heritage, events and modern art museums. This significant book furthers knowledge of the theory and application of tourism within the context of cultural heritage and will be of interest to students, researchers and practitioners in a range of disciplines.

Renewable Energies Matthias Gross, Rüdiger Mautz, 2014-09-15. Renewable Energy normally refers to usable energy sources that are an alternative to fossil sources but without the negatively evaluated consequences of the replaced fuels. Although energy issues have a long tradition in sociology and other social sciences, it may now be high time to conceptualize these in sociological terms as the lynchpin in our understanding of the way societies are set to develop in the 21st century. This concise book focuses on sociological attempts at better framing contemporary theories of energy transformations and to deliver an accessible overview on the relationships between different types of renewable energy sources and their practical usages in modern societies. A strong focus is laid upon new forms of environmental governance and unavoidable knowledge gaps triggered by attempts to transform contemporary energy systems to renewable ones. Critical topics include the challenge of transition from centralized to decentralized system structures, the integration of renewable energies into existing energy structures, or the replacement of these coping strategies to unforeseen risks and conflict issues, and socio-cultural reservations to new technologies connected to renewable

energies **Conservation** Helen Kopnina, Haydn Washington, 2019-08-05 This book provides keys to decrypt current political debates on the environment in light of the theories that support them and provides tools to better understand and manage environmental conflicts and promote environmentally friendly behaviour As we work towards global sustainability at a time when efforts to conserve biodiversity and combat climate change correspond with land grabs by large corporations food insecurity and human displacement While we seek to reconcile more than human relations and responsibilities in the Anthropocene we also struggle to accommodate social justice and the increasingly global desire for economic development These and other challenges fundamentally alter the way social scientists relate to communities and the environment This book takes as its point of departure today's pressing environmental challenges particularly the loss of biodiversity and the role of communities in protected areas conservation In its chapters the authors discuss areas of tension between local livelihoods and international conservation efforts between local communities and wildlife and finally between traditional ways of living and modernity The central premise of this book is while these tensions cannot be easily resolved they can be better understood by considering both social and ecological effects in equal measure While environmental problems cannot be seen as purely ecological because they always involve people who bring to the environmental table their different assumptions about nature and culture so are social problems connected to environmental constraints While nonhumans cannot verbally bring anything to this negotiating table aside from vast material benefits that society relies on the distinct perspective of this book is that there is a need to consider the role of nonhumans as equally important stakeholders albeit without a voice This book develops an argument that human environmental relationships are set within ecological reality and ecological ethics and rather than being mutually constitutive processes humans have obligate dependence on nature not vice versa This would enable an ethical position encompassing the needs of other species and giving simultaneous without one being subordinated to another consideration to justice for humans and non humans alike The book is accessible to both social scientists and conservation specialists and intends to contribute to strengthening interdisciplinary collaborations in the field of conservation
