Risk and Presidential Decision-making Luca Trenta, 2016-05-20 This book aims at gauging whether the nature of US foreign policy decision making has changed after the Cold War as radically as a large body of literature seems to suggest and develops a new framework to interpret presidential decision making in foreign policy It locates the study of risk in US foreign policy in a wider intellectual landscape that draws on contemporary debates in historiography international relations and Presidential studies Based on developments in the health and environment literature the book identifies the President as the ultimate risk manager demonstrating how a President is called to perform a delicate balancing act between risks on the domestic political side and risks on the strategic international side Every decision represents a risk vs risk trade off in which the management of one target risk leads to the development countervailing risks The book applies this framework to the study three major crises in US foreign policy the Cuban Missile Crisis the seizure of the US Embassy in Tehran in 1979 and the massacre at Srebrenica in 1995 Each case study results from substantial archival research and over twenty interviews with policymakers and academics including former President Jimmy Carter and former Senator Bob Dole This book is ideal for postgraduate researchers and academics in US foreign policy foreign policy decision making and the US Presidency as well as Departments and Institutes dealing with the study of risk in the social sciences The case studies will also be of great use to

Manni,S.I. Magalini,2012-12-06 C Manni The focusing of

general interest and of many disciplines on disaster medicine is an interesting and recent phenomenon in our society Disasters have by now left the historical and philosophical sphere and finally entered the operational arena Modern man in other words no longer accepts disasters in a passive and fatalistic manner but claims to be able to control them like so many other forces of nature The new approach is aimed at preventing containing and remedying the invariably tragic consequences of these events The role of medicine in this context is of fundamental importance and is characterized by two main aspects application of techniques of intervention appropriately and effectively and collaboration with the general organization assuming responsibility for the protection of health and the treatment of injuries Following a period of more or less chaotic growth during which sectionalism and empirical interests prevailed and localized aspects of this new discipline underwent considerable development a need is now felt to propose and realize a more comprehensive scientific approach It has become necessary to identify and to rationally analyze the individual components of this branch of medicine As in any analysis the recognition of the object of the research is of fundamental importance hence the title of this first round table

Information, Uncertainty and Fusion

Bernadette Bouchon-Meunier, Ronald R. Yager, Lotfi Zadeh, 2012-12-06 As we stand at the precipice of the twenty first century the ability to capture and transmit copious amounts of information is clearly a defining feature of the human race In order to increase the value of this vast supply of information we must develop means for effectively processing it Newly emerging disciplines such as Information Engineering and Soft Computing are being developed in order to provide the tools required Conferences such as the International Conference on Information Processing and Management of Uncertainty in Knowledge based Systems IPMU are being held to provide forums in which researchers can discuss the latest developments The recent IPMU conference held at La Sorbonne in Paris brought together some of the world's leading experts in uncertainty and information fusion In this volume we have included a selection of papers from this conference What should be clear from looking at this volume is the number of different ways that are available for representing uncertain information

This variety in representational frameworks is a manifestation of the different types of uncertainty that appear in the information available to the users Perhaps the representation with the longest history is probability theory This representation is best at addressing the uncertainty associated with the occurrence of different values for similar variables This uncertainty is often described as randomness Rough sets can be seen as a type of uncertainty that can deal effectively with lack of specificity it is a powerful tool for manipulating granular information Report of special study of securities markets of the Securities and Exchange Commission United States.
