Ontological Categories:

Ontological Categories Javier Cumpa, Erwin Tegtmeier, 2013-05-02 This volume is about ontological categories The categories of an ontology are designed to classify all existents They are crucial and characterize an ontology

Ontological Categories Jan Westerhoff, 2005-11-10 The concept of an ontological category is central to metaphysics Metaphysicians argue about which category an object should be assigned to whether one category can be reduced to another one or whether there might be different equally adequate systems of categorization Answers to these questions presuppose a clear understanding of what precisely an ontological category is an issue which is rarely addressed Jan Westerhoff presents the first in depth analysis both of the use made of ontological categories in the metaphysical literature and of various attempts at defining them He also develops a new theory of ontological categories which implies that there will be no unique system and that the ontological category an object belongs to is not an essential property of that object Systems of ontological categories are structures imposed on the world rather than reflections of a deep metaphysical reality already present All metaphysicians should find Westerhoff's book highly stimulating

On Determining What There is Paul Symington, 2013-05-02 Generally categories are understood to express the most general features of reality Yet since categories have this special status obtaining a correct list of them is difficult This question is addressed by examining how Thomas Aquinas establishes the list of categories through a technique of identifying diversity in how predicates are per se related to their subjects A sophisticated critique by Duns Scotus of this position is also examined a rejection which is fundamentally grounded in the idea that no real distinction can be made from a logical one It is argued Aquinas's approach can be rehabilitated in that real distinctions are possible when specifically considering per se modes of predication This discussion between Aquinas and Scotus bears fruit in a contemporary context insofar as it bears upon strengthens and seeks to correct E J Lowe's four category ontology view regarding the identity and relation of the categories

Ontological Categories Katarina Perovic, 2024-01-31

Ontology Makes Sense S. Borgo, R. Ferrario, C. Masolo, 2019-04-05 Nicola Guarino is widely recognized as one of the founders of applied ontology His deep interest in the subtlest details of theoretical analysis and his vision of ontology as the Rosetta Stone for semantic interoperability guided the development and understanding of this domain His motivations in research stem from the conviction that all science must be for the benefit of society at large and his motto has always been that ontologies are not just for making information systems interoperable but more importantly for ensuring that systems users understand each other He was among the first to recognize that applied ontology must be an interdisciplinary enterprise if it is to capture the intended meaning of the terms used by an information system This book is a collection of essays written in homage to Nicola Guarino a tribute to his many scientific contributions to the discipline of applied ontology The papers presented here reflect the wide variety of research topics that marked Nicola's impact on the applied ontology community They are grouped according to the five general areas addressed by Nicola in his career what is

an ontology knowledge engineering ontologies and language ontological categories and relationships and ontologies and applications Nicola Guarino's work and dedication will undoubtedly continue to influence the applied ontology community and this book will be of interest to the many researchers aiming to establish ontologically sound bases for their research areas

The Philosophy of Geo-Ontologies Timothy Tambassi, 2021-06-26 Placed at the intersection among philosophy geography and computer science the domain of investigation of applied ontology of geography ranges from making explicit assumptions and commitments of geography as a discipline to the theoretical and technical needs of geographical IT tools such as GIS and geo ontologies Such a domain of investigation represents the central topic of discussion of this book which intends 1 to provide an overview of the mutual interactions among the disciplines encompassed in the domain 2 to discuss notions such as spatial representation boundaries and geographical entities that constitute the main focus of the philosophical ontology of geography 3 to propose a geographical classification of geo ontologies in response to their increasing diffusion within the contemporary debate as well as to show what ontological categories best systematize their contents The second edition of the book differs from the first one as it offers a broader analysis of the philosophical ontology of geography an analysis that is no more limited to the theoretical need of geo ontologies

Ontological Categories Jan Westerhoff, 2007

Cognitive Foundations of Natural History Scott Atran, 1993-01-29 Inspired by a debate between Noam Chomsky and Jean Piaget this work traces the development of natural history from Aristotle to Darwin and demonstrates how the science of plants and animals has emerged from the common conceptions of folkbiology

Mereologies, Ontologies, and Facets Paul M. W. Hackett, 2018-07-15 The assignment events objects state of beings etc to an experiential category is a fundamental activity carried out by human and by other animals So rudimentary are the processes involved in categorizing that it is indeed impossible to imagine conscious awareness to exist without the presence of categories A considerable body of writing exists on categories dating from the times of Classical philosophy Plato developed a categorical ontology and Aristotle produced one of the earliest examples of a complex understanding of basic ontologies A number of other categorially structured ontologies have been proposed including those by Lowe Westerhoff Chisholm etc The book is an edited collection of up to the moment essays that address critical aspects on the understanding of categories and categorial systems The perspectives included in the book are drawn from philosophy psychology theology divinity comparative cognition and facet theory The authors are all renowned experts in the area of their writing Topics addressed include both contemporary advances in the understanding of perennial debates and latest thinking upon how categories are employed to structure our experiences of the world we live in The book is distinct as being written by philosophers and psychologists The book is a collection of writings from selected academics at the fore of debates and understandings of categories in contemporary thought The text provides a single source for contemporary scholarship in categories No single text that brings together expositions of categorial experiences for students and academics within the

above listed disciplines **The Cambridge Companion to Atheism** Michael Martin,2006-10-30 In this 2007 volume eighteen of the world s leading scholars present original essays on various aspects of atheism its history both ancient and modern defense and implications The topic is examined in terms of its implications for a wide range of disciplines including philosophy religion feminism postmodernism sociology and psychology In its defense both classical and contemporary theistic arguments are criticized and the argument from evil and impossibility arguments along with a non religious basis for morality are defended These essays give a broad understanding of atheism and a lucid introduction to this controversial topic

The International Handbook on Innovation Larisa V Shavinina,2003-10-16 The breadth of this work will allow the reader to acquire a comprehensive and panoramic picture of the nature of innovation within a single handbook The Fragmentation of Being Kris McDaniel,2017-07-28 The Fragmentation of Being offers answers to some of the most fundamental questions in ontology There are many kinds of beings but are there also many kinds of being The world contains a variety of objects each of which let us provisionally assume exists but do some objects exist in different ways Do some objects enjoy more being or existence than other objects Are there different ways in which one object might enjoy more being than another Most contemporary metaphysicians would answer no to each of these questions So widespread is this consensus that the questions this book addressed are rarely even raised let alone explicitly answered But Kris McDaniel carefully examines a wide range of reasons for answering each of these questions with a yes In doing so he connects these questions with many important metaphysical topics including substance and accident time and persistence the nature of ontological categories possibility and necessity presence and absence persons and value ground and consequence and essence and accident In addition to discussing contemporary problems and theories McDaniel also discusses the ontological views of many important figures in the history of philosophy including Aquinas Aristotle Descartes Heidegger Husserl Kant Leibniz Meinong and many more *Priority Nominalism* Guido Imaguire,2018-08-06 This monograph details a new solution to an old problem of metaphysics It presents an improved version of Ostrich Nominalism to solve the Problem of Universals This innovative approach allows one to resolve the different formulations of the Problem which represents an important meta metaphysical achievement In order to accomplish this ambitious task the author appeals to the notion and logic of ontological grounding Instead of defending Quine s original principle of ontological commitment he proposes the principle of grounded ontological commitment This represents an entirely new application of grounding Some metaphysicians regard Ostrich Nominalism as a rejection of the problem rather than a proper solution to it To counter this the author presents solutions for each of the formulations These include the problem of predication the problem of abstract reference and the One Over Many as well as the Many Over One and the Similar but Different variants This book will appeal to anyone interested in contemporary metaphysics It will also serve as an ideal resource to scholars working on the history of philosophy Many will recognize in the solution insights resembling those of traditional philosophers especially of the Middle Ages *The*

Four-Category Ontology E. J. Lowe, 2006 E J Lowe sets out and defends his theory of what there is His four category ontology is a metaphysical system that recognizes two fundamental categorial distinctions which cut across each other to generate four fundamental ontological categories The distinctions are between the particular and the universal and between the substantial and the non substantial The four categories thus generated are substantial particulars non substantial particulars substantial universals and non substantial universals Non substantial universals include properties and relations conceived as universals Non substantial particulars include property instances and relation instances otherwise known as non relational and relational tropes or modes Substantial particulars include property tied individuals the paradigm examples of which are persisting concrete objects Substantial universals are otherwise known as substantial kinds and include as paradigm examples natural kinds of persisting objects This ontology has a lengthy pedigree many commentators attributing it to Aristotle on the basis of certain passages in his apparently early work the *Categories* At various times during the history of Western philosophy it has been revived or rediscovered but it has never found universal favour perhaps on account of its apparent lack of parsimony as well as its commitment to universals In pursuit of ontological economy metaphysicians have generally preferred to recognize fewer than four fundamental ontological categories However Occam's razor stipulates only that we should not multiply entities beyond necessity Lowe argues that the four category ontology has an explanatory power unrivalled by more parsimonious systems and that this counts decisively in its favour He shows that it provides a powerful explanatory framework for a unified account of causation dispositions natural laws natural necessity and many other related matters such as the semantics of counterfactual conditionals and the character of the truthmaking relation As such it constitutes a thoroughgoing metaphysical foundation for natural science

Existence Peter van Inwagen, 2014-04-10 The problem of the nature of being was central to ancient and medieval philosophy and continues to be relevant today In this collection of thirteen recent essays Peter van Inwagen applies the techniques of analytical philosophy to a wide variety of problems in ontology and meta ontology Topics discussed include the nature of being the meaning of the existential quantifier ontological commitment recent attacks on metaphysics and ontology the concept of ontological structure fictional entities mereological sums and the ontology of mental states Van Inwagen adopts a generally Quinean position in meta ontology yet reaches ontological conclusions very different from Quine's The volume includes two previously unpublished essays one of which is an introductory essay where van Inwagen explains his conception of the relation between the language of the ordinary business of life and that of the ontology room The volume will be an important collection for students and scholars of metaphysics

The Meaning of Something Fosca Mariani Zini, 2022-11-09 This innovative volume investigates the meaning of something in different recent philosophical traditions in order to rethink the logic and the unity of ontology without forgetting to compare these views to earlier significative accounts in the history of philosophy In fact the revival of interest in something in the 19th and 20th centuries as well as in contemporary philosophy can easily be accounted for it

affords the possibility for asking the question what is there without engaging in predefined speculative assumptions The issue about something seems to avoid any naive approach to the question about what there is so that it is treated in two main contemporary philosophical trends material ontology which aims at taking inventory of what there is of everything that is and formal ontology which analyses the structural features of all there is whatever it is The volume advances cutting edge debates on what is the first et the most general item in ontology that is to say something because the relevant features of the conceptual core of something are non nothingness otherness Something means that one being is different from others The relationality belongs to something Therefore the volume advances cutting edge debates in phenomenology analytic philosophy formal and material ontology traditional metaphysics *The Non-existence of the Real World* Jan Westerhoff,2020 Does the real world defined as a world of objects that exist independent of human interests concerns and cognitive activities actually exist Jan Westerhoff argues that we have good reason to believe it does not He draws on the philosophy of Madhyamaka Buddhism but defends his stance in a Western philosophical framework The Oxford Handbook of Metaphysics Michael J. Loux,Dean W. Zimmerman,2005-09-08 Some of the world s specialists provide in this handbook essays about what kinds of things there are in what ways they exist and how they relate to each other They give the word on such topics as identity modality time causation persons and minds freedom and vagueness **The Analysis of Wonder** Predrag Cicovacki,2015-07-30 A concise introduction into the philosophy of Nicolai Hartmann 1882 1950 written in a way to stimulate further study and development of his thought **Analytic Theism** Joshua R. Sijuwade,2024-05-28 This book explores and develops a new philosophical argument for the existence of God from metaphysics It focuses on exploring the pressing questions of God s existence the truth of theistic belief and its relevance in modern philosophy In doing so it bridges the discussions and debates in the field of contemporary metaphysics with that of analytic philosophy of religion At its core metaphysics is dedicated to unveiling the fundamental structure of reality playing a critical role in any intellectual endeavour in the quest for truth However a noticeable gap has persisted between today s metaphysical conversations and the debates in analytic philosophy of religion especially regarding the topic of God s existence In this book the author embarks on a rigorous exploration presenting an innovative a posteriori argument for theism rooted in the latest evidence and theories from contemporary metaphysics The first part of the book details the explanatory framework of the analysis which is focused on introducing a new abductive methodology within metaphysics that provides a way for assessing the veracity of theism and the leading fundamental theories in contemporary metaphysics The second part of the book then focuses on demonstrating how the central concepts and theories within contemporary metaphysics such as quantum foundations four dimensionalism formal ontology essentialism grounding powerful causation mereology free will personhood and the reality of suffering are best explained by the existence of God and thus justify theism over that of the competing theories within contemporary metaphysics Theism is thus the best working metaphysical theory and should take a central place in

fundamental enquiries within the field of contemporary metaphysics and beyond Analytic Theism A Philosophical Investigation is a must read for scholars and advanced students venturing into philosophy of religion and metaphysics Beyond its appeal to those in analytic philosophy of religion and metaphysics this work also resonates with those immersed in contemporary philosophy on a whole and related fields of inquiry serving as a pivotal read for anyone keen on the intersections of philosophy theology and science
