Nutritional Biochemistry:

Nutritional Biochemistry Tom Brody, 1998-12-21 Nutritional Biochemistry takes a scientific approach to nutrition. It covers not just what nutritional requirements but why they are required for human health by describing their function at the cellular and molecular level. Each case study either leads to a subsequent discovery or enables an understanding of the physiological mechanisms of action of various nutrition-related processes. The text is picture-oriented and the commentary is directed towards explaining graphs, figures, and tables. Nutritional Biochemistry includes a discussion of relevant aspects of physiology, food chemistry, toxicology, pediatrics, and public health. Experimental techniques for nutritional science are emphasized, and primary data is included to help give students a feel for the nutrition literature. This real-world approach provides students with a realistic view of the basis for much of our understanding of nutritional biochemistry. Integrates biochemistry and nutrition in a case-oriented method. Emphasizes a hands-on approach to learning case histories and clinical and research data illustrate all major points. Places emphasis on metabolism, metabolic pathways, enzymology, nutrient requirements including RDA values. Reveals the benefits of the Mediterranean diet, the biochemistry of exercise, the cell signaling pathways, how nutrition can influence the development of cancer, and the anthropometry and genetics of obesity.

Nutritional Biochemistry: From the Classroom to the Research Bench Sami Dridi, 2022-03-14 Nutritional Biochemistry From the Classroom to the Research Bench aims to provide students and readers with a detailed, simplified, and comprehensive account of the relationship between nutrition and metabolism. A key feature of this textbook is a comparative approach on the subject of nutritional biochemistry which helps to explain the differences in metabolism, nutrient requirement, and sometimes in the molecular pathways between mammalian and non-mammalian species. Chapters give an overview of the need for food and water, chapter 1, before describing the cell and organ system components, chapter 2. The textbook then focuses on the regulation of food intake from the factors influencing appetite to the central and peripheral underlying mechanisms, chapters 3-5. Water intake and regulation in the body are covered, chapter 6, along with key topics of protein, carbohydrate, and lipid metabolism, chapters 7-9, including their digestion, absorption, transport, utilization, synthesis, degradation, and molecular regulation. A brief summary concludes the book, Chapter 10. This book serves as a textbook for students and faculty in beginner courses in biochemistry and nutrition and is designed to give learners a comprehensive understanding of the topic to help them when considering a career in research. *Nutritional Biochemistry* Tom Brody, 1999 This real-world approach allows students to come away with a realistically informed view of the basis for much of our understanding of nutritional biochemistry. **Food Chemistry and Nutritional Biochemistry** Charles Zapsalis, R. Nutritional Biochemistry of the Vitamins David A. Bender, 2003-09-18 The vitamins are a chemically disparate group of compounds whose only common feature is that they are dietary essentials that are required in small amounts for the normal functioning of the body and maintenance of metabolic integrity Metabolically they have diverse function as coenzymes hormones antioxidants mediators of cell signaling and regulators of cell and tissue growth and differentiation This book explores the known biochemical functions of the vitamins the extent to which we can explain the effects of deficiency or excess and the scientific basis for reference intakes for the prevention of deficiency and promotion of optimum health and well being It also highlights areas where our knowledge is lacking and further research is required It provides a compact and authoritative reference volume of value to students and specialists alike in the field of nutritional biochemistry and indeed all who are concerned with vitamin nutrition deficiency and metabolism
