Numerical Simulation In Tunneling:

Numerical Simulation in Tunnelling Gernot Beer, 2012-12-06 For many years the Austrian tunneling industry has demanded that research is urgently required to establish a theoretical basis for the New Austrian Tunneling Method and to assist site engineers in the often difficult day to day decisions In particular it was felt that numerical models need to be improved considerably in order to be able to act as useful tools in predicting soil rock mass behavior during tunneling The required improvement not only refers to the quality of the models but also to their ease of use As long as an experienced modeler is required to spend days in preparing the input and in interpreting the results the models will not be useful at the tunnel site It is heartening therefore that a group of scientists in Austria has come together to attempt to tackle this challenging task The initiative has been supported in a number of ways by the Austrian tunneling industry All Austrian companies associated with tunneling sent representatives to the management advisory board which ensured that the research carried out in the project was of benefit to the industry The Austrian Geomechanics Society sponsored the project with a considerable amount which was mainly used to cover site costs HL AG and OSAG as well as the joint ventures allowed access to tunnel sites thereby making it possible to test new developments

Spatial Modelling and Failure Analysis of Natural and Engineering Disasters through Data-Based Methods, volume III Faming Huang, Jingjing Meng, Sansar Raj Meena, 2024-09-12. This Research Topic is Volume III of a series. The previous volume can be found here: Spatial Modelling and Failure Analysis of Natural and Engineering Disasters through Data-based Methods Volume II and Spatial Modelling and Failure Analysis of Natural and Engineering Disasters through Data-based Methods. Natural and engineering disasters, which include landslides, rock fall, rainstorm, dam failure, floods, earthquakes, road and building disasters, and wildfires, appear as results of the progressive or extreme evolution of climatic, tectonic and geomorphological processes and human engineering activities. It is significant to explore the failure mechanism and carry out spatial modeling of these engineering and natural disasters due to their serious harm to the safety of people's lives and property. The data-based methods, including advanced and successful remote sensing, geographic information systems, machine learning and numerical simulation techniques, are promising tools to analyze these complex disasters. Machine Learning models, such as neurofuzzy logic, decision tree, artificial neural network, deep learning and evolutionary algorithms, are characterized by their abilities to produce knowledge and discover hidden and unknown patterns and trends from large databases, whereas remote sensing and Geographic Information Systems appear as significant technology equipped with tools for data manipulation and advanced mathematical modeling. What is more, the numerical simulation can also be acknowledged as advanced technologies for discovering hidden failure mechanism of disasters. The main objective of this Research Topic is to provide a scientific forum for advancing the successful implementation of Machine Learning, ML and numerical simulation techniques in operation, rules, failure mechanism, spatial and time series prediction, susceptibility mapping, hazard assessment, vulnerability modeling, risk assessment and early warning of complex natural and engineering disasters.

Analytical Methods in Petroleum Upstream Applications Cesar Ovalles, Carl E. Rechsteiner Jr., 2015-04-02. Effective measurement of the composition and properties of petroleum is essential for its exploration, production and refining; however, new technologies and methodologies are not adequately documented in much of the current literature. Analytical Methods in Petroleum Upstream Applications explores advances in the analytical methods and instrumentation that allow more accurate determination of the components, classes of compounds, properties and features of petroleum and its fractions. Recognized experts explore a host of topics, including a petroleum
