Ontogeny of Receptors and Reproductive Hormone Action Terrell H. Hamilton, James H. Clark, William A. Sadler, 1979 Ontogeny of Receptors and Reproductive Hormone Action Terrell H. Hamilton, *Luteinizing Hormone Action and Receptors* Mario Ascoli, 2019-08-15 First published in 1985 The principle reason for publishing this book is to put together current knowledge about the actions of luteinizing hormone in a single volume **Knobil and Neill's Physiology of Reproduction** Ernst Knobil, 2006 The 3rd edition the first new one in ten years includes coverage of molecular levels of detail arising from the last decade's explosion of information at this level of organismic organization There are 5 new Associate Editors and about 2/3 of the chapters have new authors Chapters prepared by return authors are extensively revised Several new chapters have been added on the topic of pregnancy reflecting the vigorous investigation of this topic during the last decade The information covered includes both human and experimental animals basic principles are sought and information at the organismic and molecular levels are presented The leading comprehensive work on the physiology of reproduction Edited and authored by the world's leading scientists in the field Is a synthesis of the molecular cellular and organismic levels of organization Bibliographies of chapters are extensive and cover all the relevant literature

Biological Regulation and Development Robert F. Goldberger, Keith R. Yamamoto, 2013-11-21 The motivation for us to conceive this series of volumes on regulation was mainly our belief that it would be fun and at the same time productive to approach the subject in a way that differs from that of other treatises We thought it might be interesting and instructive for both author and reader to examine a particular area of investigation in a framework of many different problems Cutting across the traditional boundaries that have separated the subjects in past volumes on regulation is not an easy thing to do not because it is difficult to think of what interesting topics should replace the old ones but because it is difficult to find authors who are willing to write about areas outside those pursued in their own laboratories Anyone who takes on the task of reviewing a broad area of interest must weave together its various parts by picking up the threads from many different laboratories and attempt to produce a fabric with a meaningful design Finding persons who are likely to succeed in such a task was the most difficult part of our job In the first volume of this treatise most of the chapters dealt with the mechanisms of The second volume involved a somewhat regulation of gene expression in microorganisms broader area spanning the prokaryotic eukaryotic border Topics ranged from phage morphogenesis to the role of gradients in development The last volume Volume 3A concerned hormones as does this volume Volume 3B *Biochemical Actions of Hormones V9* Gerald Litwack, 2012-12-02 Biochemical Actions of Hormones Volume IX is an 11 chapter text that provides the developments in the theoretical and experimental understanding of hormonal actions and regulation After presenting an overview of research on

peptide and steroid hormones this volume goes on exploring the lipotropins and their active degradation products as well as the adenylate cyclase enzyme regulation by adrenergic receptors These topics are followed by discussions on the potassium ion conductance in the pancreatic beta cell the concept of the insulin sensitive chemoreceptor of the central nervous system the estrogen induced growth factors and their role in tumor cell growth and the nuclear acceptors for the avian progesterone receptor Other chapters consider the structural aspects of steroid hormones and their receptors with an emphasis on the importance of pyridoxal phosphate research studies on a better understanding of the steroid receptors function This book also looks into an affinity label for glucocorticoid receptors and the development of a polyclonal antibody for this receptor The concluding chapter emphasizes the regulation of the steroid sulfotransferases This volume will be of great value to biologists biochemists and researchers who are interested in the biochemical aspects of hormones Reproduction and Development B. Flerkó,G. Sétáló,L. Tima,2013-10-22 Advances in Physiological Sciences Volume 15 Reproduction and Development covers the proceedings of the symposia of the 28th International Congress of Physiology The book discusses several studies related to reproduction and development The opening chapter discusses findings in reproductive neuroendocrinology while the second chapter covers stimulatory and inhibitory analogs of LH RH The succeeding chapters are organized into four parts based on the topic of the papers Part 1 deals with the role of the hypothalamus in the regulation of LH and FSH secretion and Part 2 tackles gonadotropic and steroid hormone receptors Part 3 explains reproduction and development and Part 4 deals with contraception Researchers and professionals concerned with reproduction and development will find this book a great reference materials **Methods in Neuroendocrinology** Louis D. Van de Kar,2020-04-28 This book describes some of the many different disciplines that are involved in investigations of neuroendocrine control mechanisms It is intended for students pre and post doctoral fellows medical residents and others who are interested in neuroendocrine research *Ontogeny of receptors and reproductive hormone action editors, Terrell H. Hamilton, James H. Clark, William A. Sadler ,1979* Neuroendocrine Perspectives Eugenio E. Müller,Robert M. MacLeod,2012-12-06 This issue of Neuroendocrine Perspectives Volume 9 begins with a fascinating aspect of neurobiology the steroid control of vertebrate behavior in this case aggressive behavior In the first chapter Schlinger and Callard after an extensive historical perspective of the behavioral effects of steroid hormones review results of their own and others laboratories on the hormonal basis of individual and sex related differences in the intensity of aggressive displays in birds These studies provide evidence that brain aromatase exerts considerable control over both sex dependent and individual differences in aggressive behavior by controlling estrogen receptor occupancy in steroid sensitive brain regions A great deal of attention has been devoted to psychological socio economic and cultural factors as potential causes of drug abuse and dependence whereas the information on the neurobiologic effects of drugs of abuse is rather scanty Wand and Froehlich address this topic in an exhaustive chapter on the effects of ethanol on the release synthesis and posttranslational processing

of hypothalamo hypophyseal hormones In addition in keeping with neurophysiological and epidemiological evidence of a genetic susceptibility to alcohol addiction they present data to indicate how the neuroendocrine system may function as a marker for genetic susceptibility to ethanol addition **Hormone Action** Robert F. Goldberger, Keith R. Yamamoto, 1984

Advances in Neuroendocrine Physiology K. B. Ruf, G. Tolis, 1982-01-19 *Hormones and Aggressive Behavior* Bruce B. Svare, 2013-03-07 This volume is an overview of research examining the relationship between hormones and aggressive behavior The last 15 years have witnessed a tremendous growth of knowledge in this area yet reviews written by specialists are virtually nonexistent This work is an attempt to provide a comprehensive and cohesive synthesis of this literature Chapters 1-7 provide an analysis of hormonal influences on the major forms of aggressive behavior including intermale, interfemale, shock induced, maternal territorial and predatory aggression The focus of Chapters 8-12 is an examination of the mechanisms through which hormones might act to produce changes in agonistic responding Genetic, developmental, neural and biochemical influences are considered It is well known that environment, social context and experience modulate the effects of hormones on behavior Thus Chapters 13-15 are designed to review the literature concerning hormone-pheromone interactions, hormonal responses to competition and the influence of social context on the endocrine system and aggressive behavior Frequently the principles advanced by behavioral endocrinologists are based on research in one species, the rodent To provide a more comparative perspective and to examine specifically the generality of those principles generated for rodents Chapters 16-22 examine hormone-aggression relationships in a variety of species including fish, birds, amphibians, reptiles, infrahuman primates, humans, ungulates and insects This volume should be useful to both beginning and advanced researchers in animal behavior, behavioral endocrinology, physiological psychology, neuroendocrinology, zoology, physiology and psychiatry *Estrogen/Antiestrogen Action and Breast Cancer Therapy* Virgil Craig Jordan, 1986 This book marks one of the achievements of the Estrogen and Antiestrogen Action: Basic and Clinical Aspects Wisconsin Clinical Cancer Center conference in June 1984 It is not intended to be a recount of the meeting proceedings but is rather a historical review of the development of this field of endeavor during the past 30 years The chapters have been written by many of the leading experts in the field who were asked to recount the development of a particular area or laboratory idea in which they had been personally involved The book is intended to provide both scientists and clinicians with a single volume overview of both the basic principles of hormonal control of breast cancer and the recent clinical results from cooperative groups around the world **Female Sex Steroids** J.H. Clark, E.J. Peck, 2012-12-06 It is the object of this series of monographs to present the experiments and interpretations of a given laboratory We have attempted in this volume to present our view of receptor-steroid interactions and their relation to steroid induced responses This view is necessarily biased by our own experimental results While we have tried to include the views and results of others this volume is not meant to be comprehensive Rather it is selective and examines those topics within the general field of steroid hormone action which we have addressed at the

laboratory bench The work reviewed in this volume would not exist without the help and support of many associates Our mentors included Jorge Awapara Jack Gorski Henry Komer Bill Ray and Mike Zarrow Associates instrumental in this work include George Barr John Burgner Sam Campbell Constance Cardasis Hitkan Eriksson Stan Glasser Jim Hardin Mohammed Kalimi Bruce Lester Barry Markavarich Shirley McCormick Tony Means Dan Medina Ann Miller Bert O Malley Helen Padyku la Zigmund Paszko Dale Snow Susan Upchurch and Marian Walters Students who have contributed to this effort include John Anderson Joe DeLibero Aaron Hsueh Katrina Kelner Debbie Metzger Randy Richards Jim Schaeffer Mike Tytell Lane von Brunt and Cheryl Watson Technicians without whose assistance this work could not exist include Toni Cetti Wendy D Attilio Jeanie Haselby Lily Hsueh Helen Hyland Jim Kovar Kathy O Connor and Peggy Sansone **Research Awards Index** ,1988

Environmental Health Perspectives ,1993 **Molecular Endocrinology** Franklyn Bolander,2012-12-02 Molecular Endocrinology examines basic principles in molecular endocrinology using selected examples It looks at the molecular aspects of hormone action from hormone receptor interactions to second messenger generation gene induction and post transcriptional control It also explores the regulation of nuclear receptors and membrane receptors the nontranscriptional effects of hormones the modifications of histone and nonhistone protein the molecular evolution of the endocrine system and the molecular bases of endocrinopathies Organized into five sections comprised of 16 chapters this book begins with a brief summary of general endocrinology and then discusses the basic characteristics of hormones and their regulation illustrated by the hormonal control of calcium metabolism It explains other major endocrine systems including the hypothalamus pituitary gland and thyroid gland The remainder of the text focuses on receptors and how to determine their number and affinity the structure function and metabolism of nuclear and membrane receptors the mechanisms for the regulation of receptor activity the major second messengers such as cyclic nucleotides and how they can directly affect cellular processes the role of phospholipids in signal transduction mediators such as polyamines oligosaccharides and the cytoskeleton the mechanisms by which hormones and their second messengers affect gene expression and the hormonal control of various post transcriptional events This book will be of interest to biologists and those working in the field of molecular endocrinology
