Numerical Methods For The Euler Equation:

Numerical Methods for the Euler Equations of Fluid Dynamics F. Angrand, Institut National de Recherches en Informatique et Automatique. Workshop, 1985-01-01 **Numerical Methods for the Euler Equation** E. Turkel, 1986 Special Issue on Numerical Methods for the Euler Equation E. Turkel, International Association for Mathematics and Computers in Simulation, 1986 *Numerical Simulation of Compressible Euler Flows* Alain Dervieux, 2013-03-08

The numerical simulation of the Euler equations of Fluid Dynamics has been these past few years a challenging problem both for research scientists and aerospace engineers. The increasing interest of more realistic models such as the Euler equations originates in Aerodynamics and also Aerothermics where aerospace applications such as military aircrafts and also space vehicles require accurate and efficient Euler solvers which can be extended to more complicated modelisations including non equilibrium chemistry for supersonic and hypersonic flows at high angles of attack and Mach number regimes involving strong shocks and vorticity. This book contains the proceedings of the GAMM Workshop on the Numerical Simulation of Compressible Euler Flows that was held at INRIA Rocquencourt France on June 10-13 1986. The purpose of this event was to compare in terms of accuracy and efficiency several codes for solving compressible inviscid mainly steady Euler flows. This workshop was a sequel of the GAMM workshop held in 1979 in Stockholm. This time though because of the present strong activity in numerical methods for the Euler equations the full potential approach was not included. Since 1979 other Euler workshops have been organised several of them focussed on airfoil calculations however many recently derived methods were not presented at these workshops because among other reasons the methods were not far enough developed or had not been applied to flow problems of sufficient complexity. In fact the 1986 GAMM workshop scored very high as regards to the novelty of methods.

Numerical Solutions of the Euler Equations for Steady Flow Problems Albrecht Eberle, Arthur Rizzi, Ernst Heinrich Hirschel, 2013-04-17

The last decade has seen a dramatic increase of our abilities to solve numerically the governing equations of fluid mechanics. In design aerodynamics the classical potential flow methods have been complemented by higher modelling level methods Euler solvers and for special purposes already Navier Stokes solvers are in use. The authors of this book have been working on the solution of the Euler equations for quite some time. While the first two of us have worked mainly on algorithmic problems the third has been concerned off and on with modelling and application problems of Euler methods. When we started to write this book we decided to put our own work at the center of it. This was done because we thought and we leave this to the reader to decide that our work has attained over the years enough substance in order to justify a book. The problem which we soon faced was that the field still is moving at a fast pace for instance because hypersonic computation problems became more and more important.
